facilities. One such issue was the inadvertent activation of Grinnell Model F-950 sprinkler heads. The Alert stated: ". . . in a series of incidents beginning in 1987 and culminating in the recent past, the Princeton Plasma Physics Laboratory and the Rocky Flats Environmental Technology Site collectively experienced 11 unexplained activations of Grinnell Model F-950 sprinkler heads in 9 different building areas. The heads were manufactured in 1978." This issue continues to affect DOE facilities as described in the following events.

On February 23, 2001, a Grinnell F-950 sprinkler head in Building 371 at Rocky Flats inadvertently actuated causing a release of 500 – 1,000 gallons of water that affected Rooms 2221, 2321, and adjacent areas and shorted out a criticality detector.[2] RFO-KHLL-3710PS-2001-0004 also cites another event that occurred on January 12, 2001, in which a Grinnell F-950 sprinkler head in Room 2203 of Building 371 inadvertently caused the release of approximately 40 gallons of water into the room. In addition to these, three other similar events at Rocky Flats have occurred since April 1997 described as follows:

- On April 10, 1997, an F-950 sprinkler inadvertently actuated in Room 1105 of Building 371, releasing an undetermined amount of water.[3]
- On June 12, 1997, an F-950 sprinkler head inadvertently actuated in Room 2022, releasing approximately 2,000 gallons of water.[4]
- On November 9, 2000, an F-950 sprinkler head inadvertently actuated in Room 2201, discharging an estimated 2,000 gallons of water onto the floor and on top of plenum units.[5]

A contractor engineering assessment team of subject matter experts submitted a technical report indicating that the failure rate clearly exceeds normal design expectations. The RFO-KHLL-3710PS-2001-0004 ORPS (Occurrence Reporting and Processing System) report states that a sample of nine unactuated Grinnell F-950 sprinkler heads taken from throughout the facility was evaluated by Factory Mutual Research Corporation (FMRC) following the first two abnormal failures in 1997. All nine tested heads passed a test described as "an accelerated aging test to determine if the sprinklers are likely to prematurely operate." In addition to the nine unactuated heads, two heads that had previously actuated inadvertently were sent to FMRC. FMRC evaluated the cause of their inadvertent actuation to be cold flow of the solder, that is, slow separation or creep of the solder. The ORPS report states that cold flow "could occur when the sprinkler was manufactured or while in storage prior to installation. Grinnell F-950 sprinklers manufactured in 1975 and between 1978 and 1982 have had a high number of premature operations, which typically indicate manufacturing defects."

Specific potential consequences for the Rocky Flats site from these inadvertent actuation events include damage to safety equipment, such as criticality detection systems and life safety disaster warning equipment. In general, such events disrupt operations and are a nuisance.

The latest inadvertent sprinkler actuation reported to ORPS happened at the National Energy Technology Laboratory on May 30, 2001. A Grinnell F-950 discharged in Building 83, Room 318, resulting in significant water damage ($15,000) to equipment, papers, and materials.[6]

In June 2001, a survey of the DOE fire safety community was conducted via the fire protection Listserv. This survey indicated that similar failures of Grinnell F-950 sprinkler heads have been noted at the Sandia National Laboratories, the Kansas City Plant, and the Paducah Gaseous Diffusion Plant.

[2] RFO-KHLL-3710PS-2001-0004
[3] RFO-KHLL-3710PS-1997-0031
[4] RFO-KHLL-3710PS-1997-0047
[5] RFO-KHLL-3710PS-2000-0065

In light of the above, the following actions are deemed prudent and should be considered as expeditiously as possible for potentially defective fire sprinklers that have either been addressed by CPSC or past DOE notices:

- Consider surveying all facilities protected by automatic sprinklers with the purpose of discovering the presence of any targeted fire sprinklers. It is suggested that all sprinkler make and model types in these facilities be documented, both to locate suspect sprinkler areas and to facilitate any future reliability concerns that may derive from either sprinkler manufacturers or CPSC or DOE. Concerning the Grinnell F-950 sprinkler, surveys should focus on identifying facilities and areas where water damage from inadvertent sprinkler actuation would be most vulnerable, such as nuclear facilities. The results of any survey should be reported to the appropriate DOE program and fire safety officials.

- Where recalled sprinklers are discovered, the process described by the CPSC to obtain replacements should be initiated. DOE contractors and non-contractor DOE field elements should consider interim compensatory activities in high-risk facilities, pending manufacturer replacements of recalled sprinklers.

- Where Grinnell F-950 sprinklers are discovered, the vulnerability and risks associated with the area should be weighed against the cost of replacement. The potential wetting of safety-related instrumentation, controls, or electrical equipment should be given priority evaluations. Pending replacement of sprinklers that are determined to be in highly vulnerable areas, interim compensatory (water damage prevention) measures should be implemented.

- All site fire protection system inspection, testing, and maintenance programs should be reviewed to assure they include routine exterior and interior inspections of sprinkler heads.

- The results of these activities should be shared with other organizations and individuals via the occurrence reporting system, as required, and within the DOE fire safety community via the fire protection Listserv, which is accessible from the DOE Fire Protection Home Page, located at: http://tis.eh.doe.gov/fire

Re: Visual Assessment Report (Draft)
Orange Coast College
1370 Adams Avenue
Buildings 7, 8 and 9
Costa Mesa, California 92626
Project Number 2014-1679PAG

Dear Mr. Gorski:

Omega Environmental Services, Inc. (Omega) is pleased to provide the following hazardous materials visual assessment report of potential hazardous materials at buildings 7, 8 and 9 located at the Orange Coast College in Costa Mesa, California.

Project Summary

Omega was requested to conduct a review of previous asbestos-containing materials (ACMs) survey reports and perform a Walk-Through Visual Assessment of buildings 7, 8 and 9. The purpose of this limited visual assessment was to evaluate the presence of potential hazardous materials at the interior and exterior of the subject buildings including; ACMs, lead-based paint (LBP), polychlorinated biphenyls (PCBs) in light fixtures ballasts, mercury vapor in light tubes, floor drain, hydrochlorofluorocarbon (HCFC) in heating, ventilation and air conditioning system (HVAC), exit signs for the presence of tritium gas, suspect mold growth and other miscellaneous and potential hazardous materials.

Asbestos Survey Report Review

A review of the previous asbestos survey report prepared by Patriot Environmental Laboratory Services, Inc., dated March 28, 2005 (Project #19378 and #19379), revealed that ACMs were identified in the following materials:

Table 1
Building 7 – Student Success Center/Library

Material Description	Sample Location
Window putty	Exterior
Leveling compound	Custodial closet
Linoleum flooring (brown)	Exterior telephone room near sliding door

Table 2
Building 8 – Classroom and Laboratory

Material Description	Sample Location
Vinyl floor tile (tan)	Rooms 108 & 109, under carpet
Vinyl floor tile (gray) and associated mastic	Room 104

Table 3
Building 9 – Classroom and Lab

Material Description	Sample Location
Vinyl floor tile (tan)	Throughout building, under carpet
Transite pipe	Exterior electrical room

Observations

Omega's observations and findings summarized as follows: The subject buildings are currently occupied and used as library, classrooms, laboratory and offices. The buildings interior consisted of painted drywalls, vinyl floor tiles under carpet and a combination of dropped ceiling tiles and ceiling panels. The laboratory consisted of vinyl tile under carpet and suspect asbestos-containing counter tops. The exterior walls are a mixture of concrete, brick and glass. The HVAC packaged units are located on the roof areas.

Generally the materials were in a good condition throughout the interior and exterior of the buildings.

Attachment A includes photographs of the general building materials and condition at the time of site visit. Based on the visual observations made during the limited assessment it is Omega's professional opinion that the following potentially hazardous materials may be present in the subject buildings:

<u>Building 7 – Student Success Center</u>

- Asbestos-containing material (ACM)
  - 1'x1' acoustic ceiling tile with associated mastic
  - 2'x4' acoustic ceiling tile
  - Drywall and joint compound with rough texture
  - Vinyl base cove mastic
  - Carpet mastic
  - Vinyl floor covering (12" x12" tiles) and associated mastic

- Fireproofing on structural members
- Grout
- Insulation, registered
- Exterior Window putty
- Exterior paint/skim coat
- Exterior stucco
- Concrete
- Exterior concrete expansion joints
- Exterior sub-surface transite pipes
- Roofing material
- Roof mastic
- HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Ceramic tiles
  - Toilet bowls, Sinks & Urinals
  - Floor drain
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 8 – Classroom & Laboratory

- Asbestos-containing material (ACM)
  - 2’x4’ acoustic ceiling tiles
  - Drywall and joint compound
  - Vinyl base cove and mastic
  - Carpet mastic
  - Vinyl floor covering (12” x12” tiles) and associated mastic
  - Vinyl sheet flooring
  - Counter top
  - Mastic under sink
  - Transite panels

  - Exterior Window putty
  - Exterior stucco
  - Exterior paint/skim coat
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Floor drain
  - Painted structural columns and beams
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 9 – Classroom and Laboratory

- Asbestos-containing material (ACM)
  - 2'x4' acoustic ceiling tiles
  - Drywall and joint compound
  - Vinyl base cove and mastic
  - Carpet mastic
  - Vinyl floor covering (12" x12" tiles) and associated mastic
  - Vinyl sheet flooring
  - Counter top
  - Mastic under sink
  - Transite panels
  - Exterior Window putty
  - Exterior stucco
  - Exterior paint/skim coat
  - Concrete

  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Floor drain
  - Painted structural columns and beams
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Conclusions and Recommendations
Based on the limited visual assessment of the subject buildings and the identified potentially hazardous materials listed above, Omega recommends the following:

- A thorough survey and sampling assessment for the identified potentially hazardous materials is recommended to identify and evaluate actual hazardous materials that may exist in the subject buildings.
- If the materials identified in the previous survey[1] will be removed or impacted during renovation or demolition activities, a California licensed asbestos contractor, prior to any demolition and or renovation activities shall remove the ACMs and or ACCM from the subject buildings.

- Personnel in charge of renovation or demolition should be alerted to note materials uncovered during these activities, unidentified hazardous materials may be hidden within the walls, sub-floors, ceiling cavities or inaccessible areas.

1 See asbestos survey report, Attachment B

Limitations

This assessment was limited to visually accessible areas. The conclusions of this assessment and the opinions expressed herein are based upon visual observations of the specific areas, a review of on site conditions and the limitations of the approved scope of services described in the proposal. The items discussed in this report are subject to revision as more information becomes available.

All observations are not static conditions. Visual observations are limited in their representation of the conditions at the time of the visual assessment. Omega expects that many conditions may worsen without proper characterization and remediation efforts and new conditions may arise.

Our services consist of professional opinions, conclusions, and recommendations that are made in accordance with generally accepted consulting standards, principles, and practices. Reasonable attempts have been made to ensure that the report is complete and accurate with respect to Omega's authorized scope of investigation. Omega assumes no liability for damages, which might result from errors contained in the report or conditions, which the report fails to disclose. The potential hazardous materials noted in the report might be more severe than indicated and other conditions may exist.

Omega appreciates the opportunity to provide this service to Page and Turnbull. Please call me if you have any questions or require additional assistance.

Sincerely,

Steve Rosas
Principal
Omega Environmental Services, Inc.

Re: Visual Assessment Report (Draft)
Orange Coast College
1370 Adams Avenue
Buildings 12, 13 and 14
Costa Mesa, California 92626
Project Number 2014-1679PAG

Dear Mr. Gorski:

Omega Environmental Services, Inc. (Omega) is pleased to provide the following hazardous materials visual assessment report of potential hazardous materials at buildings 12, 13 and 14 located at the Orange Coast College in Costa Mesa, California.

Project Summary

Omega was requested to conduct a review of previous asbestos-containing materials (ACMs) survey reports and perform a Walk-Through Visual Assessment of buildings 12, 13 and 14. The purpose of this limited visual assessment was to evaluate the presence of potential hazardous materials at the interior and exterior of the subject buildings including; ACMs, lead-based paint (LBP), polychlorinated biphenyls (PCBs) in light fixtures ballasts, mercury vapor in light tubes, floor drain, hydrochlorofluorocarbon (HCFC) in heating, ventilation and air conditioning system (HVAC), exit signs for the presence of tritium gas, suspect mold growth and other miscellaneous and potential hazardous materials.

Asbestos Survey Report Review

A review of the previous asbestos survey report prepared by Patriot Environmental Laboratory Services, Inc., dated March 28, 2005 (Project #19378 and #19379), revealed that ACMs and asbestos-containing construction materials (ACCMs) were identified in the following materials:

Table 1
Building 12 – Business Education Wing

Material Description	Sample Location
Window putty	Exterior
Transite pipe	Utility closet
9” gray vinyl floor tile & mastic	Exterior custodial closet at room 104
Flooring bullnose	Exterior custodial closet at room 104
Flooring mastic	Room 103, under carpet
Tan vinyl floor tile & mastic	Rooms 101A & 101B

Table 2
Building 13 – Business Education Wing

Material Description	Sample Location
Window putty	Exterior

Table 3
Building 14 – Business Education Wing

Material Description	Sample Location
Wallboard (<1%)	Throughout building
HVAC duct seam tape	Exterior telephone/HVAC room
HVAC duct vibration gasket	Exterior telephone/HVAC room

Observations
Omega's observations and findings summarized as follows: The subject buildings are currently occupied and used as classrooms and offices. The interior of the buildings consisted of painted drywalls, vinyl floor tiles under carpet, 2'x4' suspended ceiling tiles, and 1'x1' acoustic ceiling tiles with associated mastic and fireproofing on structural members above the ceiling system. The restrooms located outside building 14 contain ceramic tiles on floor and walls. The exterior walls are a mixture of concrete, brick and glass. The HVAC packaged units are located on the roof areas.

Generally the materials were in a good condition throughout the interior and exterior of the buildings.

Attachment A includes photographs of the general building materials and condition at the time of site visit. Based on the visual observations made during the limited assessment it is Omega's professional opinion that the following potentially hazardous materials may be present in the subject buildings:

Building 12 – Business Education Wing

- Asbestos-containing material (ACM)
  - 1'x1' acoustic ceiling tile with associated mastic
  - 2'x4' acoustic ceiling tile
  - Drywall and joint compound
  - Transite panels
  - Vinyl base cove mastic
  - Carpet mastic
  - Vinyl floor tile and associated mastic
  - Exterior grout
  - Insulation, registered
  - Exterior Window putty
  - Exterior paint/skim coat
  - Exterior stucco

- Concrete
- Exterior concrete expansion joints
- Exterior sub-surface transite pipes
- Roofing material
- Roof mastic
- HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

<u>Building 13 – Business Education Wing</u>

- Asbestos-containing material (ACM)
  - 1’x1’ acoustic ceiling tile with associated mastic
  - 2’x4’ acoustic ceiling tile
  - Drywall and joint compound
  - Transite panels
  - Vinyl base cove mastic
  - Carpet mastic
  - Vinyl floor tile and associated mastic
  - Exterior grout
  - Insulation, registered
  - Exterior Window putty
  - Exterior paint/skim coat
  - Exterior stucco
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 14 – Business Education Wing

- Asbestos-containing material (ACM)
  - 1’x1’ acoustic ceiling tile with associated mastic
  - 2’x4’ acoustic ceiling tile
  - Drywall and joint compound
  - Transite panels
  - Vinyl base cove mastic
  - Carpet mastic
  - Vinyl floor tile and associated mastic
  - Exterior grout
  - Insulation, registered
  - Exterior Window putty
  - Exterior paint/skim coat
  - Exterior stucco
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Exterior Restrooms

- Asbestos-containing material (ACM)
  - Ceiling system

- Lead based paints (LBP)
  - Painted door and frames
  - Ceramic tiles
  - Sinks, Toilet bowls and Urinals

- Mercury
  - Fluorescent light bulbs

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)

Conclusions and Recommendations

Based on the limited visual assessment of the subject buildings and the identified potentially hazardous materials listed above, Omega recommends the following:

- A thorough survey and sampling assessment for the identified potentially hazardous materials is recommended to identify and evaluate actual hazardous materials that may exist in the subject buildings.
- If the materials identified in the previous survey report[1] will be removed or impacted during renovation or demolition activities, a California licensed asbestos contractor, prior to any demolition and or renovation activities shall remove the ACMs and or ACCM from the subject buildings.

[1] See asbestos survey report, Attachment B

- Personnel in charge of renovation or demolition should be alerted to note materials uncovered during these activities, unidentified hazardous materials may be hidden within the walls, sub-floors, ceiling cavities or inaccessible areas.

Limitations

This assessment was limited to visually accessible areas. The conclusions of this assessment and the opinions expressed herein are based upon visual observations of the specific areas, a review of on site conditions and the limitations of the approved scope of services described in the proposal. The items discussed in this report are subject to revision as more information becomes available.

All observations are not static conditions. Visual observations are limited in their representation of the conditions at the time of the visual assessment. Omega expects that many conditions may worsen without proper characterization and remediation efforts and new conditions may arise.

Our services consist of professional opinions, conclusions, and recommendations that are made in accordance with generally accepted consulting standards, principles, and practices. Re: Visual Assessment Report (Draft)
Orange Coast College
1370 Adams Avenue
Buildings 2 and 4
Costa Mesa, California 92626
Project Number 2014-1679PAG

Dear Mr. Gorski:

Omega Environmental Services, Inc. (Omega) is pleased to provide the following hazardous materials visual assessment report of potential hazardous materials at buildings 2 and 4 located at the Orange Coast College in Costa Mesa, California.

Project Summary
Omega was requested to conduct a review of previous asbestos-containing materials (ACMs) survey reports and perform a Walk-Through Visual Assessment of buildings 2 and 4. The purpose of this limited visual assessment was to evaluate the presence of potential hazardous materials at the interior and exterior of the subject buildings including; ACMs, lead-based paint (LBP), polychlorinated biphenyls (PCBs) in light fixtures ballasts, mercury vapor in light tubes, floor drain, hydrochlorofluorocarbon (HCFC) in heating, ventilation and air conditioning system (HVAC), exit signs for the presence of tritium gas, suspect mold growth and other miscellaneous and potential hazardous materials.

Asbestos Survey Report Review
A review of the previous asbestos survey report prepared by Patriot Environmental Laboratory Services, Inc., dated March 28, 2005 (Project #19378 and #19379), indicate that the subject buildings were excluded from the survey.

Observations

Omega's observations and findings summarized as follows: Building number 2 (Robert B. Moore Theatre) is currently used as a Theatre consisting of auditorium, stage area, mezzanine, mechanical room and catwalk area. The building interior consisted of painted drywalls, carpet and ceiling panels. The restrooms consisted of ceramic tiles on walls and floor, and plaster ceiling materials.

Building number 4 (Music wing) is currently used as classrooms. The building interior consisted of painted drywalls, vinyl sheet flooring, and carpet and dropped ceiling tiles.

The exterior walls are a mixture of concrete and brick. The HVAC packaged units are located on the roof areas. Generally the materials were in a good condition throughout the interior and exterior of the buildings.

Attachment A includes photographs of the general building materials and condition at the time of site visit. Based on the visual observations made during the limited assessment it is Omega's professional opinion that the following potentially hazardous materials may be present in the subject buildings:

<u>Building 2 – Robert B. Moore Theatre</u>

- Asbestos-containing material (ACM)
  - Painted ceiling materials
  - Drywall and joint compound
  - Vinyl base cove and mastic
  - Carpet mastic
  - Exterior and interior stucco materials
  - Exterior paint/skim coat
  - Concrete
  - Plaster
  - Stage curtains
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Expansion joint
  - Roofing material
  - Roof mastic
  - Insulation
  - HVAC system components
  - Pipe insulation
  - Transite pipe

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Painted structural columns and beams

- Roof systems (fascia, eves, gutters, etc.)
- Exterior painted walls

• Mercury
  - Fluorescent light bulbs

• Hydrochlorofluorocarbon (HCFC)
  - HVAC system

• Tritium gas
  - Exit sign

• Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Transformers
  - Expansion joint

Building 4 – Music Wing

• Asbestos-containing material (ACM)
  - 2’x4’ acoustic ceiling tile
  - 2’x2’ acoustic ceiling tile
  - Drywall and joint compound
  - Carpet glue
  - Vinyl base cove and mastic
  - Sheet vinyl flooring
  - Vinyl floor covering (12” x12” tiles) and associated mastic
  - Exterior stucco
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components

• Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Painted structural columns and beams
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls
  - Ceramic tiles

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Tritium gas
  - Exit sign

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking

<u>Mechanical Room</u>

- Asbestos-containing material (ACM)
  - Plaster materials
  - Pipe insulation
  - Mastic

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)

- Mercury
  - Fluorescent light bulbs

Conclusions and Recommendations

Based on the limited visual assessment of the subject buildings and the identified potentially hazardous materials listed above, Omega recommends the following:

- A thorough survey and sampling assessment for the identified potentially hazardous materials is recommended to identify and evaluate actual hazardous materials that may exist in the subject buildings.

- Exit signs, light bulbs and ballast shall be inspected prior to demolition or renovation of the building and properly removed, packaged, labeled, manifested and transported to an EPA approved facility for recycling or proper disposal.

Limitations

This assessment was limited to visually accessible areas. The conclusions of this assessment and the opinions expressed herein are based upon visual observations of the specific areas, a review of on site conditions and the limitations of the approved scope of services described in the proposal. The items discussed in this report are subject to revision as more information becomes available.

All observations are not static conditions. Visual observations are limited in their representation of the conditions at the time of the visual assessment. Omega expects that many conditions may worsen without proper characterization and remediation efforts and new conditions may arise.

Our services consist of professional opinions, conclusions, and recommendations that are made in accordance with generally accepted consulting standards, principles, and practices. Reasonable attempts have been made to ensure that the report is complete and accurate with respect to Omega's authorized scope of investigation. Omega assumes no liability for damages, which might result from errors contained in the report or conditions, which the report fails to disclose. The potential hazardous materials noted in the report might be more severe than indicated and other conditions may exist.

Omega appreciates the opportunity to provide this service to Page and Turnbull. Please call me if you have any questions or require additional assistance.

Sincerely,

Steve Rosas
Principal
Omega Environmental Services, Inc.

Re: Visual Assessment Report (Draft)
Orange Coast College
1370 Adams Avenue
Buildings 35-39
Costa Mesa, California 92626
Project Number 2014-1679PAG

Dear Mr. Gorski:

Omega Environmental Services, Inc. (Omega) is pleased to provide the following hazardous materials visual assessment report of potential hazardous materials at buildings 35, 36, 37, 38 and 39 located at the Orange Coast College in Costa Mesa, California.

Project Summary
Omega was requested to conduct a review of previous asbestos-containing materials (ACMs) survey reports and perform a Walk-Through Visual Assessment of buildings 35 through 39. The purpose of this limited visual assessment was to evaluate the presence of potential hazardous materials at the interior and exterior of the subject buildings including; ACMs, lead-based paint (LBP), polychlorinated biphenyls (PCBs) in light fixtures ballasts, mercury vapor in light tubes, floor drain, hydrochlorofluorocarbon (HCFC) in heating, ventilation and air conditioning system (HVAC), exit signs for the presence of tritium gas, suspect mold growth and other miscellaneous and potential hazardous materials.

Asbestos Survey Report Review
A review of the previous asbestos survey report prepared by Patriot Environmental Laboratory Services, Inc., dated March 28, 2005 (Project #19378 and #19379), revealed that ACMs and asbestos-containing construction materials (ACCMs) were identified in the following materials:

Table 1
Building 35 – Math Wing

Material Description	Sample Location
Vinyl floor tile and associated mastic	Rooms 149 & 150 under carpet
9” vinyl floor tile and associated mastic	Rooms 151 & 155
Flooring mastic	Room 154, under carpet

Table 2
Building 36 – Math Wing

Material Description	Sample Location
Window putty	Exterior
Beige vinyl floor tile and associated mastic	Room 144-under carpet
Plaster	Throughout Bldg.
12” white w/brown vinyl floor tile and associated mastic	Room 148 & lab prep area

Table 3
Building 37 – Reprographics Center

Material Description	Sample Location
TSI pipe insulation & pipe elbows	Attic
Tan floor tile debris	Crawlspace at room 168
TSI pipe insulation & pipe elbows (Multiple sixes)	Utility room at Men’s restroom
HVAC duct vibration gasket	Utility room at Men’s restroom
Ceiling tile debris	Crawlspace at room 168
Vinyl floor tile and associated mastic	Rooms 168 & 169 – under carpet
Vinyl floor tile and associated mastic	Rooms 162, 163 & 164 – under carpet

Table 4
Building 39 - Planetarium

Material Description	Sample Location
Tan vinyl floor tile	Throughout building under carpet
Wallboard (<1%)	Throughout building

Observations

Omega’s observations and findings summarized as follows: The subject buildings are currently occupied and used as classrooms, laboratories and offices. The buildings interior consisted of painted drywalls, vinyl floor tiles under carpet and a combination of dropped ceiling tiles and ceiling panels. The restrooms consisted of ceramic tiles on walls and floor, and plaster ceiling materials. The exterior walls are a mixture of concrete, brick and glass. The HVAC packaged units are located on the roof areas.

Generally the materials were in a good condition throughout the interior and exterior of the buildings, however wall damage was noted in the mechanical room at the time of the site visit.

Attachment A includes photographs of the general building materials and condition at the time of site visit. Based on the visual observations made during the limited assessment it is Omega's professional opinion that the following potentially hazardous materials may be present in the subject buildings:

Building 35 – Math Wing

- Asbestos-containing material (ACM)
  - 1'x1' acoustic ceiling tile with associated mastic
  - Drywall and joint compound with rough texture
  - Vinyl base cove and mastic
  - Carpet mastic
  - Vinyl floor covering (12" x12" tiles) and associated mastic
  - Exterior Window putty
  - Exterior stucco
  - Exterior paint/skim coat
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components
  - Pipe insulation in Mechanical rooms

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Painted structural columns and beams
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 36 – Math Wing

- Asbestos-containing material (ACM)
  - 1’x1’ acoustic ceiling tile with associated mastic
  - Drywall and joint compound with rough texture
  - Vinyl base cove and mastic
  - Carpet mastic
  - Vinyl floor covering (12” x12” tiles) and associated mastic
  - Exterior Window putty
  - Exterior stucco
  - Exterior paint/skim coat
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Painted structural columns and beams
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 37 – Reprographics Center

- Asbestos-containing material (ACM)
  - 2’x4’ ceiling tile
  - 1’x1’ ceiling tile with associated mastic
  - Drywall and joint compound
  - Vinyl base cove and mastic
  - Carpet mastic
  - Vinyl floor covering and associated mastic

- Exterior Window putty
- Exterior stucco
- Exterior paint/skim coat
- Concrete
- Exterior concrete expansion joints
- Exterior sub-surface transite pipes
- Pipe insulation
- Roofing material
- Roof mastic
- HVAC system components

• Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Wall and floor ceramic tiles
  - Urinals, toilet bowls and sinks
  - Painted structural columns and beams
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

• Mercury
  - Fluorescent light bulbs

• Hydrochlorofluorocarbon (HCFC)
  - HVAC system

• Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 38 – Science

• Asbestos-containing material (ACM)
  - 1’x1’ ceiling tile with associated mastic
  - Drywall and joint compound with rough texture
  - Vinyl base cove and mastic
  - Carpet mastic
  - Vinyl floor covering (12” x12” tiles) and associated mastic
  - Exterior Window putty
  - Exterior stucco
  - Exterior paint/skim coat
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes

  - Roofing material
  - Roof mastic
  - HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Wall and floor ceramic tiles
  - Urinals, toilet bowls and sinks
  - Painted structural columns and beams
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 39 – Planetarium

- Asbestos-containing material (ACM)
  - 1'x1' ceiling tile with associated mastic
  - Spray-on acoustic ceiling materials
  - Drywall and joint compound with rough texture
  - Vinyl base cove and mastic
  - Carpet mastic
  - Vinyl floor covering (12" x12" tiles) and associated mastic
  - Exterior Window putty
  - Exterior stucco
  - Exterior paint/skim coat
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic
  - HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems

- Painted wall surfaces
- Wall and floor ceramic tiles
- Urinals, toilet bowls and sinks
- Painted structural columns and beams
- Roof systems (fascia, eves, gutters, etc.)
- Exterior painted walls
- Floor drains

• Mercury
  - Fluorescent light bulbs

• Hydrochlorofluorocarbon (HCFC)
  - HVAC system

• Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Mechanical Room

• Asbestos-containing material (ACM)
  - Plaster materials (wall/ceiling)
  - Pipe insulation
  - Mastic
  - Debris

• Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces

• Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)

• Mercury
  - Fluorescent light bulbs

During the visual assessment of building 39, caution signs denoting radioactive materials were observed. These areas were not inspected.

Conclusions and Recommendations

Based on the limited visual assessment of the subject buildings and the identified potentially hazardous materials listed above, Omega recommends the following:

- A thorough survey and sampling assessment for the identified potentially hazardous materials is recommended to identify and evaluate actual hazardous materials that may exist in the subject buildings.
- If the materials identified in the previous asbestos survey report[1] will be removed or impacted during renovation or demolition activities, a California licensed asbestos contractor, prior to any demolition and or renovation activities shall remove the ACMs and or ACCM from the subject buildings.

- Personnel in charge of renovation or demolition should be alerted to note materials uncovered during these activities, unidentified hazardous materials may be hidden within the walls, sub-floors, ceiling cavities or inaccessible areas.

Limitations

This assessment was limited to visually accessible areas. The conclusions of this assessment and the opinions expressed herein are based upon visual observations of the specific areas, a review of on site conditions and the limitations of the approved scope of services described in the proposal. The items discussed in this report are subject to revision as more information becomes available.

All observations are not static conditions. Visual observations are limited in their representation of the conditions at the time of the visual assessment. Omega expects that many conditions may worsen without proper characterization and remediation efforts and new conditions may arise.

Our services consist of professional opinions, conclusions, and recommendations that are made in accordance with generally accepted consulting standards, principles, and practices. Reasonable attempts have been made to ensure that the report is complete and accurate with respect to Omega's authorized scope of investigation. Omega assumes no liability for damages, which might result from errors contained in the report or conditions, which the report fails to disclose. The potential hazardous materials noted in the report might be more severe than indicated and other conditions may exist.

Omega appreciates the opportunity to provide this service to Page and Turnbull. Please call me if you have any questions or require additional assistance.

Sincerely,

Steve Rosas
Principal

Re: Visual Assessment Report (Draft)
Orange Coast College
1370 Adams Avenue
Buildings 93, 105 and 110
Costa Mesa, California 92626
Project Number 2014-1679PAG

Dear Mr. Gorski:

Omega Environmental Services, Inc. (Omega) is pleased to provide the following hazardous materials visual assessment report of potential hazardous materials at buildings 93, 105 and 110 located at the Orange Coast College in Costa Mesa, California.

Project Summary

Omega was requested to conduct a review of previous asbestos-containing materials (ACMs) survey reports and perform a Walk-Through Visual Assessment of buildings 93, 105 and 110. The purpose of this limited visual assessment was to evaluate the presence of potential hazardous materials at the interior and exterior of the subject buildings including; ACMs, lead-based paint (LBP), polychlorinated biphenyls (PCBs) in light fixtures ballasts, mercury vapor in light tubes, floor drain, hydrochlorofluorocarbon (HCFC) in heating, ventilation and air conditioning system (HVAC), exit signs for the presence of tritium gas, suspect mold growth and other miscellaneous and potential hazardous materials.

Asbestos Survey Report Review

A review of the previous asbestos survey report prepared by Patriot Environmental Laboratory Services, Inc., dated March 28, 2005 (Project #19378 and #19379), revealed that ACMs were identified in the following materials:

Table 1
Building 93 – Pool Stadium

Material Description	Sample Location
Pipe insulation	Pool equipment room at bleachers
Pipe elbows	Pool equipment room at bleachers

Table 2
Building 110 – Field House

Material Description	Sample Location
Transite panels	Exterior at doors and windows
Transite panels	Electrical rooms at south restrooms
TSI - pipe insulation, all sizes	Exterior boiler room
TSI – pipe elbows 8" (ELB)	Exterior boiler room
TSI – pipe insulation 4" (P/C)	Exterior boiler room
HVAC duct seam tape (TAP)	Exterior boiler room
T.S.I. – boiler tank insulation	Exterior boiler room
Woven materials at tank	Exterior boiler room
10" transite pipe	Exterior boiler room

Observations

Omega's observations and findings summarized as follows: Building 93 is currently used as a swimming pool with suspect lead containing paint. During the visual assessment five-gallons buckets were noted marked as Hypochlorite, which is used as cleaning solution. The materials were located in a locked area under the bleachers.

Building 105 is a stadium with mostly suspect lead and ACMs at the press boxes. Building 110 is used as offices with restrooms, storage and equipment room. The interior of building 110 consisted of painted drywalls, carpet and wood ceiling. The exterior walls are stucco, wood and transite panels. The HVAC packaged units are located on the roof area.

Generally the materials were in a good condition throughout the interior and exterior of the buildings at the time of the site visit.

Attachment A includes photographs of the general building materials and condition at the time of site visit. Based on the visual observations made during the limited assessment it is Omega's professional opinion that the following potentially hazardous materials may be present in the subject buildings:

Building 93 – Pool Stadium

- Asbestos-containing material (ACM)
  - Pipe insulation
  - Elbows
  - Mastic
  - Grout
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes

- Lead based paints (LBP)
  - Painted floor

  - Painted wall surfaces and handrails
  - Ceramic tiles

- Mercury
  - Fluorescent light bulbs

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking

- Miscellaneous Materials
  - Hypochlorite

Building 105 – Stadium

- Asbestos-containing material (ACM)
  - Drywall and joint compound
  - Transite panels
  - Exterior Window putty
  - Exterior stucco
  - Exterior paint/skim coat
  - Concrete
  - Exterior concrete expansion joints
  - Exterior sub-surface transite pipes
  - Roofing material
  - Roof mastic

- Lead based paints (LBP)
  - Painted wood members
  - Painted wall surfaces
  - Painted handrails and posts

- Mercury
  - Fluorescent light bulbs

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Building 110 – Field House

- Asbestos-containing material (ACM)
  - Acoustic ceiling tiles
  - Drywall and joint compound

- Vinyl base cove and mastic
- Carpet mastic
- Transite panels
- Pipe insulation
- Tank insulation
- Exterior Window putty
- Exterior stucco
- Exterior paint/skim coat
- Concrete
- Exterior concrete expansion joints
- Exterior sub-surface transite pipes
- Roofing material
- Transite pipes
- Roof mastic
- HVAC system components

- Lead based paints (LBP)
  - Painted door and window systems
  - Painted wall surfaces
  - Floor drain
  - Painted wood ceiling
  - Roof systems (fascia, eves, gutters, etc.)
  - Exterior painted walls
  - Painted concrete floor
  - Sinks, Toilet bowls and Urinals
  - Ceramic tiles

- Mercury
  - Fluorescent light bulbs

- Hydrochlorofluorocarbon (HCFC)
  - HVAC system

- Polychlorinated biphenyls (PCB)
  - Ballast (fluorescent fixtures)
  - Concrete expansion joint caulking
  - Window caulking

Conclusions and Recommendations
Based on the limited visual assessment of the subject buildings and the identified potentially hazardous materials listed above, Omega recommends the following:

- A thorough survey and sampling assessment for the identified potentially hazardous materials is recommended to identify and evaluate actual hazardous materials that may exist in the subject buildings.
- If the materials identified in the previous survey report[1] will be removed or impacted during renovation or demolition activities, a California licensed asbestos contractor, prior to any demolition and or renovation activities shall remove the ACMs and or ACCM from the subject buildings.
- Personnel in charge of renovation or demolition should be alerted to note materials uncovered during these activities, unidentified hazardous materials may be hidden within the walls, sub-floors, ceiling cavities or inaccessible areas.
- It may be necessary to contain and dispose of Sodium Hypochlorite as a hazardous waste, in accordance with the federal, state and local requirements.

Limitations

This assessment was limited to visually accessible areas. The conclusions of this assessment and the opinions expressed herein are based upon visual observations of the specific areas, a review of on site conditions and the limitations of the approved scope of services described in the proposal. The items discussed in this report are subject to revision as more information becomes available.

All observations are not static conditions. Visual observations are limited in their representation of the conditions at the time of the visual assessment. Omega expects that many conditions may worsen without proper characterization and remediation efforts and new conditions may arise.

Our services consist of professional opinions, conclusions, and recommendations that are made in accordance with generally accepted consulting standards, principles, and practices. Reasonable attempts have been made to ensure that the report is complete and accurate with respect to Omega's authorized scope of investigation. Omega assumes no liability for damages, which might result from errors contained in the report or conditions, which the report fails to disclose. The potential hazardous materials noted in the report might be more severe than indicated and other conditions may exist.

Omega appreciates the opportunity to provide this service to Page and Turnbull. Please call me if you have any questions or require additional assistance.

Asbestos Survey Report

PATRIOT
ENVIRONMENTAL
LABORATORY SERVICES

Asbestos Survey

District Offices, Orange Coast College & Golden West College

March 28, 2005

Prepared by:

Patriot Environmental Laboratory Services, Inc.
7271 Garden Grove Boulevard, Suite A
Garden Grove, CA 92841

Project # 19378 & 19379

Prepared for:

Coast Community College District
Environmental Health and Safety
1370 Adams Avenue Bldg. D, Costa Mesa, CA 92626

TABLE OF CONTENTS

EXECUTIVE SUMMARY

Beginning December 6, 2004 thru March 23, 2005, Mr. Erik Paquette of Patriot Environmental Laboratory Services, Inc. (Patriot) performed an asbestos survey for the Environmental Health and Safety Department of the Coast Community College District. The areas surveyed included all specified buildings of Golden West College, Orange Coast College and the District Office locations on the property from attic to basement. The survey did not include building materials on the roof including any roofing materials. The survey also did not include buildings specified by our client at the Orange Coast College Site (Buildings: 2, 3, 4, 147,158, 169, 162, 146, 155, 114, 115, 116, 156, 170, 121, 171, 172, Watson Hall and Weight Room), District Office Site (Buildings: B, C, D) and the Golden West College Site (Buildings: 8, 14, 21, 17)(See attached site plans for building names and numbers). Inspection, sampling and analytical procedures were performed in general accordance with the Environmental Protection Agency's interpretations, and guidelines of, the Asbestos Hazard Emergency Response Act (AHERA). All bulk samples collected were analyzed by Patriot's NVLAP accredited laboratory.

Asbestos was identified in representative samples collected from Golden West College, Orange Coast College and the District Offices of the Coast Community College Property.

Asbestos containing materials as defined by the EPA are materials with an asbestos concentration of greater than 1% (>1%). For worker protection, CAL-OSHA defines materials with a concentration of one-tenth of one percent of asbestos or greater (>0.1%) as asbestos containing. This survey identified any building material with an asbestos concentration greater than 0.1% by weight. A complete listing of suspect materials, sampled materials and the analytical results can be found in the text portion of the report. Coast Community College District site maps were used for building number identification. (See Appendix B)

*Laboratory analytical data sheets should be reviewed for potential asbestos content within individual layers of a sample for each material. Analysis of an individual layer of a material may exceed 1% while the composite analysis of the material as a whole is below 1%. Laboratory analytical data sheets are presented within Appendix A.

If you have any comments or questions concerning the information presented in the report or attachments, or if we may be of additional service, please contact our office at (714) 899-8900.

Sincerely,

Patriot Environmental Laboratory Services, Inc.

Certified Asbestos Consultant No. 94-1339

INTRODUCTION

A comprehensive AHERA based asbestos survey was performed for the Environmental Health and Safety Department of the Coast Community College District at Golden West College in Huntington Beach, Orange Coast College in Costa Mesa and the District Offices in Costa Mesa, California from December 6, 2004 thru March 23, 2005 by Patriot Environmental Laboratory Services, Inc (Patriot). The survey encompassed all buildings unless specified by our client of the Coast Community College District properties located at: 1370 Adams Avenue & 2701 Fairview Road in Costa Mesa, California as well as 15744 Golden West Street in Huntington Beach, California. The survey did not include building materials on the roof including any roofing materials.

The AHERA accredited and State of California certified building inspector representative that performed this asbestos survey for Patriot was Erik Paquette (**CSST# 02-3243**). Copies of valid state certificates are presented in Appendix C.

ASBESTOS CONTAINING MATERIALS

The following asbestos containing materials were identified:

District Site

Building #A - Administration

Material Description	Material Location
12"x12" Floor tile (brown)	**Staff Lounge Area (top layer)**
12"x12" Floor tile (yellow)	**Staff Lounge Area (bottom layer)**
Floor tile mastic	**Staff Lounge Area**
12"x12" Floor tile (beige) and associated mastic	**Custodial Closet – Southwest**
12' x 12" Floor tile (tan) and associated mastic	**Telephone Room**
Wallboard (<1%)	**Throughout Bldg.**

Building #E – Transportation Offices

- No asbestos was identified in the samples collected for this building.

Building #F – Transportation Garage

Material Description	Material Location

T.S.I. pipe covering – (P/C) multiple sizes	Under Raised Flooring Area at West End of Garage
T.S.I. Pipe insulation elbows – (ELB) multiple sizes	Under Raised Flooring Area at West End of Garage
4" Cement pipe	Computer Storage Area at Sink - unattached
9" Floor tile (beige) and associated mastic	Computer Storage Area – Southwest Portion of Bldg.
Insulated doors "Ice-box"	Southwest Portion of Bldg. near Computer Storage Area – Refrigerator Doors (Qty. 4)
Plaster	Southwest Portion of Bldg. near Computer Storage Area – At Refrigerated Door Areas
Fume Hood Joint Gasket (WOV)	Raised Flooring Area at West End of Garage At Fume Hood

Orange Coast College

Field House

Material Description	Material Location
Transite Panels	Exterior at Doors and Windows
Transite Panels	Electrical Room at South Restrooms
TSI – pipe insulation (all sizes)	Exterior Boiler Room
TSI – pipe elbow insulation (all sizes)	Exterior Boiler Room
TSI – pipe insulation (4" diam.)	Exterior Boiler Room
HVAC duct seam tape	Exterior Boiler Room
TSI – Boiler Tank Insulation	Exterior Boiler Room
Woven material at Tank	Exterior Boiler Room
10" Transite Pipe	Exterior Boiler Room

Fine Arts – Building #5

Material Description	Material Location
Fireproofing	Structural Members Throughout
Fire Rated Doors	Room 116A at Double Doors
Acoustic Ceiling Material	Lecture Halls
Orange Vinyl Sheet Flooring	Room 121,201B, 203, 103 (under carpet)
Wallboard (<1%)	Throughout Bldg.

Administration – Building #7

Material Description	Material Location
Fireproofing	**Structural Members Throughout**
Transite Pipe	**Open Air Utility Area – East side**
Window Putty	**Exterior**
Leveling Compound	**Custodial Closet**
Brown Linoleum Flooring	**Exterior Utility/Telephone Room at Slider Door**

Counseling and Admissions – Building #8

Material Description	Material Location
Tan Vinyl Floor Tile and associated mastic	**Rooms 108 & 109 – Under Carpet**
Grey Vinyl Floor Tile and associated mastic	**Room 104**

Counseling and Admissions – Building #9

Material Description	Material Location
Tan Vinyl Floor Tile and associated mastic	**Throughout Bldg. - Under Carpet**
Transite Pipe	**Exterior Electrical Room**

Special Services – Building #10

Material Description	Material Location
12" Orange Vinyl Floor Tile	**Kitchen**

Business - Building #13

Material Description	Material Location
Window Putty	**Exterior**

Business - Building #14

Material Description	Material Location
Wallboard (<1%)	**Throughout Bldg.**
HVAC Duct Seam Tape	**Exterior Telephone Room/HVAC Room**
HVAC Duct Vibration Gasket (Qty. 4)	**Exterior Telephone Room/HVAC Room**

Science - Building #35

Material Description	Material Location
Vinyl Floor Tile and associated mastic	**Rooms 149 & 150 – Under Carpet**
9" Vinyl Floor Tile and associated mastic	**Rooms 151 & 155**
Flooring Mastic	**Room 154 – Under Carpet**

Science - Building #36

Material Description	Material Location
Window Putty	**Exterior**
Beige Vinyl Floor Tile and associated mastic	**Room 144 – Under Carpet**
Plaster	**Throughout Bldg.**
12" White w/brown Vinyl Floor Tile and associated mastic	**Room 148 & Lab Prep Area**

Reprographics - Building #37

Material Description	Material Location
TSI Pipe Insulation & Pipe Elbows	**Attic**
Tan Floor Tile Debris	**Crawlspace at Room 168**
TSI Pipe Insulation & Pipe Elbows (multiple sizes)	**Utility Room at Men's Restroom**
HVAC Duct Vibration Gasket	**Utility Room at Men's Restroom**
Ceiling Tile Debris	**Crawlspace at Room 168**
Vinyl Floor Tile and associated mastic	**Rooms 168 & 169 – Under Carpet**
Vinyl Floor Tile and associated mastic	**Rooms 162, 163 & 164 – Under Carpet**

Planetarium - Building #39

Material Description	Material Location
Tan Vinyl Floor Tile	**Throughout Bldg. – Under Carpet**
Wallboard (<1%)	**Throughout Bldg.**

Science Hall - Building #40

Material Description	Material Location
Acoustic Ceiling	**Lecture Seating Area**
Wallboard	**Throughout Bldg.**
Fire Rated Door	**Room 110A**

Transite Panels	Below windows at offices

Science Lecture - Building #41

Material Description	Material Location
Spray Applied Cementous Ceiling Material	**Foyer Ceiling**
12" Beige Vinyl Floor Tile and associated mastic	**Rear Prep & Storage Area at Stage**
Brown Base Cove Mastic	**Rear Prep & Storage Area at Stage**
Spray Applied Acoustic Ceiling Material	**Room 101 & 102**
12" Brown Vinyl Floor Tile and associated mastic	**Projection Rooms 5 & 6**
Fireproofing	**Structural Members Throughout**

Allied Health - Building #50

Material Description	Material Location
Plaster (<1%)	**Rooms 110 & 112**

Home Economics - Building #71

Material Description	Material Location
Fire rated door	**Room 114 Rear Utility Closet (Qty. 1)**
HVAC Duct Seam tape	**Room 114 Rear Utility Closet**
Transite Panels	**Panels Below Windows – Entire Bldg.**
Vinyl floor tile (green) and associated mastic	**Throughout Bldg. – Under Carpet**

Home Economics - Building #72

Material Description	Material Location
Metal Fire doors (Qty. 2)	**Room 102 Offices at HVAC Closet**
TSI – pipe insulation (all sizes)	**Throughout Attic**
TSI – pipe elbow	**Throughout Attic**
Metal Fire doors (Qty. 2)	**Room 108 Exterior HVAC Closet**
Metal Fire doors (Qty. 3)	**Exterior Utility Closet at Room 107 (Playground Area)**
Transite Panels	**Entire Bldg. Exterior below windows**
12" Peach Vinyl Floor tile and associated mastic	**Room 107**
Wallboard (< 1%)	**Throughout Bldg.**

Forum - Building #81

Material Description	Material Location
Transite Panels	**Exterior; At Office Area Windows**
Acoustic Ceiling Material	**Throughout Bldg.**
Fire Rated Door	**Office Area Hallway at Sink Room**
Fire Rated Doors (Qty. 2)	**Office Area Hallway at HVAC Closet**
Fire Rated Door	**Forum Seating Area at North entry; Attic Access Door**
HVAC Duct Seam Tape	**Throughout Attic**
Window Putty	**Faculty Office Area**
Wallboard with associated joint compound	**Throughout Bldg.**
9" Brown Vinyl Floor Tile and associated mastic	**Forum Seating Area Entry and Exits**
9" Grey Vinyl Floor Tile and associated mastic	**Division Office; Film Room**
9" Beige Vinyl Floor Tile and associated mastic	**Division Office; Film Room & Faculty Office**

Portside Café - Building #85

Material Description	Material Location
TSI Pipe Elbow	**Attic above Café Storage Room**
Transite Panels	**Café Service/Side Entrance – South Side**

Student Center - Building #86

Material Description	Material Location
Wallboard (<1%)	**Throughout Bldg.**

Administration - Building #1

Material Description	Material Location
Wallboard (< 1%)	**Throughout Bldg.**

Student Health Center - Building #89

Material Description	Material Location
TSI – pipe insulation (multiple sizes)	**Throughout Bldg. - Attic**
TSI – pipe elbow insulation (multiple sizes)	**Throughout Bldg. - Attic**
12" White w/blue Vinyl Floor Tile	**Throughout Bldg.**

White Cobble pattern Vinyl Sheet Flooring	West Custodial Closet

Gymnasium - Building #91

Material Description	Material Location
HVAC duct expansion joint gasket	Copy Room Attic at Dance Room B
HVAC duct seam tape	Copy Room Attic at Dance Room B
Fire Rated Door (Qty. 1)	Copy Room Attic at Dance Room B
HVAC duct expansion joint gasket	Dance Room B Storage - Attic
HVAC duct seam tape	Dance Room B Storage – Attic
Fire Rated Door (Qty. 1)	Dance Room B Storage - Attic
12" White/Blue Vinyl Floor Tile	Gymnasium Foyer & Restrooms
Wallboard (<1%)	Gymnasium Foyer (ceiling above existing acoustic ceiling tiles)

Women's Locker Room - Building #92

Material Description	Material Location
TSI Pipe Elbow (4" diameter)	Coed Team Room
HVAC duct seam tape	Throughout Bldg.
TSI Pipe elbow (4" diameter)	Equipment Room at Laundry
Wallboard (<1%)	Throughout Bldg.

Bookstore Warehouse– Building #144

- No asbestos was identified in the samples collected for this building.

Bookstore – Building # 83

Material Description	Material Location
HVAC Duct Seam Tape (TAP)	Backroom near "Roll-up Door"
Acoustic ceiling material (sprayed on) (<1%)	Throughout Bldg.
Wallboard (<1%)	Throughout Bldg.
Floor tile (beige) and associated mastic	Men's Restroom Entry

Men's Locker Room – Building # 96

Material Description	Material Location
T.S.I. Pipe insulation (P/C)	Men's Locker Room at HVAC Loft Above Equipment Room

T.S.I. Pipe elbow (ELB)	Men's Locker Room at HVAC Loft Above Equipment Room
T.S.I. Pipe elbow (ELB)	Men's Locker Room at HVAC Loft Above Equipment Room – Floor Cavity

Pool Equipment Room at Breezeway

Material Description	Material Location
T.S.I. Pipe insulation (P/C)	**Pool Equipment Room at Bleachers**
T.S.I. Pipe elbow (ELB)	**Pool Equipment Room at Bleachers**

Bursars Office – Building # 149

Material Description	Material Location
HVAC duct seam tape (TAP)	**Attic above drop ceiling**

Handball – Building # 97

- No asbestos was identified in the samples collected for this building.

Student Center – Building # 86

Material Description	Material Location
Wallboard (<1%)	**Throughout Bldg.**

Skill Center - Building # 47

Material Description	Material Location
Transite Panels	**Room 101, Welding Booths (Qty. 20)**
HVAC Duct Seam Tape	**Room 101**
HVAC Duct Vibration Gasket	**Room 101**
12" Beige Multi-Colored Vinyl Floor Tile & Associated Mastic	**Office 101B, Office 102A and Classroom 103**
Wallboard and associated joint compound (< 1%)	**Throughout Bldg.**
White Welding Curtains	**Room 101 at north rear of room**

Skill Center - Buildings # 47 Middle Classrooms & # 48

Material Description	Material Location
Wallboard (< 1%)	**Room 104**
Transite Panels	**Skill Center #47 Middle Classrooms below windows**
Woven Fume Ventilation System Gaskets	**Skill Center #47; Welding 101**
Transite Panels	**Skill Center # 48; Airframe Room 110**
12" Beige Multi-Colored Vinyl Floor Tile & Associated Mastic	**Skill Center # 48; Airframe Room 110B Office and 110A Office**
Wallboard and associated joint compound	**Throughout Airframe 110**

Allied Health- Building #49

Material Description	Material Location
Beige Vinyl floor Tile & Associated Mastic	**Room 105; Under Carpet**
Flooring Mastic (black)	**Room 103; Under Carpet**
Carpet Glue	**Room 101**
Window Putty (< 1%)	**Exterior**

Horticulture - Building #64

Material Description	Material Location
Wallboard (< 1%)	**Throughout Bldg.**
Window Putty	**Chemical Room (Northeast Unattached Bldg.)**
Brown Base Cove & Associated Mastic	**Room 101**
12" Tan With Pattern Vinyl Floor Tile	**Room 102 at Entry**

Horticulture Storage – Building #51

- No Access – Steel sided building with no visible suspect materials.

Lewis Applied Science- Building #42

Material Description	Material Location
Black Base Cove and associated mastic	**Throughout Bldg.**
12" Beige Vinyl Floor Tile & Mastic	**Rooms 101, 104, 119, 209, 210, and 211**
TSI Pipe Elbows	**Attic (above Room 104)**
12" Beige Multi-Colored Vinyl Floor Tile &	**Room 103 and 103A**

Mastic	
Stucco	2nd Floor External Soffit near Café
TSI Pipe Insulation & TSI Elbows (multiple sizes)	2nd Floor External HVAC Room
Woven HVAC Expansion Gasket	2nd Floor External HVAC Room
TSI Pipe Insulation & TSI Elbows (multiple sizes)	1st Floor Exterior Compressor Room
Elbow - 10" Diameter	Southwest Utility Room at Boiler
Stucco	2nd Floor External Soffit at South End of Bldg.
TSI Pipe Insulation	Southwest Utility Room at Boiler
TSI Pipe Elbow	Southwest Utility Room at Boiler

Chemistry– Building #69

Material Description	Material Location
HVAC Duct Expansion Joint	2nd Floor Utility Room 2 (Qty. 6)
HVAC Joint Seam Tape	2nd Floor Utility Room 2
Transite Table Tops	Laboratory Room 115 - Throughout
Fire Rated Door	½ & ½ Doors Throughout Middle Office Area (Qty. 4)
Yellow/Brown Sheet Flooring	Room 121
Brown Multi Sheet Flooring	1st Floor Middle Office Area and All Interior Areas of same
Orange Multi Sheet Flooring	Throughout Rooms 124 & 126 & 129
Green/Yellow Sheet Flooring	Rooms 115 & 118 Throughout
Yellow/Brown Sheet Flooring	Room 124 Middle and Middle Lab Area

Exercise Science– Building #83

Material Description	Material Location
TSI Elbows-3"	Exercise Lab Attic at Access Panel (Qty. 3)
TSI Pipe Insulation-3"	Exercise Lab Attic at Access Panel
TSI Elbows-3"	Exercise Science Classroom; above T-bar ceiling
9" Beige Vinyl Floor Tile and associated mastic	Faculty Office Stairwell and Offices Under Carpet
TSI Elbows-3"	2nd Floor Faculty Offices South Utility Closet at Roof Access
TSI Pipe Insulation-3"	2nd Floor Faculty Offices South Utility Closet at Roof Access
HVAC Duct Seam Tape	2nd Floor Faculty Offices South Utility Closet at Roof Access
Carpet Glue	1st Floor Exercise Room

Tan Vinyl Floor Tile and associated mastic	1st Floor Exercise Science Rooms – Under Carpet
12" Blue Vinyl Floor Tile with associated mastic	2nd Floor Faculty Office – Men's & Women's Restrooms
Wallboard (< 1%)	Throughout Bldg.

Social Science– Building #80

Material Description	Material Location
Fire Rated Door	Utility Room near Classroom 112
Wallboard (< 1%)	Throughout Bldg.
Vinyl Floor Tile & Mastic	Throughout Bldg. Under Carpet

Computing Center– Building #73

Material Description	Material Location
Fireproofing	Exterior Utility Closet near Social Science Bldg.
TSI Pipe Insulation	2nd Floor - Interior Loft Equipment Room near Elevator
TSI Pipe Elbows	2nd Floor - Interior Loft Equipment Room near Elevator
Fire Door	2nd Floor - Interior Loft Room D-12 Equipment
Fire Door	Classroom 105 at Storage Room
9" Beige Vinyl floor Tile	Classroom 105 at Storage Room
Fireproofing	Classroom 6; Above T-Bar Ceiling System
Vinyl Floor Tile and associated mastic	At Classroom 105 & Elevator – Under Carpet
Wallboard-Joint Compound	Throughout Bldg.

Business Education– Building #12

Material Description	Material Location
Transite Pipe	Room 104 Utility Closet
9" Grey Vinyl Floor Tile & Mastic	Exterior Custodial Closet at Room 104
Flooring Bullnose	Exterior Custodial Closet at Room 104
Flooring Mastic	Room 103 – Under Carpet
Tan Vinyl Floor Tile & Mastic	Rooms 101A & 101B
Window Putty	Exterior

Faculty House– Building #11

Material Description	Material Location
12" Pink Vinyl Floor Tile & Mastic	**Main Entry Area**
9" Orange Vinyl Floor Tile & Mastic	**Kitchen, Custodial Closet and HVAC Closet**
Vent Pipe Gasket	**HVAC Closet at vent pipe**
White Cobble Linoleum (Sub Floor)	**Bathroom**
Wallboard (< 1%)	**Throughout Bldg.**

Consumer Health Sciences – Building #43

- No asbestos was identified in the samples collected for this building.

Literature & Languages– Building #70

Material Description	Material Location
HVAC Expansion Gasket-Woven	**1st and 2nd Floor Utility/Equipment Rooms (Qty. 2 Each Room)**
HVAC Duct Joint Tape	**1st and 2nd Floor Utility/Equipment Rooms (Qty. 2 Each Room)**
Fire Rated Doors	**All Doors On First Floor**
Fire Rated Doors	**All Doors On Second Floor**
Wallboard (<1%)	**Throughout Bldg.**

Strength Lab – Building #139

- No asbestos was identified in the samples collected for this building.

Analysis of the bulk samples was performed under microscopic examination to identify the composition of the suspect asbestos material. More specifically, the bulk samples were analyzed to determine if they consisted of the five asbestos types: chrysotile, amosite, crocidolite, anthophyllite, and actinolite/tremolite; and/ or fibrous non-asbestos constituents: mineral wool, cellulose, etc.; and/ or various non-fibrous constituents. Then, using the stereomicroscope, the microscopist visually estimated relative amounts of each constituent by determining the volume of each constituent in proportion to the total volume of the sample.

PLM samples were analyzed utilizing the Environmental Protection Agency's Test Methods: Methods for the determination of Asbestos in Bulk Building Materials (EPA 600/R-93/116, July 1993) and the McCrone Research Institute's The Asbestos Particle Atlas as method references. Additional treatment and tests may be required to accurately define composition (i.e. ashing, extraction, acetone treatment, and TEM).

FINDINGS

Asbestos was identified in various building materials located throughout all three (3) facilities (see page 4).

Interpretation of Asbestos Results

A material is considered by the Environmental Protection Agency (EPA) to be asbestos-containing if at least one sample collected from the homogenous material contains asbestos in a concentration greater than one percent (>1 %). For worker protection, CAL-OSHA defines materials with a concentration of one-tenth of one percent of asbestos or greater (>.1%) as asbestos containing.

CONCLUSIONS AND RECOMMENDATIONS

Results of the bulk sample analysis show that **asbestos was identified in the representative samples collected as part of this survey**. Therefore Patriot recommends the following:

Any materials identified as asbestos containing materials (in this report or any previous survey reports), which have the potential to be disturbed during construction, renovation, and/or demolition activities; should be removed prior to the commencement of such activities. In addition, if any new materials (not included in this survey report) are discovered, which have the potential to be affected during any construction, renovation, and/or demolition activities; these materials should be either tested and/ or removed prior to the commencement of such activities. All such removal work should be performed by appropriately qualified and licensed asbestos abatement personnel under proper abatement conditions, as dictated by EPA and Cal-OSHA regulations.

The U.S. Environmental Protection Agency (EPA) regulations do not require removal of asbestos-containing materials that are in good condition and/ or do not have the potential to be disturbed. However, personnel who may be involved with building renovations will need to be advised of the presence of the specific asbestos containing materials and appropriate measures may be warranted in order to assure the identified asbestos-containing materials are not disturbed during such renovation activities. If the asbestos-containing materials left in place are disturbed during any future activities, the materials must be handled and disposed of in accordance with applicable State and Federal regulations.

TABLE I

SUMMARY OF PLM ANALYTICAL DATA

District Site

Summary of Findings

The following building materials were sampled for asbestos content:

Bolded items indicate asbestos containing materials
ND indicates no asbestos detected in samples

Building #A - Administration

Material Description	Sample Number	Material Location	Material Cond.
12"x12" Floor tile (brown)	**1-3 / 10-20% CH**	**Staff Lounge Area (top layer)**	**Good**
12"x12" Floor tile (yellow)	**1-3 / 10-20% CH**	**Staff Lounge Area (bottom layer)**	**Good**
Floor tile mastic	**1-3 / 10-20% CH**	**Staff Lounge**	**Good**
12"x12" Floor tile (beige) and associated mastic	**4-6 / 6 - 20% CH**	**Custodial Closet – Southwest**	**Good**
12' x 12" Floor tile (tan) and associated mastic	**7-9/ 5 - 10% CH**	**Telephone Room**	**Good**
Plaster	10/ ND	**Custodial Closet – Southwest**	Good
Cement	11/ ND	Exterior	Good
12" Acoustic Wall Tile	12/ ND	Copy Room	
Linoleum flooring (white with sand)	13-14/ ND	Men's Restroom – Southwest	Good
Linoleum flooring (grey)	15/ ND	Men's Restroom – Southwest	Good
12" Acoustic Ceiling Tile	16-18/ ND	Men's Restroom – Southwest	Good
Wallboard (<1%)	**19-22 / <1% CH**	**Throughout Bldg.**	**Good**
Linoleum flooring (white cobblestone)	23-25/ ND	Men's Restroom 2 – Northeast	Good
Wall tile mastic dots	26-27/ ND	Copy Room	Good
2' x 4' Acoustic Ceiling Tile	28-29/ ND	Above Men's Restroom 2 Ceiling – Northeast	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Building #E – Transportation Offices

Material Description	Sample Number	Material Location	Material Cond.
Linoleum flooring (black/white)	1-3/ ND	Office Areas	Good
Wallboard	4-9/ ND	Throughout Bldg.	Good
2' x 3' Acoustic ceiling tile	10-12/ ND	Throughout Bldg.	Good
Window putty	13-14/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Building #F – Transportation Garage

Material Description	Sample Number	Material Location	Material Cond.
T.S.I. pipe covering – (P/C) multiple sizes	**1 (assumed)**	**Under Raised Flooring Area at West End of Garage**	**Good**
T.S.I. Pipe insulation elbows – (ELB) multiple sizes	**2 (assumed)**	**Under Raised Flooring Area at West End of Garage**	**Good**
4" Cement pipe	**3 (assumed)**	**Computer Storage Area at Sink - unattached**	**Damaged**
9" Floor tile (beige) and associated mastic	**4-6/ 6 - 10% CH**	**Computer Storage Area – Southwest Portion of Bldg.**	**Good**
Wallboard	7, 12-15/ ND	Throughout Bldg.	Good
Insulated doors "Ice-box"	**8 (assumed)**	**Southwest Portion of Bldg. near Computer Storage Area – Refrigerator Doors (Qty. 4)**	**Good**
Wall insulation	9-11/ ND	Southwest Portion of Bldg. near Computer Storage Area – At Refrigerated Door Areas	Good
Plaster	**16-18 / 5 - 10% CH**	**Southwest Portion of Bldg. near Computer Storage Area – At Refrigerated Door Areas**	**Good**
Window putty	19-21/ ND	Computer Storage Area – Southwest Portion of Bldg. – Interior	Good
Cement	22/ ND	Exterior – Foundation	Good
Fume Hood Joint Gasket	**23**	**Raised Flooring Area at West End of Garage**	**Good**

(WOV)	(assumed)	At Fume Hood	
Moisture barrier paper	24/ ND	Garage at Bay Doors	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Orange Coast College

Summary of Findings

The following building materials were sampled for asbestos content:

Bolded items indicate asbestos containing materials
ND indicates no asbestos detected in samples

Field House – Stadium Locker Room

Material Description	Sample Number	Material Location	Material Cond.
Transite panels	**1-3 / 18% CH**	**Exterior at Doors and Windows**	**Good**
Transite panels	**4 (assumed)**	**Electrical Room at South Rest Rooms**	**Good**
TSI – pipe insulation (all sizes)(P/C)	**5 / 10% AM**	**Exterior Boiler Room**	**Good**
TSI – pipe elbow 8" (ELB)	**6 / 10% AM**	**Exterior Boiler Room**	**Good**
TSI – pipe insulation 4"(P/C)	**7 / 10% CH**	**Exterior Boiler Room**	
HVAC Duct Seam Tape (TAP)	**8-10 / 30-60% CH**	**Exterior Boiler Room**	**Good**
T.S.I - Boiler Tank Insulation	**11 (assumed)**	**Exterior Boiler Room**	**Good**
Woven material at Tank	**12 (assumed)**	**Exterior Boiler Room**	**Good**
10" Transite Pipe	**13 (assumed)**	**Exterior Boiler Room**	**Good**
Plaster	14-18/ ND	Throughout Bldg.	Good
Stucco	19-24/ ND	Exterior	Good
Window putty	25/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access to Home Team Office of "Ernie Weiss"
- No Access to Concession Stand Area

Fine Arts – Building # 5

Material Description	Sample Number	Material Location	Material Cond.
Leveling compound	1/ ND	Lecture 119 at entry	Good
Fireproofing	**2, 7 (assumed)**	**Structural Members Throughout**	**Good**
Fire doors (Qty. 2)	**3 (assumed)**	**Room 116A (double-doors)**	**Good**
Acoustic ceiling material	**4 (assumed)**	**Lecture 116**	**Good**
Acoustic ceiling material	**5-6, 10-11 / 5 - 7% CH**	**Lecture Halls**	**Good**
Fireproofing	8-9/ ND	Structural Members Throughout	
Base cove (gray) and mastic	12-13/ ND	Room 102	Good
Base cove (brown) and mastic	14-16/ ND	Throughout Bldg.	Good
Carpet mastic	17-19/ ND	Throughout Bldg.	Good
12" Acoustic ceiling tile (rough)	20-23/ ND	Control Room at 201, Room 102, Men's Restroom, Room 101A	Good
Vinyl sheet flooring (orange cobble pattern)	**24-27 / 15 - 20% CH**	**Custodial Room 121 & 203, Room 201B, Room 103 (under carpeting)**	**Good**
12" Acoustic ceiling tile (random pinhole)	28-30/ ND	Room 118 - Offices	Good
Formed Cement	31-34/ ND	Interior & Exterior	Good
Wallboard and associated joint compound (<1%)	**35-44 / <1% CH**	**Throughout Bldg.**	**Good**
2' x 3' Acoustic ceiling tile	45-47/ ND	Room 118 Offices	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Room 118A Storage
- No Access – Room 103A
- No Access – Room 105 Photo Issue Room
- No Access – Attic Area of Lecture Halls Have Visible Fireproofing Not Accessible

Administration – Building # 7

Material Description	Sample Number	Material Location	Material Cond.
Fireproofing material	**assumed**	**Structural Members Throughout**	**Good**
Cement pipe - transite	**2 (assumed)**	**Open Air Utility Area at East side of Bldg.**	**Damaged**
Stucco	22-27/ ND	Exterior	Good
Wallboard	4-7/ ND	Throughout Bldg.	Good
Window putty	**8-10 / 3 - 5% CH**	**Exterior**	**Good**
2' x 3' Acoustic ceiling tile	11/ ND	Throughout	Good
12" Acoustic ceiling tile	12-16/ ND	Registration/Counseling/Dean's Office/Matriculation	Good
Leveling compound	**17 / 2% CH**	**Custodial Closet**	**Good**
Linoleum flooring (brown)	**18-20/ 10 - 20% CH**	**Exterior Telephone Room near Sliding Door**	**Good**
Smooth cement	21/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- Access to ceiling cavity throughout Bldg. # 7 is limited due to plywood sheeting above existing drop ceiling panels.

Counseling and Admissions – Building # 8

Material Description	Sample Number	Material Location	Material Cond.
Plaster	1, 7 & 12/ ND	Throughout Bldg. – Walls Dividing Classrooms	Good
Vinyl floor tile (tan)	**2, 8 / 7-8% CH**	**Rooms 108 & 109 – Under Carpet**	**Good**
Associated mastic	8/ ND	Room 108 – Under Carpet	
Base cove (black) and associated mastic	3,9 & 29/ ND	Rooms 108 & 109 and Breezeway at Faculty Offices	Good
2' x 4' Acoustic wall panel (fissured)	4, 16, 17/ ND	Rooms 105 & 109	Good
2' x 4' Acoustic ceiling tile (w/holes)	5, 10 & 4 19/ ND	Rooms 109, 108, 105	GoodGood

2' x 4' Acoustic ceiling tile (smooth)	6, 11, 18/ ND	Rooms 109, 108, 105	Good
Base cove (grey) and associated mastic	13-15/ ND	Room 105	Good
12" x 12" Acoustic ceiling tiles (smooth)	20-22/ ND	Room 101	
12" x 12" Acoustic ceiling tiles (large random holes)	23-28/ ND	Room 102, 104	Good
Vinyl floor tile (grey) and associated mastic	**30-32 / 4-5% CH**	**Room 104**	**Good**
Wallboard	33-35/ ND	Room 104 – Office Build Outs	Good
Window putty	36-38/ ND	Exterior	Good
Stucco	39 & 40/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Counseling and Admissions – Building # 9

Material Description	Sample Number	Material Location	Material Cond.
Plaster	1, 10 & 15/ ND	Throughout Bldg.	Good
Black Base Cove and associated mastic	2, 8 & 18/ ND	Throughout Bldg.	Good
Vinyl floor tile (tan)	**3, 6, 7 & 19 / 5 - 7% CH**	**Throughout Bldg. – Under Carpet**	**Good**
2' x 4' Acoustic ceiling tile (large hole)	4, 9 & 17/ ND	Throughout Bldg. – Walls & Ceilings	Good
2' x 4' Acoustic ceiling tile (smooth)	5 & 16/ ND	Throughout Bldg.	Good
Wallboard	12-14/ ND	Throughout Bldg.	Good
Cement foundation	20/ ND	Exterior	Good
Stucco	21/ ND	Exterior	Good
Transite Pipe	**22 (assumed)**	**Exterior Electrical Room**	**Good**
Smooth cement	23-24/ ND	Exterior	Good
Window putty	25-26/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Special Services – Building #10

Material Description	Sample Number	Material Location	Material Cond.
Stucco	1-3/ ND	Exterior	Good
Plaster	4/ ND	Kitchen	Good
Wallboard	5 & 6/ ND	Throughout Bldg.	Good
12" Acoustic ceiling tile (rough)	7-10/ ND	Disabled Student Area, Learning Center, Reception & Kitchen	Good
12" Acoustic ceiling tile (pin hole)	11/ ND	Room 105	Good
12" Vinyl floor tile (orange)	**12-14 / 2 - 3% CH**	**Kitchen**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Business – Building #13

Material Description	Sample Number	Material Location	Material Cond.
Wallboard	1,6-7,12 & 16/ ND	Throughout Bldg.	Good
Plaster (smooth)	2,8/ ND	Men's & Women's Restroom	Good
Black Base cove and associated mastic	3,13/ ND	Throughout Bldg.	Good
2' x 4' Acoustic ceiling tile	4,9-11, 15/ ND	Throughout Bldg.	Good
2' x 4' Acoustic wall tile	14/ ND	Throughout Bldg.	
12" Acoustic ceiling tile (random hole)	5/ ND	Room 105, Storage Room	Good
Window putty	**17-18 / 3% CH**	**Exterior**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Business – Building #14

Material Description	Sample Number	Material Location	Material Cond.
Fireproofing material	1 & 6/ ND	Throughout Bldg. Attic on Structural Members	Good
Wallboard (<1%)	**2,7,10,17, 18,23-25,29, 102-105 / <1% CH**	**Throughout Bldg.**	Good
Stucco	3/ ND	Exterior	Good
HVAC Duct Seam Tape	101 / ND	Exterior Telephone Room/HVAC Room	Good
HVAC Duct Seam Tape	**4 (assumed)**	**Exterior Telephone Room/HVAC Room**	**Good**
HVAC Duct Vibration Gasket	**5 (assumed)**	**Exterior Telephone Room/HVAC Room - (Qty. 4)**	**Good**
Black Base Cove	22 / ND	Room 110	**Good**
Brown Base Cove	8, 9/ ND	Room 108	Good
Grey Base Cove	30/ ND	Room 111	
12" Vinyl floor tile (white)	11-13/ ND	Room 108	Good
12" Acoustic ceiling tile	14-16/ ND	Room 108 Rear Classroom	Good
x 3' Acoustic ceiling tile	19-21 & 31/ ND	Throughout Bldg.	Good
Linoleum flooring (white)	26-28/ ND	Room 111 – Kitchen	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Science– Building #35

Material Description	Sample Number	Material Location	Material Cond.
Window Putty	1-2/ ND	Exterior	Good
12" White Vinyl Floor Tile	3-5/ ND	Room 149 Under Carpet at Crawlspace Hatch	Good
Stucco (< 0.1% pt. count)	6-9 / <0.1%	Exterior	Good
Vinyl Floor Tile & Mastic	**10-11 / 10 - 15% CH**	**Room 149 & 150 Under Carpet**	**Good**
9" Vinyl Floor Tile & Mastic	**12-16 / 5 - 10% CH**	**Room 151 & 155**	**Good**
x 2' Acoustic Ceiling Tile	17-18/ ND	Room 154	Good

(random pinhole)			
2' x 3' Acoustic Wall Tile-Random Hole	19-20/ ND	Room 154 & 150	Good
Flooring Mastic	**21 / 3% CH**	**Room 154 – Under Carpet**	**Good**
2' x 3' Acoustic Ceiling Tile	22-23/ ND	Room 152 & 153	Good
Brown Base Cove & Mastic	24-28/ ND	Throughout Bldg.	Good
2' x 3' Acoustic Ceiling Tile (random hole)	29-31/ ND	Room 151	Good
Wall Plaster	32-36/ ND	Throughout Bldg.	Good
2' x 3' Acoustic Ceiling Tile-Smooth	37-39/ ND	Room 151	Good
Wallboard-Joint Compound	40-41/ ND	Room 150 – Built Out Area	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Room 151; Room 5A & Non-labeled Door

Science – Building #36

Material Description	Sample Number	Material Location	Material Cond.
Base cove (large brown)	1/ ND	Room 148	Good
Base cove (small brown)	2-4/ ND	Throughout Bldg.	Good
Stucco (<0.1%) pt. count	5-7 / <0.1% CH	Exterior	Good
2' x 3' Acoustic wall tile (random holes)	8-9/ ND	Throughout Bldg.	Good
Base cove (black)	10-12/ ND	Throughout Bldg.	Good
2' x 3' Acoustic ceiling tile (random holes)	13-15/ ND	Throughout Bldg.	Good
12" Vinyl floor tile (white with gray) with associated mastic	**16-18 / 6% CH**	**Rooms 141/142**	**Good**
12" Vinyl floor tile (tan)	19-20/ ND	Rooms 141/142 – Accent Stripe	Good
2' x 3' Acoustic ceiling tile (smooth)	21-23/ ND	Rooms 145/146	Good
Vinyl Sheet flooring (brown cobble)	**24-26 / 15% CH**	**Rooms 143/145**	**Good**
Window putty	**27-29 / 3% CH**	**Exterior**	**Good**
Vinyl Floor Tile (beige) and associated mastic	**30-31 / 8 – 10% CH**	**Room 144 – Under Carpet**	**Good**

Plaster	**32-39 / <1 - 4% CH**	**Throughout Bldg.**	**Good**
Wallboard	40-41/ ND	Room 141 (Rear), Room 142 (Front)	Good
2' x 2' Acoustic ceiling tile (straight hole)	42-44/ ND	Room 141/142	Good
12" Vinyl floor tile (white with brown) with associated mastic	**45-47 / 3 - 8% CH**	**Room 148 and Lab Prep Area**	**Good**
12" Acoustic ceiling tile (pin hole)	48-50/ ND	Room 144 Office and Computer Lab Area	Good
Base cove (gray)	51-52/ ND	Room 146	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Reprographics – Building #37

Material Description	Sample Number	Material Location	Material Cond.
TSI – pipe insulation (all sizes)	**2, 8 (assumed)**	**Attic**	**Good**
TSI – pipe elbows (all sizes)	**1, 7 (assumed)**	**Attic**	**Good**
TSI Debris	3/ ND	Crawlspace Under Room 168	Sig. Damaged
Tan Floor Tile Debris and associated mastic	**4-6 / 5 - 10% CH**	**Crawlspace Under Room 168**	**Sig. Damaged**
TSI – pipe elbows (all sizes)	**9 (assumed)**	**Utility Room near Men's Restroom**	**Good**
TSI – pipe insulation (all sizes)	**10 (assumed)**	**Utility Room near Men's Restroom**	**Good**
HVAC Duct Vibration Gasket	**11 (assumed)**	**Utility Room near Men's Restroom**	**Good**
Ceiling Tile Debris	12 / ND	Crawlspace Under Room 168	Sig. Damaged
Wall Plaster - Rough	13-14/ ND	Exterior Utility Room near Men's Restroom & Interior Utility Room	Good
Wall Plaster - Smooth	15-20/ ND	Throughout Bldg.	Good
2' x 3' Acoustic Ceiling Tile	21-25/ ND	Throughout Bldg.	Good
Vinyl Floor Tile and associated mastic	**26-31 / 1 - 7% CH**	**Rooms 168/169 – Under Carpet**	**Good**
Orange Base Cove and associated mastic	32-34/ ND	Print Room	Good

Black Base Cove and associated mastic	35-37/ ND	Garage/Store Room	Good
Brown Base Cove and associated mastic	38-40/ ND	Rooms 163 and 169	Good
Stucco	41/ ND	Exterior	Good
12" x 12" Acoustic Ceiling Tile	44/ ND	Rooms 162 - 164	Good
Vinyl Floor Tile and associated mastic	**47-49 / 5 - 10% CH**	**Rooms 162 – 164; Under Carpet**	**Good**
12" x 12" Acoustic Ceiling Tile (random hole)	50-52/ ND	Garage/Store Room	Good .
2' x 4' Acoustic Ceiling Tile	53-54/ ND	Room 168 – Above existing ceiling	Good
Wallboard with associated joint compound	55-58/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Telephone Equipment Room 1; Door Jammed

Planetarium – Building #39

Material Description	Sample Number	Material Location	Material Cond.
Vinyl Sheet flooring (tan)	**1-3 / 7% CH**	**Throughout Bldg. – Under Carpeting**	**Good**
Wallboard and associated joint compound (< 1%)	**4-8 / <1% CH**	**Throughout Bldg.**	**Good**
Base cove (brown) and associated mastic	9-10/ ND	Throughout Bldg.	Good
Plaster	11-12/ ND	Planetarium Hallway	Good
Exterior covering (rough coat)	13-14/ ND	Planetarium Exterior; at round portion	Good
Stucco	15-16/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access   Small closet at South entry to Planetarium

Science Hall – Building #40

Material Description	Sample Number	Material Location	Material Cond.
Acoustic ceiling	**1-3,8, 10 / 6% CH**	**Lecture Seating Area**	**Good**
Wallboard with joint compound	**4-6,28-30 / <1-3% CH**	**Throughout Bldg.**	**Good**
Base cove (black) with associated mastic	7,14,19/ ND	Throughout Bldg.	Good
Wall plaster	9,23,24/ ND	Throughout Bldg.	Good
Stucco (< 0.1%) pt. count	35-37/ (< 0.1%)	Exterior	Good
Acoustic ceiling tile mastic (brown)	11-13/ ND	Room 110 and 110A	Good
Base cove mastic (white)	15/ ND	Room 131	Good
Fire rated door (FRD)	**16 (assumed)**	**Room 110A**	**Good**
Transite panels	**17 (assumed)**	**Below windows at offices**	**Good**
Acoustic ceiling tile mastic (brown)	18/ ND	Room 110	Good
HVAC Duct Seam tape	20-22/ ND	Attic at 134	Good
2' x 3' Acoustic ceiling tile	25/ ND	Throughout Office Area	Good
Grout	26/ ND	North Side of Bldg. At Small Tiled Area	Good
12" Acoustic ceiling tile (pinhole pattern)	27/ ND	Throughout Office Area	Good
Window putty	31-34/ ND	North Side of Bldg. at Offices	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Science Lecture – Building #41

Material Description	Sample Number	Material Location	Material Cond.
Spray Applied Cementous Ceiling Material (A/C) (<1%)	**1 – 3 / <1% CH**	**Foyer Ceiling**	**Good**
12" Beige Vinyl Floor Tile and associated mastic	**4, 5, 9 / 3-10% CH**	**Rear Prep/Storage Area at Stage**	**Good**
Brown Base Cove Mastic	**6 – 8 / 4%**	**Rear Prep/Storage Area at Stage**	**Good**

	AN		
Black Base Cove Mastic	10 - 12/ ND	Rear Prep/Storage Area at Stage	
Spray Applied Acoustic Ceiling Material	**13 – 16 / 3% CH**	**Room 101/102**	Good
12" Acoustic Ceiling Tile - Rough	17-19/ ND	Room 5 - Storage	**Good**
12" Brown Vinyl Floor Tile and associated mastic	**20, 23-24 / 3-10% CH**	**Projection Rooms 5 & 6**	**Good**
Fireproofing	**21, 22, 25 / 6% CH**	**Structural Members Throughout**	**Good**
Wall Plaster	26 – 28/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Allied Health – Building #50

Material Description	Sample Number	Material Location	Material Cond.
Yellow Carpet glue	1/ ND	Room 110	Good
2' x 3' Acoustic ceiling tile (random pinhole)	2-4/ ND	Room 110 and Middle Lab Prep Area	Good
Tan Base Cove with associated mastic	5-6/ ND	Room 110	Good
Wallboard with associated joint compound	7-9/ ND	Throughout Bldg.	Good
Plaster (<1%)	**10,11 / <1% CH**	**Room 110, Room 112 (Custodial)**	**Good**
Vapor barrier paper	12-14/ ND	Rear Exterior Closet at Room 110	**Good**
Stucco (< 0.1%) pt. count	15-19/ < 0.1% CH	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access - Rear utility area behind cove

Home Economics – Building #71

Material Description	Sample Number	Material Location	Material Cond.
Fire rated door	**assumed**	**Room 114 Rear Utility Closet (Qty. 1)**	**Good**
HVAC Duct Seam tape	**assumed**	**Room 114 Rear Utility Closet**	**Good**
Transite Panels	**3 / 12% CH**	**Panels Below Windows – Entire Bldg.**	**Good**
Plaster	4-9/ ND	Throughout Bldg.	Good
Vinyl floor tile (green) and associated mastic	**10-12 / 4-10% CH**	**Throughout Bldg. – Under Carpet**	**Good**
Base cove (brown, tan & grey) and associated mastic	13-17/ ND	Brown – Room 112, Tan – Room 113, Grey – Room 111/112/114	Good
2' x 2' Acoustic wall tile	18-20/ ND	Throughout Bldg.	Good
Window putty	21-22/ ND	Throughout Bldg.	Good
12" Acoustic ceiling tile (random pattern)	23-25/ ND	Throughout Bldg.	Good
Stucco	26-28/ ND	Entire Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- Bldg. 71, Room 110, Rear Utility Closet: Door was "rain swollen" and not accessible.

Home Economics – Building #72

Material Description	Sample Number	Material Location	Material Cond.
Metal Fire doors (Qty. 2)	**1 (assumed)**	**Room 102 Offices at HVAC Closet**	**Good**
TSI – pipe insulation (all sizes)	**2 (assumed)**	**Throughout Attic**	**Good**
TSI – pipe elbow	**3 (assumed)**	**Throughout Attic**	**Good**
Metal Fire doors (Qty. 2)	**4 (assumed)**	**Room 108 Exterior HVAC Closet**	**Good**
Metal Fire doors (Qty. 3)	**5 (assumed)**	**Exterior Utility Closet at Room 107 (Playground Area)**	**Good**
Transite Panels	**6 (assumed)**	**Entire Bldg. Exterior below windows**	**Good**
2' x 2' Acoustic Wall Tile (straight hole pattern)	7-10/ ND	Throughout Bldg. (Rooms 103 & 107)	Good
Spray Applied Acoustic Ceiling Material	11-14/ ND	Throughout Bldg.	Good
Vinyl floor tile (peach)	**15-17 /**	**Room 107**	**Good**

and associated mastic	**8% CH**		
Carpet mastic	18/ ND	Room 102 – Office Hallway	Good
Plaster	19-21/ ND	Throughout Bldg.	Good
2' x 3' Acoustic ceiling tile	22-24/ ND	Room 104	Good
12" Vinyl floor tile (white)	25-27/ ND	Rooms 105 & 106	Good
Wallboard with associated joint compound (< 1%)	**28-32 / <1% CH**	**Throughout Bldg.**	**Good**
Base cove (tan)	33-35/ ND	Throughout Bldg. (Rooms 104,106,108)	Good
12" Acoustic ceiling tile (random hole pattern)	36-40/ ND	Throughout Bldg.	Good
Base cove (black)	41-43/ ND	Throughout Bldg. (Rooms 101,102,103)	Good
Stucco	44-46/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Food Lab Closet in Faculty Area at Room 107

Forum – Building #81

Material Description	Sample Number	Material Location	Material Cond.
Stucco (<0.1% pt. count)	1-5 / <0.1% CH	Exterior	Good
Transite panels	**6-7 / 15-20% CH**	**Exterior; At Office Area Windows**	**Good**
Acoustic Ceiling Material	**8, 23-32 / <1-7% CH**	**Entire Bldg.**	**Good**
. Fire rated door	**09 (assumed)**	**Office Area Hallway at Sink Room; adjacent to Forum**	**Good**
Fire rated doors (Qty. 2)	**10 (assumed)**	**Office Area Hallway at HVAC Closet**	**Good**
Fire rated door	**11 (assumed)**	**Forum Seating Area at North Entry; Attic Access Door**	**Good**
HVAC Duct Seam Tape (TAP)	**12 (assumed)**	**Throughout Attic**	**Good**
Window putty	**15 & 16 / 2-3% CH**	**Faculty Office Area**	**Good**
Base cove (brown) and associated mastic	17-22/ ND	Throughout Bldg.	Good
2' x 2" Acoustic Wall Tile	33-34/ ND	Forum Seating Area; Rear	Good
Wallboard with associated joint compound (<1%)	**35-38 / <1% CH**	**Throughout Bldg.**	**Good**

12" Acoustic ceiling tile	39-41/ ND	Faculty Offices	Good
9" Vinyl floor tile (brown) and associated mastic	**42-44 / 4-6% CH**	**Forum Seating Area Entry and Exits**	**Good**
9" Vinyl floor tile (grey) and associated mastic	**45, 46 / 4-5% CH**	**Division Office; Film Room**	**Good**
Plaster	47-54/ ND	Throughout Bldg.	Good
9" Vinyl floor tile (beige) and associated mastic	**55-58 / 6-10% CH**	**Division Office at Film Room & Faculty Offices**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Portside Cafe – Building #85

Material Description	Sample Number	Material Location	Material Cond.
TSI Pipe elbow	**assumed**	**Attic above Café Storage Room**	**Good**
Transite panels	**assumed**	**Café Service/Side Entrance – South Side**	**Good**
Sheet flooring (grey)	3-5/ ND	Retail and Kitchen Area	Good
Plaster	6-9/ ND	Entire Bldg.	Good
x 3' Acoustic ceiling tile	10-11/ ND	Exterior Office	Good
Base cove and mastic (black)	12-14 & 23/ ND	Entire Bldg.	Good
12" Acoustic ceiling tile (rough)	15-17/ ND	Café Break Room	Good
Stucco	18-20/ ND	Exterior of Bldg.	Good
Wallboard	21-22/ ND	Exterior Office	Good
12" Acoustic ceiling tile (semi-rough)	24-26/ ND	Retail Area	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

Administration – Building # 1

Material Description	Sample Number	Material Location	Material Cond.
Wallboard (<1%)	**1-3 / <1% CH**	**Throughout Bldg.**	**Good**
Stucco	4-6/ ND	Exterior	Good
Fireproofing material	7-8/ ND	Attic - Throughout	Good

12" Acoustic ceiling tile	9-10/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Student Health Center – Building #89

Material Description	Sample Number	Material Location	Material Cond.
Fireproofing material (sprayed on)	1 (assumed)	Throughout Bldg. On Structural Members	Good
TSI – pipe insulation (multiple sizes)	**2 (assumed)**	**Throughout Bldg. – Attic**	**Good**
TSI Pipe elbows (multiple sizes)	**3 (assumed)**	**Throughout Bldg. – Attic**	**Good**
Fireproofing material (sprayed on)	4-7/ ND	Throughout Bldg. On Structural Members	Good
12" Vinyl floor tile (white with blue)	**8-10 / 15 –25% CH**	**Throughout Bldg.**	**Good**
Wallboard	11-13/ ND	Throughout Bldg.	Good
Vinyl sheet flooring (white cobble pattern)	**14-16 / 25-30% CH**	**West Custodial Closet**	**Good**
Exterior cement	17-19/ ND	Exterior	Good
12" Acoustic ceiling tile	20-21/ ND	Room 110	Good
Base cove (black) and associated mastic	22/ ND	Exterior Telephone Closet	Good
Base cove (gray) and associated mastic	23-25/ ND	Throughout Bldg.	Good
2' x 2' Acoustic ceiling tile (smooth pinhole pattern)	26-28/ ND	Throughout Bldg.	Good
Carpet mastic	29/ ND	Room 110	Good
2' x 2' Acoustic ceiling tile (rough)	30-32/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access - Exterior Bio-hazardous Waste Storage Room

Gymnasium – Building #91

Material Description	Sample Number	Material Location	Material Cond.
HVAC expansion joint gasket (WOV)	**1 (assumed)**	**Copy Room Attic; at Dance Room B**	**Damaged**
HVAC Duct seam tape (TAP)	**2 (assumed)**	**Copy Room Attic; at Dance Room B**	**Good**
Fire door (Qty. 1)	**3 (assumed)**	**Copy Room Attic; at Dance Room B**	**Good**
HVAC expansion joint gasket (WOV)	**4 (assumed)**	**Dance Room B; Storage Room - Attic**	**Damaged**
HVAC Duct seam tape (TAP)	**5 (assumed)**	**Dance Room B; Storage Room - Attic**	**Good**
Fire door (Qty. 1)	**6 (assumed)**	**Dance Room B; Storage Room - Attic**	**Good**
12" Acoustic ceiling tile (pin hole)	7 (assumed)	Fitness Studio/Aerobics Room	Good
Plaster	8/ ND	Dance Room B	Good
2' x 3' Acoustic ceiling tile	9-11/ ND	Gymnasium Entry Foyer	Good
12" Acoustic ceiling tile (pin hole)	12-13/ ND	Gymnasium Foyer & Restrooms	Good
12" Vinyl floor tile (white/blue)	**14-16 /6-10% CH**	**Gymnasium Foyer & Restrooms**	**Good**
Acoustic ceiling tile mastic	17-18,103, 104/ ND	Gymnasium Foyer & Restrooms	Good
Stucco	19,108-112/ ND	Division Offices	Good
Smooth Cement Exterior Wall Material (<0.1% pt. count)	20,105,106,107 / <0.1% CH	Dance Room C	Good
Wallboard (<1%)	**21 / <1% CH**	**Gymnasium Foyer (ceiling above existing acoustic ceiling tiles)**	**Good**
Wallboard and associated joint compound	22-25/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- Gymnasium Ceiling, suspect-ceiling tiles with associated mastic visible

Women's Locker Room – Building #92

Material Description	Sample Number	Material Location	Material Cond.
TSI Pipe elbow (4" diameter)	**1 (assumed)**	**Coed Team Room**	**Good**
HVAC Duct seam tape	**2 (assumed)**	**Throughout Bldg.**	**Good**
TSI Pipe elbow (4" diameter)	**3 (assumed)**	**Equipment Room at Laundry Area**	**Good**
TSI Pipe Cover Tape (on fiberglass insulated pipe)	4/ ND	Equipment Room at Laundry Area	Damaged
2' x 4' Acoustic ceiling tile	5-7/ ND	Faculty Offices	Good
12" Vinyl floor tile (white with blue)	8-9/ ND	Locker Room entry and Faculty Office Hallway	Good
Stucco (<0.1%) pt. count	10-11 / <0.1% CH	Exterior	Good
Vinyl sheet flooring (white)	12-14/ ND	Faculty Locker Room	Good
12" Acoustic ceiling tile (random hole) and mastic	15-18/ ND	Faculty Office 4	Good
Joint compound	19/ ND	Faculty Locker Room; above t-bar ceiling	Good
Base cove (black)	20-22/ ND	Throughout Bldg.	Good
Plaster	23-27/ ND	Throughout Bldg.	Good
Wallboard (< 1%)	**28-31 / <1% CH**	**Throughout Bldg.**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Bookstore Warehouse– Building #144

Material Description	Sample Number	Material Location	Material Cond.
Wallboard	1-3/ ND	Throughout Bldg.	Good
Base cove (brown) and associated mastic	4/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Bookstore -- Building # 83

Material Description	Sample Number	Material Location	Material Cond.
HVAC Duct Seam Tape (TAP)	**1 (assumed)**	**Backroom near "Roll-up Door"**	**Good**
Acoustic ceiling material (sprayed on) (<1%)	**2-4, 15-17 / <1% CH**	**Throughout Bldg.**	**Good**
Wallboard (<1%)	**5-7 / <1% CH**	**Throughout Bldg.**	**Good**
12"x12" Vinyl Floor Tile (off-white) and associated mastic	8-10/ ND	Backroom	Good
2' x 3' Acoustic ceiling tile	11/ ND	Backroom	Good
White Linoleum flooring	12-13/ ND	Men's and Women's Restroom	Good
Floor tile (beige) and associated mastic	**14 / 4-7% CH**	**Men's Restroom Entry**	**Good**
Stucco (<0.1%) pt. count	**18-20 / <0.1% CH**	**Exterior**	
Cement	21/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Men's Locker Room – Building # 96

Material Description	Sample Number	Material Location	Material Cond.
T.S.I. Pipe insulation (P/C)	**1 (assumed)**	**Men's Locker Room at HVAC Loft Above Equipment Room**	**Good**
T.S.I. Pipe elbow (ELB)	**2 (assumed)**	**Men's Locker Room at HVAC Loft Above Equipment Room**	**Good**
T.S.I. Pipe elbow (ELB)	**3 / 3% CH**	**Men's Locker Room at HVAC Loft Above Equipment Room – Floor Cavity**	**Sig. Damaged**
Woven duct insulation paper	4 / ND	**Men's Locker Room at HVAC Loft Above Equipment Room**	Good
12" x 12" Floor tile (white with blue)	5-7/ ND	**Men's Locker Room at Entry and Office Hallway**	Good
Wallboard	8-9,101-104/ ND	Throughout Bldg.	**Good**
Stucco	10-15/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Pool Equipment Room Breezeway

Stucco	101-104/ ND	Pool Equipment Room at Bleachers	Good
T.S.I. Pipe insulation (P/C)	**(assumed)**	**Pool Equipment Room at Bleachers**	**Good**
T.S.I. Pipe elbow (ELB)	**(assumed)**	**Pool Equipment Room at Bleachers**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Bursars Office – Building # 149

Material Description	Sample Number	Material Location	Material Cond.
HVAC duct seam tape (TAP)	**1 (assumed)**	**Attic above drop ceiling**	**Good**
HVAC duct seam tape (TAP)	2 / ND	Copy Room at HVAC Closet	Good
Linoleum flooring (yellow)	3-5/ ND	Copy Room	Good
Stucco	6-8/ ND	Exterior	Good
Wallboard	9-11/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Handball – Building # 97

Material Description	Sample Number	Material Location	Material Cond.
Plaster	1-3/ ND	Throughout Bldg.	Good
Stucco	4/ ND	Exterior At Offices	Good
Cement	5/ ND	Exterior at Tennis Courts	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Student Center – Building # 86

***Note: Duplicate sample numbers indicates additional site visits.

Material Description	Sample Number	Material Location	Material Cond.
12" Ceiling tile	1-3/ ND	Cafeteria Room 10 and Captain's Restaurant	Good
Wallboard (<1%)	**4-8 / <1% CH**	**Throughout Bldg.**	**Good**
Plaster	9-10/ ND	Exterior Rear Boiler Closet, Captain's Restaurant above ceiling level	Good
Ceiling tile mastic dots	11-12/ ND	Captain's Restaurant Area and Cafeteria Room 10	Good
12" Ceiling tile (semi-rough)	13-15/ ND	Captain's Restaurant Kitchen	Good
Stucco	3,16-19/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Skill Center - Building # 47

Material Description	Sample Number	Material Location	Material Cond.
Transite Panels	**1-3 / 18% CH**	**Room 101, Welding Booths (Qty. 20)**	**Good**
HVAC Duct Seam Tape	**4 (assumed)**	**Room 101**	**Good**
HVAC Duct Vibration Gasket	**5 (assumed)**	**Room 101**	**Good**
Fireproofing	6-8/ ND	Structural Members Throughout	Good
12" Beige Multi-Colored Vinyl Floor Tile & Associated Mastic	**9-11, 27 / 8-10% CH**	**Office 101B, Office 102A and Classroom 103**	**Good**
Black Base Cove	12, 14, 26, 28/ ND	Throughout Bldg.	Good
Base Cove Mastic	13, 15, 25, 29/ ND	Throughout Bldg.	
12" Acoustic Ceiling Tile Mastic (Brown)	16-17/ ND	Room 101 – Hydraulic Press Room	Good

12" Acoustic Ceiling Tile	18-19/ ND	Room 101 – Hydraulic Press Room	Good
Wallboard and associated joint compound (< 1%)	**20, 23-24, 30-32 / <1% CH**	**Throughout Bldg.**	
Green Welding Curtains	21/ ND	Room 101 at north rear of room	Good
White Welding Curtains	**22 / 100% CH**	**Room 101 at north rear of room**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Skill Center – Bldg. # 47 & Middle Classrooms & Bldg. # 48

Material Description	Sample Number	Material Location	Material Cond.
2' x 4' Acoustic Ceiling Tile	1-2, 9/ ND	Room 104	Good
HVAC Duct Seam Tape	3-4/ ND	Throughout Attic	Good
Wallboard and associated joint compound (< 1%)	**5-6 / <1% CH**	**Room 104**	**Good**
Brown Base Cove & Mastic	7-8, 10-11/ ND	Throughout Bldg.	Good
Transite Panels	**assumed**	**Skill Center #47 Middle Classrooms below windows**	**Good**
Woven Fume Ventilation System Gaskets	**assumed**	**Skill Center #47; Welding 101**	Good
12" Acoustic Ceiling Tile and associated mastic	12-13/ ND	Skill Center #48; Computer Lab at Rooms 104/105	Good
Acoustic Ceiling & Wall Panels	14-16/ ND	Airframe Room 110	Good
Transite Panels	**assumed**	**Skill Center # 48; Airframe Room 110**	
12" Beige Multi-Colored Vinyl Floor Tile & Associated Mastic	**17-19 / 4-10% CH**	**Skill Center # 48; Airframe Room 110B Office and 110A Office**	**Good**
Woven Cloth Wall & Ceiling Covering	20-22/ ND	Wind Tunnel/Sound Room	Good
Wallboard and associated joint compound	**23-25 / <1% CH**	**Throughout Airframe 110**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Allied Health- Building #49

Material Description	Sample Number	Material Location	Material Cond.
12" Acoustic Ceiling Tile-Straight Hole pattern	1-3/ ND	Throughout Bldg.	Good
Wall Plaster	4-6/ ND	Throughout Bldg.	Good
Stucco	7-10/ ND	Exterior	Good
Beige Vinyl floor Tile & Associated Mastic	**11-13 / 8-15% CH**	**Room 105; Under Carpet**	**Good**
Brown Base Cove & Mastic	14-16/ ND	Throughout Bldg.	Good
Flooring Mastic (black)	**17 / 5% CH**	**Room 103; Under Carpet**	**Good**
Carpet Glue	**185% CH**	**Room 101**	**Good**
Window Putty (< 1%)	**19-20 / < 1%**	**Exterior**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Horticulture - Building #64

Material Description	Sample Number	Material Location	Material Cond.
Blue Base Cove & associated mastic	1-3/ ND	Room 102	Good
Wallboard with associated joint compound (< 1%)	**4-8 / <1% CH**	**Throughout Bldg.**	**Good**
Wall Plaster	9-10/ ND	Chemical Room (Northeast Unattached Bldg.)	Good
Window Putty	**11-13 / 3% CH**	**Chemical Room (Northeast Unattached Bldg.)**	**Good**
Brown Base Cove & Associated Mastic	**14-16 / 2% AN**	**Room 101**	**Good**
12" Tan With Pattern Vinyl Floor Tile	**17-19 / 10% CH**	**Room 102 at Entry**	**Good**
2' x 3' Acoustic Ceiling Tile	20-22/ ND	Room 103A	Good
Stucco (< 0.1%) pt. count	23-24/ <0.1% CH	Chemical Room (Northeast Unattached Bldg.)	Good
Stucco	25-26/ ND	Small Maintenance Office (Northwest Unattached Bldg.) - near Chemical Room	Good
Cementous Exterior Finish	27-29/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Horticulture Storage – Building #51

- No Access – Steel sided building with no visible suspect materials.

Lewis Applied Science- Building #42

Material Description	Sample Number	Material Location	Material Cond.
Fireproofing	1 (assumed)	Throughout Bldg. On Structural Members	Good
Fireproofing	10, 19, 30/ ND	Throughout Bldg. On Structural Members	Good
2' x 4' Acoustic Ceiling Tile	2, 9, 18, 36-37/ ND	Throughout Bldg.	Good
Wall Plaster	3, 14, 20-21/ ND	Throughout Bldg.	Good
Black Base Cove and associated mastic	**4-7, 38-39 / 2% AN**	**Throughout Bldg.**	Good
12" Acoustic Ceiling Tile	8/ ND	Entry Area	Good
12" Beige Vinyl Floor Tile & Mastic	**11-12, 17 / 2-5% CH**	**Rooms 101, 104, 119, 209, 210, and 211**	**Good**
TSI Pipe Elbows	**13 (assumed)**	**Attic (above Room 104)**	**Good**
12" Beige Multi-Colored Vinyl Floor Tile & Mastic	**15-16 / 2-4% CH**	**Room 103 and 103A**	**Good**
Stucco	**22 (assumed)**	**2nd Floor External Soffit near Café**	**Good**
TSI Pipe Insulation & TSI Elbows (multiple sizes)	**23 (assumed)**	**2nd Floor External HVAC Room**	**Good**
Woven HVAC Expansion Gasket	**24 (assumed)**	**2nd Floor External HVAC Room**	**Good**
HVAC Duct Seam Tape	25/ ND	2nd Floor External HVAC Room	Good
TSI Pipe Insulation & TSI Elbows (multiple sizes)	**26 (assumed)**	**1st Floor Exterior Compressor Room**	
Elbow - 10" Diameter	**27 / 3% CH**	**Southwest Utility Room at Boiler**	**Good**
Stucco	**28**	**2nd Floor External Soffit at South End of Bldg.**	**Good**

	(assumed)		
Insulation at Floor Penetration	29/ ND	1st Floor Exterior Compressor Room	Damage
TSI Pipe Insulation	**31 / 5% CH & 10% AM**	**Southwest Utility Room at Boiler**	**Good**
TSI Pipe Elbow	**32 / 5% CH**	**Southwest Utility Room at Boiler**	**Good**
Wall Plaster-Rough	33-35/ ND	Southwest Utility Room at Boiler	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Walls covered with aluminum siding throughout interior
- No Access – Rooms 212 thru 213

Chemistry– Building #69

Material Description	Sample Number	Material Location	Material Cond.
Fireproofing	**1 (Assumed)**	**Structural Members Throughout**	**Good**
Fireproofing	37-38/ ND	On Structural Members Throughout Bldg.	Good
TSI Elbow	2 / ND	2nd Floor - Room 3; Utility Room	Good
HVAC Duct Expansion Joint	**3 (Assumed)**	**2nd Floor Utility Room 2 (Qty. 6)**	**Good**
HVAC Joint Seam Tape	**4 (Assumed)**	**2nd Floor Utility Room 2**	**Good**
Water/Chiller Line End cap at Gauge	5/ ND	2nd Floor Utility Room 2	Damage
Transite Table Tops	**Assumed**	**Laboratory Room 115 - Throughout**	**Good**
Fire Rated Door	**6,9,11,12 (Assumed)**	**½ & ½ Doors Throughout Middle Office Area (Qty. 4)**	**Good**
Yellow/Brown Sheet Flooring	**7 / 25% CH**	**Room 121**	**Good**
Brown Multi Sheet Flooring	**8,15,16 / 25% CH**	**1st Floor Middle Office Area and All Interior Areas of same**	**Good**
Orange Multi Sheet Flooring	**10,27,28 / 25% CH**	**Throughout Rooms 124 & 126 & 129**	**Good**
Leveling Compound	17/ ND	Room 124 – Under Carpet	Good
Green/Yellow Sheet Flooring	**18-20 / 25% CH**	**Rooms 115 & 118 Throughout**	**Good**
Wallboard with associated joint compound	21-26/ ND	Throughout Bldg.	Good
2" Acoustic Ceiling Tile	29-31/ ND	2nd Floor At Faculty Offices	Good

Yellow/Brown Sheet Flooring	**32-33 / 25% CH**	**Room 124 Middle and Middle Lab Area**	**Good**
2' Acoustic Ceiling Tile	34-36/ ND	Throughout Bldg.	Good
Acoustic Ceiling	39-42/ ND	Lecture Halls	Good
Brown Base Cove & Mastic	43-46/ ND	Throughout Bldg.	Good
Stucco	47-48/ ND	2nd Floor Side Entry near Horticulture Bldg.	Good
Cement Siding- Rough	49-52/ ND	Exterior and at Foyer	Good
Smooth Cement Material	53/ ND	Overhang at Side Entry to 121/118	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Exercise Science– Building #83

Material Description	Sample Number	Material Location	Material Cond.
TSI Elbows-3"	**1 (Assumed)**	**Exercise Lab Attic at Access Panel (Qty. 3)**	**Damage**
TSI Pipe Insulation-3"	**2 (Assumed)**	**Exercise Lab Attic at Access Panel**	**Damage**
TSI Elbows-3"	**3 (Assumed)**	**Exercise Science Classroom; above T-bar ceiling**	**Good**
Black Base Cove	4/ ND	First Floor Exercise Lab	Good
Grey Base Cove	5/ ND	Faculty Office G; 2nd Floor	Good
2' x 3' Acoustic Ceiling Tile	6-8/ ND	Exam Room and North Classroom	Good
9" Beige Vinyl Floor Tile and associated mastic	**9-11 / 3% CH**	**Faculty Office Stairwell and Offices Under Carpet**	**Good**
TSI Elbows-3"	**12 (Assumed)**	**2nd Floor Faculty Offices South Utility Closet at Roof Access**	
TSI Pipe Insulation-3"	**(Assumed)**	**2nd Floor Faculty Offices South Utility Closet at Roof Access**	
HVAC Duct Seam Tape	**13,14 (Assumed)**	**2nd Floor Faculty Offices South Utility Closet at Roof Access**	**Good**
Beige Sheet Flooring	15-18/ ND	**Faculty Office Stairwell**	Good
Ceiling Tile Mastic	19/ ND	1st Floor Exercise Room	Damage
Carpet Glue	**20 / 10% CH**	**1st Floor Exercise Room**	**Good**
Stucco	21-22/ ND	Exercise Science	Good
Wall Plaster	23-24/ ND	Throughout Bldg.	Good
Tan Vinyl Floor Tile and associated mastic	**25-28 / 4-6% CH**	**1st Floor Exercise Science Rooms – Under Carpet**	**Good**
12" Blue Vinyl Floor Tile	**29-32 / 5%**	**2nd Floor Faculty Office – Men's & Women's**	**Good**

with associated mastic	**CH**	**Restrooms**	
2" Acoustic Ceiling Tile (random hole pattern)	33-34/ ND	1st Floor Exercise Lab – Fitness Rooms	Good
12" Acoustic Ceiling Tile (semi rough random hole pattern)	35-36/ ND	1st Floor Exercise Lab – Fitness Rooms	Good
12" Acoustic ceiling Tile-Random Hole	37-39/ ND	2nd Floor Faculty Office Area	Good
Wallboard with associated joint compound (< 1%)	**40-46 / <1% CH**	**Throughout Bldg.**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Social Science– Building #80

Material Description	Sample Number	Material Location	Material Cond.
Fire Rated Door	**1 (Assumed)**	**Utility Room near Classroom 112**	**Damage**
2' Acoustic Wall Tile	2-4/ ND	Throughout Bldg.	Good
Wall Plaster	5-7/ ND	Men's & Women's Restrooms and Utility Room	Good
Window Putty	8/ ND	Room 101	Good
12" Acoustic Ceiling Tile-Random Hole	9-11/ ND	Above T-Bar Ceiling in Rooms 101, 106, 110	Good
Stucco (< 0.1% pt. count)	12-14/ <0.1% CH	Exterior	Good
Cement-Exterior	15/ ND	Exterior	Good
Smooth Coat-Exterior	16-18/ ND	Exterior	Good
2' x 3' Acoustic Ceiling Tiles	19-21/ ND	Throughout Bldg.	Good
Smooth Coat-Interior	22/ ND	Room 101	Good
Rough Coat-Beams	23-26/ ND	Throughout Bldg.	Damage
Wallboard-Joint Comp. (< 1%)	**27-32 < 1% CH**	**Throughout Bldg.**	**Good**
Vinyl Floor Tile & Mastic	**33-39 / 3-10% CH**	**Throughout Bldg. Under Carpet**	**Good**
Leveling Compound	40-41/ ND	Rooms 110 & 112 Under Carpet	Good
Black Base Cove & Mastic	42-43/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Computing Center– Building #73

Material Description	Sample Number	Material Location	Material Cond.
Fireproofing	**1 (Assumed)**	**Exterior Utility Closet near Social Science Bldg.**	**Good**
TSI Pipe Insulation	**2 (Assumed)**	**2nd Floor - Interior Loft Equipment Room near Elevator**	**Sig. Damage**
TSI Pipe Elbows	**3 / 3% CH & 3% AM**	**2nd Floor - Interior Loft Equipment Room near Elevator**	**Slight Damage**
Fire Door	**4 (Assumed)**	**2nd Floor - Interior Loft Room D-12 Equipment**	**Good**
Fire Door	**5 (Assumed)**	**Classroom 105 at Storage Room**	**Good**
9" Beige Vinyl floor Tile	**6 / 3% CH**	**Classroom 105 at Storage Room**	**Good**
Fireproofing	**7 / 10% CH**	**Classroom 6; Above T-Bar Ceiling System**	**Good**
2' x 3' Acoustic Ceiling Tiles	8/ ND	Classroom 6; Above T-Bar Ceiling System	Good
Blue Base Cove	9-10/ ND	Throughout Bldg.	Good
Wall Plaster-Smooth Coat	11-14/ ND	Throughout Bldg.	Good
Wall Plaster-Rough Coat	15/ ND	Room D-12; Ceiling	Good
Vinyl Floor Tile and associated mastic	**16-17 / 4-8% CH**	**At Classroom 105 & Elevator – Under Carpet**	**Good**
Wallboard-Joint Compound (< 1%)	**18-21 / < 1% CH**	**Throughout Bldg.**	**Good**
Stucco	22-24/ ND	Exterior; Overhang	Good
Exterior Smooth Coat	25-26/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Small Doors at Elevator

Business Education– Building #12

Material Description	Sample Number	Material Location	Material Cond.
12" Acoustic Ceiling Tile & Mastic	1/ ND	Room 104 Utility Closet	Damage
Transite Pipe	**2 (Assumed)**	**Room 104 Utility Closet**	**Damage**

Stucco	3/ ND	Exterior	Good
[illegible] x 4' Acoustic Ceiling & Wall Tiles	4, 13-14, 21-22/ ND	Throughout Bldg.	Good
Wallboard-Joint Comp.	5,17-20, 27/ ND	Throughout Bldg.	Good
Black Base Cove & Mastic	6,16/ ND	Throughout Bldg.	Good
Flooring Mastic	7/ ND	Room 104	Good
Stucco	8/ ND	Exterior	Good
9" Grey Vinyl Floor Tile & Mastic	**9-11 / 5-8% CH**	**Exterior Custodial Closet at Room 104**	**Good**
Flooring Bullnose	**12 / 6% CH**	**Exterior Custodial Closet at Room 104**	**Good**
Flooring Mastic	**15 / 3% CH**	**Room 103 – Under Carpet**	**Good**
Tan Vinyl Floor Tile & Mastic	**23-26 / 5-8% CH**	**Rooms 101A & 101B**	**Good**
Window Putty	**28-32 / 3-5% CH**	**Exterior**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Faculty House– Building #11

Material Description	Sample Number	Material Location	Material Cond.
Stucco	1,19-20/ ND	Exterior	Good
12" Pink Vinyl Floor Tile & Mastic	**2-4 / 4-15% CH**	**Main Entry Area**	**Good**
9" Orange Vinyl Floor Tile & Mastic	**5-7 / 5-15% CH**	**Kitchen, Custodial Closet and HVAC Closet**	**Good**
Vent Pipe Gasket	**8 / 4% CH**	**HVAC Closet at vent pipe**	**Good**
White Base Cove & Mastic	9/ ND	Bathroom	Good
Black Base Cove & Mastic	10-11/ ND	Kitchen and Utility Closet	Good
White Cobble Linoleum (Sub Floor)	**12-14 / 6-8% CH**	**Bathroom**	**Good**
Wallboard-Joint Compound (< 1%)	**15-18 / < 1% CH**	**Throughout Bldg.**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Academic Senate Area

- No Access Coast Federation of Educators/AFT Local 1911 Office

Consumer Health Sciences – Building #43

Material Description	Sample Number	Material Location	Material Cond.
12" Acoustic Ceiling Tiles	1-3/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- No Access – Attic or Plenum Area

Literature & Languages– Building #70

Material Description	Sample Number	Material Location	Material Cond.
HVAC Expansion Gasket-Woven	**1,3 (Assumed)**	**1st and 2nd Floor Utility/Equipment Rooms (Qty. 2 Each Room)**	**Good**
HVAC Duct Joint Tape	**2,4 (Assumed)**	**1st and 2nd Floor Utility/Equipment Rooms (Qty. 2 Each Room)**	**Good**
Fire Rated Doors	**5-22 (Assumed)**	**All Doors On First Floor**	**Damage**
Fire Rated Doors	**23 (Assumed)**	**All Doors On Second Floor**	**Damage**
Fireproofing-Spray Applied	24-25/ ND	1st Floor Custodial Room	Good
Formed Cement Wall Finish Material	26-27/ ND	Exterior & Interior	Good
2' x 4' Acoustic Ceiling Tile	28-30/ ND	Throughout Bldg.	Good
Leveling Compound	31/ ND	Room 146 Under Carpet	Good
Black Base Cove & Mastic	32-33/ ND	Throughout Bldg.	Good
Wallboard-Joint Compound (< 1%)	**34-38 / < 1% CH**	**Throughout Bldg.**	**Good**

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Strength Lab – Building #139

Material Description	Sample Number	Material Location	Material Cond.

Black Base Cove & Mastic	1-3/ ND	Throughout Bldg.	Good
llboard-Joint Compound	4-6/ ND	Throughout Bldg.	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Golden West College

Summary of Findings

The following building materials were sampled for asbestos content:

Bolded items indicate asbestos containing materials
ND indicates no asbestos detected in samples

Community Services Building #1

Material Description	Sample Number	Material Location	Material Cond.
Wallboard material	1,101,102, 107/ ND	Throughout Bldg.	Good
Wall Plaster	108,109, 110/ ND	Kitchen Area, Utility Closet	Good
9" x 9" Floor tile (beige) and associated mastic	**2-4 / 5-10% CH**	**Kitchen Area**	**Good**
2' x 3' Ceiling tile	5,105,106/ ND	Office Area	Good
Carpet Glue	111/ ND	Throughout Bldg.	Good
Black Base Cove and Mastic	112,113/ ND	Throughout Bldg.	Good
Stucco	6,103,104/ ND	Exterior	Good

Notes: The following areas were inaccessible on the day this building was surveyed and therefore not known if asbestos is present:

- None

Counseling/Career and Transfer Centers – Building #2

APPENDIX C

INSPECTOR'S CREDENTIALS

State of California
Division of Occupational Safety and Health
Certified Site Surveillance Technician

Erik S Paquette
Name

Certification No. 02-3243

Expires on 03/20/2006

This certification was issued by the Division of Occupational Safety and Health as authorized by Sections 7180 et seq. of the Business and Professions Code.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Grace Herrera
Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation, therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

Bulk samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed by calibrated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. The results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued by a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

Approved Signatory

B..k samples analyzed per 40 CFR 763, Subpart F, Appendix A; EPA-600/R-93/116 and for friable materials, EPA-600/M4-82-020. Samples are analyzed ..librated visual estimation; therefore, results may not be reliable for samples of low concentration levels. This report applies only to the items tested. ..results are representative of the samples submitted and may not represent the entire material from which samples were collected. This report was issued .a NIST/NVLAP (Lab Code 200358-0) accredited laboratory and may not be reproduced without the expressed written consent of Patriot Environmental. This report must not be used to claim product certification, approval or endorsement by NIST, NVLAP or any agency of the federal government.

Samples of wall systems containing discrete and separable layers are analyzed separately and reported as composite. Samples such as floor tiles and ceiling tiles with mastic layers are analyzed and reported separately.

238434-012 No Joint Compound in Sample.

MEMORANDUM

To:	Rachel Struglia
From:	Glenna McMahon, Khristina Leyba
Subject:	Hazards Assessment for Orange Coast College Program EIR 2701 Fairview Road Costa Mesa, CA 92626
Date:	January 10, 2014
Attachment(s):	A - EDR Radius Report, B - County of Orange Environmental Health Records, C - Hazards Interview Questionnaire, D - Aerial Photographs and Topographic Maps, E - Sanborn Fire Maps

This hazards assessment was prepared for the Orange Coast College Vision 2020 Facilities Master Plan Program Environmental Impact Report (EIR). This hazards assessment consists of review and summary of the following data: 1) a database search of regulatory agency records, 2) local environmental health department files for the subject property, 3) historical aerial photographs, historical topographic maps, and Sanborn Fire Insurance maps, 4) interview with the facilities manager, and 5) records on or near the subject property listed on GeoTracker (online database maintained by the Regional Water Board). The objective of the hazards assessment is to determine if there have been any impacts to the proposed project area/subject property due to current or past hazardous materials storage or use.

The subject property consists of an approximately 158-acre parcel in Costa Mesa, California (Figure 1). The subject property is occupied by Orange Coast College and consists of athletic fields, parking lots and buildings (Figure 2). The subject property is bordered by Adams Avenue to the north, Fairview Road to the east, Merrimac Way to the south, and residential homes to the west.

REGULATORY RECORDS REVIEW

Dudek reviewed a regulatory agency records search report conducted by Environmental Data Resources (EDR) on November 4, 2013 (Attachment A). The EDR report listed sixty-eight sites within the American Society for Testing and Materials (ASTM) standard search radii of the subject property.

The subject property was listed in the EDR Report in the following databases: CA AST, CA EMI, CA FID UST, CA HAZNET, CA HIST CORTESE, CA HIST UST, CA NPDES, CA SWRCY, CA SWEEPS UST, CA UST, CA LUST, HIST FTTS, FINDS, FTTS, NY MANIFEST, and RCRA-LQG. Two leaking underground storage tanks (LUST) were reported; both are for gasoline releases to soil only. A release was reported in 1989 and the case was closed on August 31, 1990. Another release was reported in 1999 and the case was closed on February 2, 2000.

Sixty-seven additional sites were identified within the ASTM-specified distances of the subject property. Thirty of these sites are listed in databases associated with permitting and hazardous material storage or disposal. Based on the information provided in the databases for these sites, it is unlikely they have impacted the environmental conditions at the subject property.

Thirty-two sites are listed in the Leaking Underground Storage Tank (LUST) database. For sixteen sites, the LUST listing is for a release to soil only. These sites are located either down or cross-gradient from the subject property and have been granted case closure. The depth to water (DTW) in the area is approximately 77 feet below ground surface (bgs). Of the sixteen sites, one is adjacent to the subject property; "Coast Comm College Dist Admin" is located at 1370 Adam Avenue. This site is listed in the following databases: CA UST, CA SWEEPS, CA SWEEPS UST, CA FID UST, CA HIST CORTEE, and CA LUST. A release to soil occurred on site and was granted closure on August 31, 1990. Given the closed status and soil only release for these sites, it is unlikely they have impacted the environmental conditions at the subject property. Fifteen sites listed in the LUST database are for a release to groundwater. These sites are greater than 1/8 mile from the subject property and have reached case closure. Given the closed status and location of the fourteen sites, they are also unlikely to have impacted the environmental conditions at the subject property.

Of the thirty-two sites, one had a release of gasoline to soil and groundwater. Remediation was performed in 2002 and the case received granted closure on September 12, 2005. This site is located more than 1/2 mile north of the subject property. Given the distance from the subject property and closed status, it is unlikely that this site has impacted environmental conditions at the subject property.

Five sites were listed in the LUST database have an open case status. These sites are discussed below.

1. Shell Service Station at 1201 East Baker Street is located 0.30 mile west northwest of the subject property. The site is listed in the following databases: RCRA-SQG, CA HIST

CORTESE, CA LUST, CA FIS UST, CA SWEEPS UST, and CA EMI. Approximately 80 gallons of gasoline was released during fuel line repairs. According to the *Corrective Action Plan for Monitored Natural Attenuation Report* prepared by Conestoga-Rovers & Associates, soil vapor extraction (SVE) was used to remove over 33,000 pounds of hydrocarbons from the source areas. In addition, 1.6 million gallons of groundwater and approximately 3 pounds of dissolved hydrocarbons were extracted. Based on the June 2013 groundwater monitoring report groundwater depth is approximately 40 feet bgs and groundwater flow is primarily to the southwest. Two groundwater monitoring wells are approximately 0.20 miles northwest of the subject property. Contaminant concentrations of concern are below detection limits in both wells with the exception of benzene in one well. Benzene was 1.1 µg/L; however this concentration is below the Environmental Protection Agency maximum contaminant level (MCL) of 5 µg/L. Given the distance to the subject property and groundwater flow, it is not expected that this site has impacted the environmental conditions of the subject property.

2. Exxon #7-0865 at 1195 Baker Street is located 0.30 mile north northeast of the subject property. The site is listed in the following databases: CA HIST CORTESE, CA LUST, CA FID UST, CA UST, CA HIST UST, and CA SWEEPS UST. Gasoline was released to groundwater in 1992. According to the *Low Threat Closure Report* dated October 1, 2013, the impacted groundwater beneath the site is stable. Based on plume maps presented in the 2012 fourth quarter groundwater monitoring report, contaminant concentrations at the southernmost wells nearest to the subject property were either not detected or below the regulatory limits. According to GeoTracker, this site is eligible for closure as of March 21, 2013. Based on the limited extent of the contaminant plumes and eligibility for closure of this site, it is unlikely that this site has impacted the environmental conditions of the subject property.

3. Mobil Station (18-HNR) site at 3006 Harbor Boulevard is located 0.50 mile northwest of the subject property. The site is listed in the following databases: CA LUST, CA FID, CA SWEEPS UST, and CA CHMIRS. Gasoline was released to groundwater in August 2000. The groundwater flow direction is primarily to the south and the depth to water is approximately 56 feet bgs. The site's environmental consultant, Blaes Environmental, stated that the site has been adequately remediated. According to GeoTracker, the site is eligible for closure as of March 23, 2012. Given the distance and recent eligibility of closure, it is unlikely that the site has impacted the environmental conditions at the subject property.

4. Harbor Fair Exxon Corner Market at 2502 Harbor Boulevard is located 0.35 mile southwest of the subject property. The site is listed in the following databases: CA HIST CORTESE, CA FID UST, CA SWEEPS UST, and CA LUST. Diesel and waste oil were released to groundwater in December 1991. According to GeoTracker, the site is eligible for closure as of October 21, 2012. Based on the distance and downgradient location of the site and recent eligibility of closure, it is unlikely that the site has impacted the environmental conditions at the subject property.

5. Costa Mesa Air National Guard is located 0.73 mile east of the subject property, south of Presidio Drive and west of Newport Boulevard. The site is listed in the following databases: CA HIST Cal-Sites, CA Cortese, CA RESPONSE, CA ENVIROSTOR, and FUDS. The site is an 8.5-acre facility that has been active since 1964. Activities include routine maintenance of vehicles, generators, and various ground equipment. Hazardous wastes resulting from these activities include varying amounts of waste fuels, oils, paints, thinners, and solvents. A preliminary assessment was submitted in December 1990; no further action was concluded. In December 2002, an Environmental Baseline Survey was submitted and a total of nine areas of concern were identified. The Department of Toxic Substances Control (DTSC) requested additional sampling. Given the distance from the subject property and cross-gradient location, it is unlikely that the site has impacted the environmental conditions at the subject property.

The EDR Report identified twelve sites located in Costa Mesa, CA that were not mapped due to limited address information. Dudek further researched the location of each site. Nine of the unmapped sites are not located within one mile of the project area. Two sites are not in any databases indicating a release has occurred. The last listing, Costa Mesa Air National Guard site, is located within one mile of the subject property and was discussed in detail above.

LOCAL AGENCY RECORDS

County of Orange Environmental Health (EH) has records for two closed LUST cases at the subject property (Attachment B). Both of the cases involved fuel releases related to USTs at the college. The records also indicated that an additional UST was removed from near the Maintenance Building.

A release was reported after the removal of three USTs located near the Farm Maintenance Facility located on the west-central portion of the college (A, Figure 3). The USTs (one 1,000-gallon diesel, one 250-gallon weed oil, and one 250-gallon waste oil) were removed in 1988 and the tank pit was excavated to approximately 25 feet bgs. Soil samples analyzed revealed the presence of petroleum hydrocarbons and volatile organic compounds (VOCs). Three soil borings were advanced in June 1989 to a maximum depth of 33 feet bgs. Soil samples collected from the borings showed low concentrations of petroleum hydrocarbons. A letter from the County of Orange EH dated December 5, 1989 stated that aviation fuel was detected in the soil at the site. Two additional borings, one 20° angle and one vertical, were advanced in January 1990 to 40 and 35 feet bgs, respectively. Laboratory analytical results for the soil samples indicated that petroleum hydrocarbons were not detected deeper than 20 feet bgs in the vertical boring; petroleum hydrocarbons were not detected in any of the samples collected from the angle boring. The maximum concentration of petroleum hydrocarbons was 43 mg/kg detected in the vertical boring at 15 and 20 feet bgs. County of Orange EH granted closure for this release in August 1990.

A 1,000-gallon gasoline UST and associated piping was reportedly removed from near the Maintenance Building in August 1998 (B, Figure 3). Soil samples did not indicate the presence of a release and a case was not opened for this UST removal.

Diesel fuel-impacted soils were discovered in October 1999 near the Student Success Building located in the southeastern portion of the college (C, Figure 3). A concrete tank was discovered during trenching activities for seismic retrofitting inside of the building. The building was reportedly formerly used by the U.S. Army as barracks and was likely used to provide fuel for heating the building; the UST was reportedly removed in the 1940s. The concrete UST was located in the southeastern portion of the building that was present on-site prior to the construction of the college. Four soil borings were hand-augered on November 2, 1999 to between 10 and 15 feet bgs. Five soil borings were advanced to between 20 and 30 feet bgs using a direct push drill rig. The maximum concentration of total petroleum hydrocarbons as diesel (TPHd) was 7,400 mg/kg in a sample collected from 15 feet bgs in the boring closest to the former UST. The direct push soil borings soil samples contained a maximum concentration of TPHd of 6,200 mg/kg at 20 feet bgs. TPHd was not detected in soil samples collected from 25 and 30 feet bgs. County of Orange EH granted closure for this release in February 2000.

According to the proposed construction and demolition areas identified in the Orange Coast College Vision 2020 Facilities Master Plan Initial Study (Figures 3 and 4), the tank formerly located in the Student Success building is in an area slated for demoltion. While the case was closed by the county, research indicated that impacted soil may still be present, thus further investigation may be necessary.

INTERVIEW WITH MAINTENANCE AND OPERATIONS DIRECTOR

Mark Goode, Director of Maintenance and Operations for Orange Coast College, was interviewed regarding background information and current uses of the subject property (Attachment C). Mr. Goode has been the Director for about 30 years.

Current use of the property is for education and has been for approximately 62 years. Prior use of the property was a training facility for the Santa Ana Airbase. The property has been used for industrial activities including a recycling facility, gasoline station and an aircraft repair program. The gasoline station is only for equipment and campus vehicles. Aboveground storage tanks (ASTs) contain gasoline and diesel fuel. The aircraft repair program on campus currently has one AST aviation fuel tank (1, Figure 3). According to Mr. Goode, approximately 10 years ago a UST containing aviation fuel was removed; no releases were reported (2, Figure3). Clean fill dirt has been transported onto the subject property for construction purposes. During the interview Mr. Goode identified an area where a pond was located previously (Figure 3), cattle and pigs were kept in the vicinity. The pond was used for irrigation. Mr. Goode stated he had no knowledge of the details of the diesel releases to soil in 1989 and 1990.

Based on the interview with Mr. Goode, the area where cattle and pigs were kept may have potential environmental impacts to the subject property. The two tanks identified by Mr. Goode have no reported releases but are located in the vicinity of planned renovation at building 11 (Figure 4).

AERIAL PHOTOGRAPH REVIEW

Historical aerial photographs from EDR (Attachment D) were reviewed to determine if evidence of recognized environmental conditions was present on the subject property. Historical aerial photographs from 1938, 1947, 1953, 1963, 1972, 1977, 1990, 1995, 2005, 2009, 2010, and 2012 were reviewed.

In the 1938 photograph, the subject property and surrounding areas appear to be used for agriculture. There are a few buildings.

In the 1947 photograph, the subject property appears to be cleared land. At the southern portion of the property, two rows of rectangular buildings are visible. Similar rectangular buildings and a few agricultural fields are visible on surrounding properties.

In the 1953 photograph, the majority of the subject property is developed with a track and baseball field on the eastern portion of the property and buildings on the southern portion of the subject property. The northwestern portion of the subject property still appears to be used for agriculture. More roads are apparent in the surrounding areas and appear mostly unchanged.

In 1963, in the southern portion of the subject property more parking lots and buildings are apparent. The agricultural fields to the south of the property are now a residential development and land to the southeast is cleared.

In the 1972 aerial photograph, a major road (Adams Avenue) now borders the northern end of the subject property. A few campus buildings and a parking lot are visible on the western portion of the subject property; however the majority appears to still be used for agriculture. Adjacent agricultural fields to the west are now replaced with residential housing.

In the 1977 photograph, the subject property appears to be similar to the 1972 photograph. More residential development is visible to the west and north of the subject property. Other surrounding areas appear similar to the 1972 photograph.

In the 1990 photograph, the agricultural fields on the western end of the subject property show expanded parking areas and additional campus buildings. A baseball field and a paved parking lot are now visible southeast of the subject property.

In the 1995 aerial photograph, the northwestern portion of the subject property appears to be cleared land and the remaining parts of the property appear to be similar to the 1990 photograph.

In the 2005 photograph, the northwestern portion of the property is developed with a few campus buildings and an extended parking lot. The rest of the subject property and surrounding areas appear to be similar to the 1995 photograph.

From 2009 to 2012 the subject property and surrounding areas appear to be unchanged.

Aerial photographs indicate that the subject property was used for agricultural purposes; therefore, residual pesticides and metals may be present in the soil.

TOPOGRAPHIC MAP REVIEW

Historical topographic maps from EDR (Attachment D) were reviewed to determine if evidence of recognized environmental conditions was present on the subject property. The historical topographic maps from 1901, 1902, 1935, 1942, 1951, 1965, 1972, and 1981 were reviewed.

In the 1901 topographic map, no development is shown in the vicinity of the subject property. The Newport Beach Branch of the Southern Pacific Railroad runs northeast by southwest several miles to the southeast of the property.

In the 1902 map, no development is shown on the subject property. A few buildings are depicted in the vicinity of the subject property.

In the 1935 map, no development is shown on the subject property. The area south of the subject property is mostly developed. The Santa Ana River is several miles to the west of the subject property.

In the 1942 map, road infrastructure is more prominent near the subject property. The subject property is bordered to the north by Adams Avenue and to the east Old Santa Ana Road. One building is depicted along Adams Ave within the subject property. The Southern Pacific Railroad has been replaced by Newport Boulevard.

In the 1951 map, the subject property is identified as Orange Coast College. Additional road infrastructure extends both north and east of the property. Buildings are depicted in the southern portion of the subject property and in adjacent areas to the north and east.

In the 1965 map, the subject property has been further developed. A track and sports field is now depicted on northern portion of the subject property. Old Santa Ana Road is now named Fairview road. The surrounding areas are depicted as built up areas.

In 1972 map, improvements to Adams Avenue north of the subject property depict the road location similar to present day. The subject property and surrounding areas appear unchanged in both 1972 and 1981 maps.

SANBORN MAP REVIEW

Dudek reviewed historical sanborn fire insurance maps (Attachment E). These provide information regarding historical activities, such as property use, property address, chemical storage and street configuration. Sanborn maps for years 1915, 1922, 1929, and 1932 were reviewed. The subject property is an unmapped property and no maps were reviewed.

SUMMARY

This hazards assessment was conducted for the Orange Coast College Vision 2020 Facilities Master Plan Program EIR. This hazards assessment consisted of research and review of regulatory agency records and historical source information to determine if there have been any environmental impacts to the subject property. Previous impacts to the subject property were identified.

Sixty-seven sites were identified within the ASTM-specified distances from the subject property. Thirty of the sites are listed in databases associated with permitting and hazardous material storage or disposal. Based on the information provided in the databases for these sites, it is unlikely they have impacted the environmental conditions of the subject property. Thirty-two sites were identified in the LUST database, all have received case closure. Given the closed status and information provided in the databases, they are unlikely to have impacted the environmental conditions at the subject property. Five sites were identified in the LUST database and are open cases. Given the distance to the subject property and/or location, these sites are unlikely to have impacted the environmental conditions of the subject property.

Two LUST listings were identified on the subject property. Dudek reviewed records at County of Orange EH regarding the releases. Both cases were due to fuel releases to soil and both cases are closed. According to the Orange Coast College Vision 2020 Facilities Master Plan Initial Study, proposed demolition areas include the Student Success Center where one of the former LUSTs was identified. While the case was closed by the County, impacted soil may still be present, and therefore could be encountered during demolition.

Based on the interview with Mr. Goode, the area where cattle and pigs were kept may have potential environmental impacts to the subject property. The two tanks identified by Mr. Goode have no reported releases but are located in the vicinity of planned renovation at building 11 (Figure 4).

Based on the review of the aerial photographs and topographic maps, aerial photographs indicate that the subject property was used for agricultural purposes; therefore, residual pesticides and metals may be present in the soil.

If construction plans change and the former pond and/or additional tank areas (Figure 3) will be impacted, mitigation measures may be necessary.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 2 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 07/11/2013 has revealed that there are 11 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

CA RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the CA RESPONSE list, as provided by EDR, and dated 09/05/2013 has revealed that there are 2 CA RESPONSE sites within approximately 1 mile of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 09/05/2013 has revealed that there are 7 CA ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

CA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the State Water Resources Control Board Leaking Underground Storage Tank Information System.

A review of the CA LUST list, as provided by EDR, and dated 09/16/2013 has revealed that there are 40 CA LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

CA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the CA UST list, as provided by EDR, and dated 09/16/2013 has revealed that there are 16 CA UST sites within approximately 0.25 miles of the target property.

CA SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the CA SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 8 CA SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 07/11/2013 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 16 EDR US

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR’s review was limited to those categories of sources that might, in EDR’s opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR’s HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 7 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Waste name: 135

Waste code: 151
Waste name: 151

Waste code: 181
Waste name: 181

Waste code: 214
Waste name: 214

Waste code: 223
Waste name: 223

Waste code: 541
Waste name: 541

Waste code: 551
Waste name: 551

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

ORANGE COAST COLLEGE (Continued) **1000315143**

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D011
Waste name: SILVER

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of

ORANGE COAST COLLEGE (Continued) **1000315143**

events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Historical Generators:

Date form received by agency:	09/01/1996
Facility name:	SHELL OIL CO
Classification:	Small Quantity Generator

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:	D018
Waste name:	BENZENE

Violation Status:	No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	P001
Waste name:	2H-1-BENZOPYRAN-2-ONE, 4-HYDROXY-3-(3-OXO-1-PHENYLBUTYL)-, & SALTS, WHEN PRESENT AT CONCENTRATIONS GREATER THAN 0.3%
Waste code:	P042
Waste name:	1,2-BENZENEDIOL, 4-[1-HYDROXY-2-(METHYLAMINO)ETHYL]-, (R)-
Waste code:	P075
Waste name:	NICOTINE, & SALTS
Waste code:	P081
Waste name:	NITROGLYCERINE (R)

Violation Status:	No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

UORS (California - Used Oil Recycling System). California Integrated Waste Management Board (CIWMB) helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	F001
Waste name:	THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Violation Status:	No violations found

Hazardous Waste Summary:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Agency Name:	VELIE CIRCUITS INC.
Agency Address:	1267 LOGAN AVENUE
Agency City,St,Zip:	COSTA MESA 92626
Agency Contact:	GARY KLUECKMAN
Agency Telephone:	7147514994
Agency Type:	Private
SIC Code:	3672
SIC Code 2:	Not reported
Primary Waste:	Stormwater Runoff
Primary Waste Type:	Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.
Secondary Waste:	Not reported
Secondary Waste Type:	Not reported
Design Flow:	0
Baseline Flow:	0
Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info: This site is a printed circuit board manufacturing plant which was operated by Metropolitan Circuits from 1969 to 1981. The facility is presently occupied by Velie Circuits, which has operated a similar manufacturing plant at the location since 1984. During the production of the printed circuit boards, a process was used that involved the plating of copper and other metals. The soils in the chemical handling and storage areas on the site have been contaminated by metals used in this manufacturing process.
The company completed a prior RI/FS in 1985, and developed a RAP for the excavation and removal of contaminated soil. The RAP was approved in February 1986, and the excavation and removal of soil was implemented in September 1986. However, post-excavation sampling revealed that metals were still present in the soils and that they appeared to be increasing in depth. Therefore, in April 1988, the Department issued an RAO to the RPs requiring them to perform additional site characterization and remediation.
In 1990, an approved RI Workplan was implemented which included soil sampling and installing 2 groundwater monitoring wells. Results showed that the extent of copper-contaminated was undefined and volatile organic compound (VOCs) were present in the soil and groundwater.
In 1991, additional RI work was completed. The extent of

METROPOLITAN CIRCUITS (Continued) **S100833316**

copper-contaminated soil was still undefined, the source of VOCs in the soil and groundwater was not identified, and the ground-water flow direction was unclear.
In 1992, a condensed and conservative Health Risk Assessment (HRA) was prepared by the Department based on information pro-vided in the draft RI Report. The HRA concluded that the soil contaminated with metals and concentrations of VOCs in ground-water, if used as a drinking water source, may pose a significant risk.
After the groundwater flow direction was re-determined, addi-tional investigative work was performed. The purpose of the investigation was to define the copper-contaminated soil area and evaluate groundwater conditions at the site using a cone penetro-meter testing (CPT) survey and placing a groundwater monitoring well offsite. The report on this work concluded that available soil and groundwater data for VOCs is insufficient to identify the source or extent of contamination.
Thus, a limited soil investigation was performed in April 1993 for the purpose of determining if site operation contributed to the groundwater contamination of VOCs.

CA BOND EXP. PLAN:

Reponsible Party:	RESPONSIBLE PARTY LEAD SITE CLEANUP WORKPLAN
Project Revenue Source Company:	Not reported
Project Revenue Source Addr:	Not reported
Project Revenue Source City,St,Zip:	Not reported
Project Revenue Source Desc:	The responsible parties are in compliance with an order issued by the Department for oversight/monitoring of their cleanup efforts. DHS has budgeted $50,000 for direct costs related to the project. DHS will recover 100 percent of direct costs plus staff costs and overhead related to the project. The responsible parties will pay all costs associated with cleanup.
Site Description:	This site is a former printed circuit board manufacturing plant which operated from 1969 to 1981. The facility is now occupied by Velie Circuits, which has operated a similar manufacturing plant since 1984.
Hazardous Waste Desc:	The soils in chemical handling and storage areas on the site have been contaminated by heavy metals utilized in The manufacturing process. These substances include copper, lead, and zinc.
Threat To Public Health & Env:	The levels of heavy metals in soil may be increasing with depth, which could represent a potential threat to the ground water. The site is located next to the Paularino Channel which eventually drains to the Upper Newport Bay, a wildlife refuge. There is no known exposure of chemicals to workers at this time because of preventive measures taken at the facility.
Site Activity Status:	The company completed a RI/FS and developed a RAP that was approved by the Department if February, 1986. The RAP was implemented in September, 1986 which entailed excavation and removal of contaminated soil. Post-excavation sampling revealed that metals were still present in soils and may be increasing with depth. In April, 1988, DHS issued a RAO to Metropolitan Circuits and Velie Circuits requiring them to characterize the remaining contamination and develop a second RAP. The characterization work will include ground water investigation to determine if usable aquifers are impacted. This work will commence in Fall 1988.

CHEVRON STATION 9 9915 (Continued) **1000820393**

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D018
Waste name:	BENZENE
Violation Status:	No violations found

FINDS:

Registry ID: 110002896313

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

ORANGE COAST JEEP EAGLE (Continued) **1000315108**

program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Description: The Santa Ana Army Air Base consisted of 1336.102 acres. This was made up of 909.453 acres acquired in fee, by condemnation and purchase, 420.74 acres acquired by lease, 5.771 acres acquired by easement, and 0.138 acres. The site is located In the City of Costa Mesa, Orange County, California. The site, at present, contains the Orange County Fairgrounds, Costa Mesa City Hall, Orange Coast College, Pacific Amphitheater, Southern California Bible College, Air National Guard Station, and several residential and retail tracts. Some of the original buildings were renovated and are being used by the present owners. The lease was terminated when the fee land was conveyed to the College.
The Army Air Corps used the site as a pilot training facility between March 1942 and October 1944. It then became a redistribution center and convalescent hospital and later was a discharge station for returning soldiers.The base was built to serve 20,000 personnel. Finally, before it closed in March 1946, it was a discharge station for soldiers returning from the Pacific. The former site was sold to various entities - Orange Coast College, 32nd Agricultural, and Southern California Bible College. The site currently consists of many residential and retail tracts with approximately 2,800 owners

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Case Type:	Cleanup Program Site
Case Worker:	WDM
Local Agency:	Not reported
RB Case Number:	Not reported
File Location:	Not reported
Potential Media Affected:	Under Investigation
Potential Contaminants of Concern:	* Chlorinated Solvents - PCE, * Chlorinated Solvents - TCE, * Volatile Organic Compounds (VOC)
Site History:	The SIte has contamination with TCE as a result of the past pump manufacturing operation. The TCE plume is aged and has migrated out of the current property boundaries for the most part. Two RPs are conducting environmental work at this SIte: ITT Corporation and the current property owner. ITT is currently conducting groundwater investigation at the downgradient areas of the Site. Obtaining access to the downgradient properties has been very challenging. The property owner has completed the on-site investigation. A focused FS

ITT / JABSCO FACILITY (Continued) **S108542997**

report has been submitted and ISCO has been approved as the technology for remediating the groundwater. A bench scale test was conducted for this remedy. No specific source of contamiantion was found in the on-Site soil. An NFA letter for the on-Site soil was issued on August 5, 2011. On-Site monitoring wells ITT-4, ITT-5 and INJ-1 were abandoned in December 2011. An off-Site downgradient investigation for groundwater was completed in September 2011 and based on the low detections of VOCs in those areas, no further investigation of the off-Site downgradient area is necessary. The monitring frequency for all the on- and off-Site remaining wells has been redcued to semi-annual. An NFA letter for on-Site groundwater was issued on August 1, 2013. An NFA letter for off-Site groundwater was issued on August 21, 2013.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Violation Status: No violations found

FINDS:

Registry ID: 110012220907

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Background Info:	The Costa Mesa ANG station is an 8.5 acre facility that has been active since 1964. The facility is located on former Santa Ana A rmy Air Base property. Activities include routine maintenance of vehicles, generators, and various ground equipment. Hazardous w astes resulting from these activities include varying amounts of waste fuels, oils, paints, thinners, and solvents. A preliminary assessment was submitted in December 1990 where a recommendation for NFA was concluded.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 04/26/2013
Date Data Arrived at EDR: 05/09/2013
Date Made Active in Reports: 07/10/2013
Number of Days to Update: 62

Telephone: 415-947-4246

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/26/2013
Date Data Arrived at EDR: 05/09/2013
Date Made Active in Reports: 07/10/2013

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 08/06/2013

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Target Property Map:	33117-F8 NEWPORT BEACH (DIGITAL), CA
Most Recent Revision:	0

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

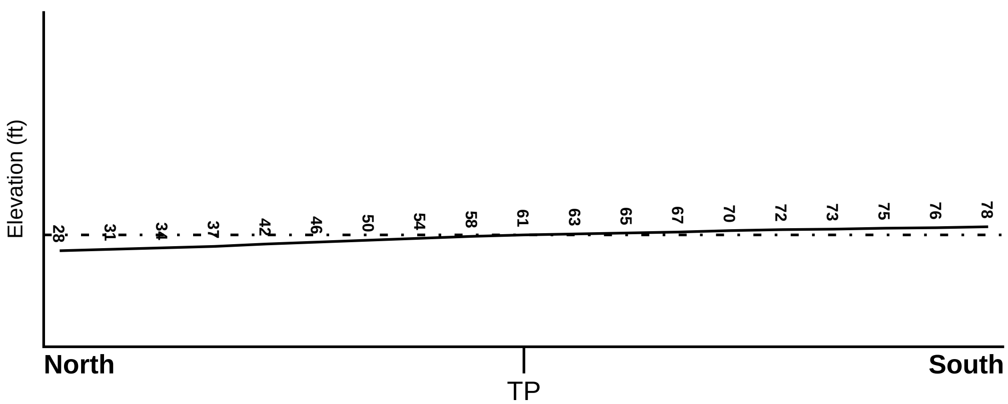
TOPOGRAPHIC INFORMATION

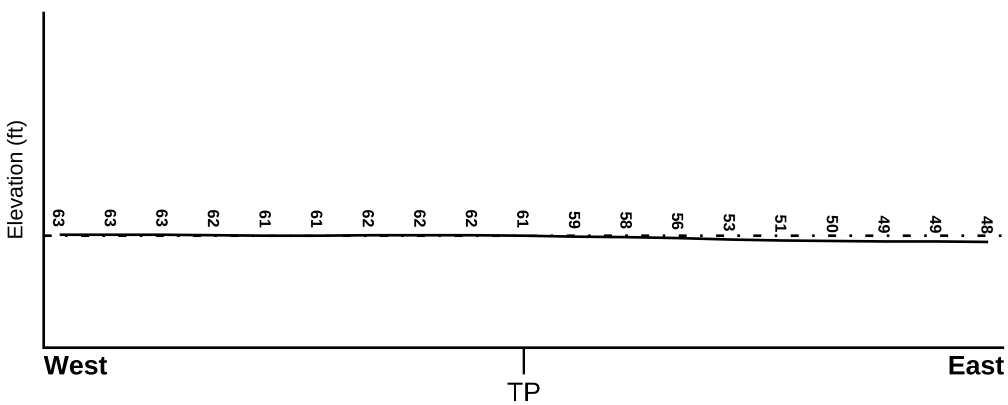
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 61 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
ORANGE, CA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 06059C - FEMA DFIRM Flood data

Additional Panels in search area: Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
COSTA MESA	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CROPLEY

Soil Surface Texture: clay

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)
1	0 inches	29 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6
2	29 inches	59 inches	clay	Not reported	Not reported	Max: 1.4 Min: 0.42	Max: 8.4 Min: 6.6

Soil Map ID: 2

Soil Component Name: MYFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**		**Soil Reaction (pH)**
1	0 inches	22 inches	sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 6 Min: 5.1
2	22 inches	27 inches	sandy clay	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 8.4 Min: 5.6
3	27 inches	38 inches	sandy clay loam	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 8.4 Min: 5.6
4	38 inches	70 inches	sandy clay loam	Not reported	Not reported	Max: 0.42 Min: 0.01	Max: 8.4 Min: 6.1
5	70 inches	79 inches	sandy loam	Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 6.1

Soil Map ID: 3

Soil Component Name: MYFORD

Soil Surface Texture: sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)
1	0 inches	11 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 14	Max: 6 Min: 5.1
2	11 inches	18 inches	sandy clay	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 5.6
3	18 inches	27 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 5.6
4	27 inches	70 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.42 Min: 0.01	Max: 8.4 Min: 6.1
5	70 inches	79 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay. FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 6.5 Min: 6.1

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Health Services
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation

Re: Underground Storage Tank (UST) Case
Orange Coast College
2701 Fairview Road
Costa Mesa, CA 92626
OCHCA Case #99UT55

Dear Mr. Kollmeyer:

This letter confirms the completion of site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this Agency was accurate and representative of site conditions, this Agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25299.37 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.77 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (h) of Section 25299.37 of the Health and Safety Code.

Please contact Arghavan Rashidi-Fard of our office at (714) 667-3713 if you have any questions regarding this matter.

Sincerely,

Jack Miller, REHS, Director
Environmental Health

III. Release and Site Characterization Information (Continued)

Maximum Documented Contaminant Concentrations - - Before and After Cleanup									
Contaminant	Soil (ppm)		Water (ppm)		Contaminant	Soil (ppm)		Water (ppm)	
	Before	After	Before	After		Before	After	Before	After
TPH (diesel)	7400	same			MTBE	ND(1.4)	same		
Benzene	.200	same							
Toluene	.200	same							
Ethylbenzene	.200	same							
Xylenes	.600	same							

Comments (Depth of Remediation, etc.): **A portion of a concrete tank and diesel contaminated soil was discovered inside the building during earthquake retrofitting activities. The U.S. Army apparently abandoned the tank in place when they left the base in late 1940's when the property was turned over to the college district. A grab soil sample from 3 feet below grade (fbg) was collected by the college environmental health and safety staff for analysis. The results confirmed the presence of diesel contaminated soil. A site assessment consisting of drilling nine borings around the former tank was conducted to determine the extent of the soil contamination. The total depths of the borings extended between 10 to 30 fbg. The highest TPH concentrations ranging between 6000 and 7400 ppm were detected in samples collected from 15 and 20 foot samples in three borings (B-1, B-5 and B-6). The sample with the 7400 ppm at 15' in boring B-1 was not analyzed for BTEX and MTBE. The other samples with 6200 ppm TPH collected from B-6 at 20' and 6000 ppm TPH collected from B-5 at 15' did not show BTEX above the detection limit and or the MCLs. Also, MTBE was not detected above the detection limits of .700 and 1.4 ppm in the samples with 6000 and 6200 ppm TPH, respectively. (The MTBE results were detected by EPA Method 8021.) A ten foot clean zone was delineated in borings B-5 and B-6.**

No further work is recommended for this site since the extent of the soil contamination is limited and the samples did not show concentrations of volatile aromatic hydrocarbons in the soil that would pose a threat to public health or the groundwater that may occur at depth greater than 40 fbg.

IV. Closure

Does completed corrective action protect *existing* beneficial uses per the Regional Board Basin Plan? **Yes**		
Does completed corrective action protect *potential* beneficial uses per the Regional Board Basin Plan? **Yes**		
Does corrective action protect public health for current land use? **Yes**		
Site management requirements: **None**		
Should corrective action be reviewed if land use changes? **No**

COMMENTS

** Previous Owner- Santa Ana Army Air Base - United States Military Base
The leak was detected under a building structure than has been in place since CCCD purchased the property. Leak may have been from a fuel storage tank used to heat a personnel military barracks. Substance most likely to be fuel oil (diesel).

IELD ACTIVITY DESCRIPTIO

Orange Coast College, 2701 Fairview Rd, Costa Mesa
Facility Name

PC # ______ TI # ______ LUST # 99UT55 IR # ______

Inspector: Nighavan Rashidi-Fard Date: 11-9-99 Time: 2:15pm

Field Activity: On-site to observe a concrete (half of a) tank discovered during seismic retrofitting inside a building by the footings. Soil contamination was encountered and some borings were drilled to identify contaminants.
This area use to be the barracks for the Santa Ana Base which operated until the late 1940's.
A report containing the investigation will be submitted.
There was no staining observed in the excavation but there was definite diesel odor.

Soil Assessment Report
Orange Coast Community College
Building #7
Costa Mesa, California

Dear Ms. Parks:

This letter report presents the results of the soil assessment conducted by Harding Lawson Associates (HLA) at the Coast Community College District's (CCCD's) Orange Coast Community College (OCCC) facility located between Adams Avenue, Merrimac Way, Harbor Boulevard, and Fairview Road in Costa Mesa, California (Plate 1). The objective of the investigation was to assess the vertical and lateral extent of soil containing total petroleum hydrocarbons as diesel (TPHd) in the previous area of a suspected heating fuel underground storage tank (UST) (Plate 2).

BACKGROUND

CCCD personnel informed HLA that soil with petroleum hydrocarbon odors was encountered during excavations for earthquake retrofitting. The apparently hydrocarbon impacted soil was observed to be adjacent to a 6-foot-diameter vertically oriented cylindrical concrete structure suspected to be a former fuel oil UST. On October 27, 1999, CCCD health and safety personnel collected a grab soil sample at approximately 3-feet below ground surface (bgs) from the open sidewall of the excavation and analyzed it for total petroleum hydrocarbons as gasoline (TPHg), TPHd, and benzene, toluene, ethylbenzene, and xylenes (BTEX). The TPHg and TPHd results were reported as 16 milligrams per kilogram (mg/kg) and 820 mg/kg, respectively. Each of the BTEX results was reported as not detected. CCCD personnel requested that HLA assess the soil impact.

Based on a November 29, 1999 telephone conversation with Ms. Argavahn Rashidi-Fard of the Orange County Health Care Agency (OCHCA), depth to groundwater at sites near the intersection of Fairview Road and Baker Street ranges from 35 to 54 feet bgs. Ms. Rashidi-Fard also indicated that depth to groundwater near the intersection of Harbor Boulevard and Adams Avenue has been measured at 75 feet bgs. Based on conversations with CCCD employees, previous geotechnical soil assessments conducted at the OCCC campus indicate that groundwater was not encountered in soil borings drilled to depths of 40 feet bgs.

November 30, 1999
48900 1
Ms. Maggie Parks
Coast Community College District
Page 2

SOIL INVESTIGATION

The following soil investigation activities were performed during the reporting period:

- On November 2, 1999, four soil borings (B-1 through B-4, see Plate 2) were drilled by hand-auger method in the previous area of the suspected UST. Boring B-1 was drilled to a total depth of 15 feet bgs. Borings B-2, B-3, and B-4 were drilled to total depths of 10 feet bgs. Soil samples were collected at 2.5-foot intervals and screened in the field using a photoionization detector (PID). Each sample was taken to Del Mar Analytical in Irvine, California, under chain-of-custody documentation for TPHd analysis by EPA Test Method 8015 Modified. Soil analytical results are summarized in Table 1 and depicted on Plate 3. Laboratory data sheets are included in Attachment A.

- On November 5, 1999, five additional soil borings (B-5 through B-9) were drilled inside Building #7 to depths ranging from 20 to 30 feet bgs. The soil boring locations are shown on Plate 2. Soil samples were collected at 5-foot intervals, logged by an HLA scientist, and taken to Del Mar Analytical in Irvine, California, for TPHd analysis by EPA Test Method 8015 Modified. Based on the analytical results, selected soil samples were additionally analyzed for BTEX and methyl tertiary butyl ether (MTBE). Soil analytical results are summarized in Table 1 and depicted on Plate 3. Laboratory data sheets are included in Attachment A. Soil boring logs are included in Attachment B. Field procedures for soil boring installation and sample collection are included as Attachment C.

RESULTS OF THE SOIL INVESTIGATION

A review of the soil investigation results indicates the following:

- TPHd was reported in soil borings B-1, B-2, B-4, B-5, B-6, and B-9. The highest TPHd levels were detected in soil samples collected near the west and south areas of the suspected UST.

- Soil borings B-1, B-5, and B-6, which are nearest to the west and south perimeter of the UST, indicate that TPHd concentrations above 5,000 mg/kg are present in soil from ground surface to 15 or 20 feet bgs. Soil samples collected at or below 25 feet bgs in this area were not reported to contain detectable quantities of TPHd, indicating that assessment of the vertical extent in the suspected source area is complete.

- Soil borings B-4, B-7, and B-9, which are located southeast and southwest of the UST, indicate that relatively lower concentrations of TPHd, ranging from 1,300 mg/kg to 3,700 mg/kg, are present at 5 to 10 feet bgs. Soil samples collected at or below 15 feet bgs in these three soil borings were reported to contain below 10 mg/kg TPHd, indicating that assessment of the vertical extent in these areas is complete.

November 30, 1999
48900 1
Ms. Maggie Parks
Coast Community College District
Page 3

- Soil borings B-2, B-3, and B-8, located north and northeast of the UST, indicate that TPHd was not detected in these areas with the exception of a reported concentration of 20 mg/kg in B-1 at 2.5 feet bgs.

- Laboratory chromatographs for soil samples collected from soil borings B-1 through B-4 indicate that the detected petroleum hydrocarbons are within the diesel range. Refer to Attachment A for copies of the chromatographs.

- Results of the soil investigation indicate that although delineation of the entire TPHd impact was not completed, sufficient soil data have been collected to assess the general area, depth, and TPHd concentrations of impacted soil.

RECOMMENDATIONS

HLA recommends no further action at this site regarding the hydrocarbon-impacted soil due to the limited vertical and horizontal extent of hydrocarbons, lack of significant BTEX detections, no MTBE detections, and presence of groundwater at least 20 feet below the depth of detected petroleum hydrocarbons.

If you have any questions regarding this report, please contact the undersigned at 949/260-1800.

Very truly yours,

IJ29191S	Method Blank	N.D.	N.D.	N.D.	N.D.	N.D.
Dilution: 1.0	Reporting Limit	1.0	0.0050	0.0050	0.0050	0.015

Volatile Fuel Hydrocarbons are quantitated against a gasoline standard. Hydrocarbons detected by this method range from C6 to C12. Analytes reported as N.D. were not present at or above the reporting limit. Dilution factors are due to matrix effects and/or other factors.

2171 Campus Drive, Ste. 100
Irvine, CA 92612
Attention: Dave DeVries

Client Project ID: 48827
CCCD
Analysis Method: EPA 3550/CA DHS Mod. 8015B
First Sample #: IK00769

Sampled: 11/5/99
Received: 11/5/99
Extracted: 11/5/99
Analyzed: 11/9/99-11/12/99
Reported: 11/12/99

EXTRACTABLE FUEL HYDROCARBONS (CA DHS Mod. EPA 8015B)

Laboratory Number QC Batch	Sample Description Soil	Sample Result mg/Kg (ppm)	Reporting Limit mg/Kg (ppm)	Dilution Factor	Hydrocarbon Type
IK00769 IK05DE2S	B5-15	6,000	500	100	C8-C28
IK00770 IK05DE2S	B5-20	N.D.	5.0	1.0	N.A.
IK00771 IK05DE2S	B5-30	N.D.	5.0	1.0	N.A.
IK00772 IK05DE2S	B6-5	2,500	100	20	C8-C28
IK00773 IK05DE2S	B6-20	6,200	500	100	C8-C28
IK00774 IK05DE2S	B6-25	N.D.	5.0	1.0	N.A.
IK00775 IK05DE2S	B6-30	N.D.	5.0	1.0	N.A.
IK00776 IK05DE2S	B9-10	3,700	500	100	C8-C28
IK00777 IK05DE2S	B9-20	7.8	5.0	1.0	C8-C28
IK00778 IK05DE2S	B9-30	N.D.	5.0	1.0	N.A.

Extractable Hydrocarbons are quantitated against a diesel fuel standard. Hydrocarbons detected by this method range from C8 to C40. Analytes reported as N.D. were not present at or above the reporting limit. Dilution factors are due to matrix effects and other factors.

MS/MSD DATA REPORT

EPA METHOD: 8015 Ext.
Matrix: Soil

Date Analyzed: 11/6/99

Sample: IK00711

Batch: IK05DE2S

Analyte	R1	Sp	MS	MSD	PR1	PR2	RPD	MEAN PR	Acceptance Limits	
	mg/Kg	mg/Kg	mg/Kg	mg/Kg	%	%	%	%	RPD	MPR
Hydrocarbons	8.10	33.3	42.7	45.1	104%	111%	5.5%	108%	40	40-110

Definition of Terms:

R1. Result of Sample Analysis
Sp. Spike Concentration Added to Sample
MS. Matrix Spike Result
MSD. . . . . Matrix Spike Duplicate Result
PR1. . . . . Percent Recovery of MS; ((MS-R1) / SP) X 100
PR2. . . . . Percent Recovery of MSD; ((MSD-R1) / SP) X 100
RPD. . . . . Relative Percent Difference; ((MS-MSD)/(MS+MSD)/2) X 100
Acceptance Limits. . . . Statistically determined on an annual basis.

ATTACHMENT C

FIELD PROCEDURES

FIELD PROCEDURES

All drilling activities were supervised by a Harding Lawson Associates (HLA) scientist, who logged the borings and collected soil samples. Each proposed boring location was hand augered to a depth of approximately 5 feet prior to drilling to confirm the absence of subsurface utilities.

Field Equipment

Borings were drilled by hand auger methods or by Vironex, Inc. of Santa Ana, California, with a Geopropbe direct push equipped rig. Soil samples were collected with a 1.5-inch outside diameter by 24-inch long barrel sampler lined with four 1-inch outside diameter by 6-inch long brass tubes. The sampler was driven into undisturbed soil using the drill rigs hydraulics.

The breathing zone of workers was monitored for volatile organic compounds using a photoionization detector (PID). The PID was calibrated to a hexane standard prior to the start of work each day. Field screening of soil samples was also conducted with a PID calibrated to a hexane standard.

Drilling and Soil Sampling

All downhole equipment was fully decontaminated prior to drilling each boring. Upon retrieval, the sampler was disassembled and sampling tubes were separated using a sampling knife. Soil samples were screened with a PID using both the headspace-reading methods. The headspace-reading method consisted of placing a small quantity of soil collected from the shoe of the sampler into a resealable plastic bag, and allowing VOCs to volatilize approximately 15 minutes. The soil vapor in the plastic bag was then monitored by inserting the probe of the PID into the bag, and measuring and recording the VOC reading. Samples exhibiting the highest PID measurements were generally selected for laboratory analysis.

Each sample tube was covered at both ends with Teflon sheets and capped with plastic caps. Labels with job designation, time, boring number, sample depth interval, sample number, date sampled, and the initials of the field geologist were attached to each sample tube. The samples were then individually enclosed in plastic bags and stored in ice-chilled coolers prior to and during shipment. The ice used to maintain cooler temperature was double-bagged in plastic bags.

Soil samples from the direct push borings were logged following the Unified Soil Classification System (USCS), which conforms to ASTM Method D2488-90, under the direct supervision of an HLA geologist.

Upon completion of soil sampling, the borings were backfilled to the surface with granular bentonite. The soil cuttings were placed on the existing stockpile inside building #7.

Decontamination

The soil sampler and downhole equipment were decontaminated by washing in a Liqui-Nox and water solution, and rinsing with potable and distilled water, respectively. Clean, new brass tubes were used as the two lowermost sampling tubes for each drive. The uppermost sampling tube was decontaminated as described above, and reused.

Subject: Remedial Action At Orange Coast Community College, 2701 Fairview, Costa Mesa, CA 92626 - O.C.H.C.A. Case #88UT91

Dear Mr. Harrie:

This letter confirms the completion of site investigation and remedial action at the above site. With the provision that the information provided to this Agency was accurate and representative of existing conditions, it is the position of this office that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code or Water Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional or previously unidentified conditions at the site which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the property owner's responsibility to notify this Agency of any changes in report content, future contamination findings, or site usage.

If you have any questions regarding this matter, please contact Arghavan Rashidi-Fard at (714) 667-3713.

Very truly yours,

Livio F. Davanzo, Ph.D., R.E.A.

ITEM NO.

to Gene Harris of OCC, the pit was "overexcavated" and filled with "clean fill." (10/25/88 Activity log). Pit was then cemented over. On 6/22/89, an initial vertical boring was drilled to 33' below grade. Three samples were collected at 20', 25' and 33'. Samples were analyzed for TPH, TRPH and BTXE. The only contamination was 3.2 ppm TRPH at 33'. On 1/30/90 two additional borings, one slanted + one vertical, were drilled to 36' below grade to complete site investigation. Nine samples were taken and analyzed for TPH, TRPH and BTXE. All lab results from nine samples were non-detect except 43 ppm TRPH in one boring (OCC-3) at 15' + 20' below grade. However two additional samples taken from the same boring (OCC-3) at 25' and 30' below grade were non-~~det~~detect.

Spoils from this site were mixed with spoils from adjacent cleanup site (OCHCA case # 89 UT 198) and treated chemically. After verification sampling showed soil clean, soils were left on site.

Present contamination is within allowable.

APPENDIX A

SOIL SAMPLING AND HEADSPACE ANALYSIS PROCEDURES

APPENDIX A

SOIL SAMPLING AND HEADSPACE ANALYSIS PROCEDURES

A.1 Soil Sampling Procedures

1. Drilling was conducted using a drilling rig equipped with 7-inch, 8-inch, and 11-inch outside diameter hollow stem augers. All the augers were steam cleaned prior to being used.

2. The soil samples were collected with a split-barrel sampler lined with pre-washed brass and/or stainless steel tubes. Each sampler was driven approximately 18 inches with a 140-pound hammer dropping approximately 30 inches per blow. The number of blows used to drive the sampler each six inches was then recorded.

3. Either the lowermost or second lowermost tube from each sampler was removed from the sampler and capped on each end with heavy-duty aluminum foil and polyethylene end caps. The edges of the end caps were secured with electrical tape.

4. The samples were labeled with the boring number, date, and project number, and then placed in a plastic Ziploc bag.

5. The samples were stored in an ice chest cooled with ice to approximately 40 degrees Fahrenheit prior to being transported to a California Department of Health Services (DOHS) state-certified hazardous waste laboratory under chain-of-custody procedures.

6. The sampling equipment was washed between samples with a solution of water and trisodium phosphate, rinsed twice with tap water, and finally rinsed with deionized water.

A.2 Headspace Analytical Procedures

1. Soil from each sampled interval was extracted from the shoe of the sampler for a headspace analysis and placed in a plastic Ziploc bag. The bag was filled with approximately 50 grams of soil and closed.

2. After agitating the soil sample and then allowing it to sit for approximately three to four minutes, the probe of a portable organic vapor meter (OVM) was inserted through an opening in the bag and a reading was taken in the headspace.

3. The OVM used was an Hnu Systems, Inc. Model PI 101 photoionizer equipped with a 10.2 eV probe calibrated to 58 ppmv benzene.

4. The detection range reported by the manufacturer is 0.1 ppmv to 2,000 ppmv for benzene, and is reported to be similar for other volatile organic (hydrocarbon) compounds (VOCs).

CONTENTS

EXECUTIVE SUMMARY

Harding Lawson Associates (HLA) was retained by Coast Community College District (CCCD) to remove one underground storage tank (UST) and prepare this closure report. The tank was associated with Orange Coast College's maintenance equipment storage area.

The fuel dispensing area consisted of one 1,000-gallon UST (gasoline), one fuel dispenser, and associated piping. According to CCCD, the tank was installed in 1990 with a primary wall constructed of steel and a secondary wall constructed of fiberglass.

Between August 10 and 11, 1998, the dispenser, piping, and UST were removed by Quest Environmental. Under the direction of the Orange County Health Care Agency (OCHCA), soil samples were collected beneath the UST and dispenser. Samples were submitted to a State of California certified laboratory for analyses of total petroleum hydrocarbons as gasoline (TPHg); benzene, toluene, ethylbenzene, and xylenes (BTEX); and methyl tertiary butyl ether (MTBE). The soil excavated from the tank, dispenser, and piping areas was stockpiled at the Site.

The results of the laboratory analyses indicated that TPHg, BTEX, and MTBE were not detected in the soil samples collected beneath the USTs and piping. However, MTBE was detected in soil samples collected beneath the dispenser.

Based upon the analytical data collected during the tank removal, the tank and dispenser excavation was backfilled with the stockpiled soil as well as with clean, imported soil. The soil was compacted to a minimum of 93 percent maximum dry density.

1.0 INTRODUCTION

Harding Lawson Associates (HLA) was contracted by Coast Community College District (CCCD), Costa Mesa, California, to prepare this tank closure report for one fuel underground storage tank (UST) formerly located in the maintenance equipment storage area of Orange Coast College (Plates 1 and 2). This report documents the removal and disposal of the tank, the collection and disposal of tank rinsate, and the results of soil sampling. HLA performed environmental services for UST removal at the Site during the period August 10 through 14, 1998.

Tank removal, excavation, backfilling, and compaction services were performed by Quest Environmental (Brea, California) under contract to CCCD. Laboratory services were provided by Del Mar Analytical (Irvine, California) under contract to HLA. The laboratory is certified by the California Department of Health Services. Offsite transportation and disposal services of the UST and rinsate were coordinated by Nieto and Sons Trucking, Inc., which was contracted by Quest Environmental. This work was performed under the supervision of a State of California certified engineering geologist and in accordance with an Orange County Health Care Agency (OCHCA) closure permit (No. 98-299). HLA provided job coordination, site supervision, air monitoring, soil sampling, and reporting services.

2.0 SITE DESCRIPTION

The Site is a former fuel dispensing area used by the Orange Coast College Maintenance and Operations Department. The fuel dispensing area consisted of one fuel UST (one 1,000-gallon unleaded fuel tank), one dispenser, and associated product piping (Plate 3). According to CCCD, the tank was installed in 1990 with a primary wall constructed of steel and a secondary wall constructed of fiberglass. The UST was used from 1990 until July 1998, when it was taken out of service.

3.0 SCOPE OF WORK

The project scope of work consisted of the following activities:

- Removing interior fencing, surface concrete, and asphalt
- Performing air monitoring during all activities associated with substructure and grading excavations
- Removing the dispenser, product lines, and tank
- Collecting and analyzing soil samples as instructed by OCHCA Inspector Arghavan Rashidi-Fard
- Providing oversight of backfilling and compaction
- Preparing this report for submittal to CCCD and OCHCA

HLA's fieldwork and soil sampling activities were performed in accordance with our standard field procedures outlined in Appendix A. The work was also performed in accordance with the OCHCA-approved tank closure permit, which is included in Appendix B.

3.1 Underground Storage Tank Removal

On August 10, 1998, the product dispenser was removed. Approximately 250 gallons of clean fuel was removed from the UST before the process of removing the dispenser could start. The surface concrete and asphalt covering the tank and product lines were removed, and the tops of the tank and product lines were exposed. Organic vapor analyzer (OVA) readings were conducted per the South Coast Air Quality Management District's (SCAQMD) Rule 1166, "Volatile Organic Compound Emissions from Decontamination of Soil." OVA readings indicated 2 parts per million by volume (ppmv) of volatile organic compounds during tank and product line exposure. Results of air monitoring conducted during the removal of the UST, dispensers, piping, and soil are included in Appendix C.

On August 11, 1998, the tank was triple rinsed and rendered inert using dry ice until the interior atmosphere of the tank was below the lower explosive limit. The tank rinsate fluids were pumped from the tank and transported by Nieto and Sons Trucking, Inc., of Anaheim, California, to DeMenno Kerdoon of Compton, California, for recycling. The tank and product lines were removed under the direction of Fire Prevention Inspector Bill Halley of the Costa Mesa Fire Department (CMFD). During removal, the tank was observed by HLA to be in good condition with no evidence of cracks, holes, or spillage. The tank was transported by Nieto & Sons Trucking, Inc., to Adams Steel in Anaheim, California, where the tank was scrapped, crushed, and destroyed in a safe and legal manner according to standard practices. Copies of the rinsate manifests and certificate of tank destruction are included as Appendix D.

As instructed by OCHCA Inspector Rashidi-Fard, two confirmatory soil samples were collected. The first sample was collected at approximately 11 feet below ground surface (bgs), which was 2 feet below the tank invert. The second sample was collected approximately 1 foot below the former dispenser location. Soil samples were submitted to the laboratory for analyses of total petroleum hydrocarbons as gasoline (TPHg); benzene, toluene, ethylbenzene, and xylenes (BTEX); and methyl tertiary butyl ether (MTBE). All laboratory certificates of analysis are included in Appendix E.

As shown in Table 1 and on Plate 3, no petroleum hydrocarbons, BTEX, or MTBE was detected in soil sample HLA-01. However, soil sample HLA-02, collected below the former dispenser location at approximately 1 foot bgs, was found to contain MTBE at a concentration of 0.051 milligram per kilogram (mg/kg). To obtain a more accurate analysis of MTBE in sample HLA-02, an EPA 8260 (Mod.) analysis was performed. The MTBE concentration was found to be 0.21 mg/kg. As instructed by OCHCA Inspector Rashidi-Fard, a second, confirmatory soil sample was collected (S-1) at 2.5 to 3.0 feet below the former dispenser location. This sample did not contain detectable concentrations of petroleum hydrocarbons, BTEX, or MTBE.

3.2 Backfilling, Compaction, and Restoration Activities

Approximately 9 cubic yards of fill was imported from Livingston Graham for excavation backfilling. On August 14, 1998, the UST excavation was backfilled. Compaction was accomplished by using a backhoe with a vibratory plate. Geo Environ performed compaction testing under contract to Quest Environmental. The required minimum 90 percent relative compaction was achieved. The compaction report is included in Appendix F.

4.0 SUMMARY AND CONCLUSIONS

The results of the tank, product line, and dispenser removals and associated soil investigations are summarized as follows:

- The tank was removed and disposed of in accordance with the guidance provided by the OCHCA and CMFD.
- The only detectable chemical in the soil samples collected below the UST or dispenser was MTBE at a concentration of 0.21 mg/kg. According to the OCHCA, this MTBE does not warrant remediation.

Based on the information provided in this report, HLA recommends that the OCHCA close the UST and that no additional environmental work related to the former fuel tank and dispenser area be performed. The tanks and lines have been removed and disposed in accordance with all applicable regulations.

APPENDIX A

STANDARD FIELD PROCEDURES

SOIL SAMPLE TRACKING, STORAGE, AND HANDLING

1.0 PURPOSE

The purpose of this procedure is to describe the process for soil sample handling, inventory, and processing.

2.0 SCOPE

Numerous soil samples will be collected during soil borings and surface soil sampling. Some of these samples may be analyzed for their physical properties, some will be sent to a chemical laboratory for analysis, and some will be retained for possible future analysis. This procedure describes the handling and processing controls imposed on those samples that arrive at HLA offices for storage and/or analysis.

3.0 EQUIPMENT AND MATERIALS

The following equipment and materials will be utilized during soil sample handling, inventory and processing:

- Completed boring log,
- Permanent ink pen (i.e., Sharpie),
- Red pen, and
- Completed chain-of-custody (COC) form.

4.0 PROCEDURES

4.1 Sample Handling

1. After each sample is collected and screened, the COC form will be filled out for all samples. The sample identification number will be placed in the station described/notes columns. A different COC form will be filled out for each laboratory receiving samples.

2. Fill out sample tags and affix them to tubes or mason jars. Label core boxes as appropriate.

3. Place sample containers pending chemical analysis in cooler, on ice, until transported to the laboratory or HLA office. Samples for chemical analysis will be delivered to the laboratory within 48 hours of collection.

4. The field geologist/engineer responsible for sample collection will fax a photocopy of the COC form to the responsible geologist/engineer.

5. Tube soil samples and core will be location and depth indexed and will be stored for future reference until any soil remediation required is completed.

4.2 Receipt of Non-Analytical Samples and Boring Log Editing

1. Upon arrival at HLA, the non-analytical samples will be placed on the sample receiving table by the person delivering them, and that person will notify the responsible engineer/geologist of their arrival.

2. Samples will be placed in inventory and logged upon their arrival by the laboratory technician. Inventory may be delayed if it conflicts with boring log editing or if the sample will be immediately tested. If samples are not going to be immediately tested or there is a delay prior to boring log editing, samples will be placed into inventory upon their arrival.

4. The editor of the boring log will mark up/line out the log in red pen with corrections as necessary. Original boring log entries will not be erased. After edit completion, the boring log will be signed by the editor in the spaces provided.

5. Tube soil samples and core will be location and depth indexed and will be stored for future reference until any soil remediation required is completed.

4.3 Laboratory Testing

1. The responsible geologist/engineer will check the COC form to ensure that the correct tests have been requested.

2. The responsible geologist/engineer then will notify the field engineer/geologist, who in turn will notify the laboratory that samples are ready for pickup, and the laboratory will arrange for sample transportation. The engineer/geologist may alternately transfer the samples to the laboratory directly from the field.

3. The white copy of the COC form will be signed by the laboratory upon sample receipt. HLA will retain two copies of the COC form (pink copy returned with results).

SOIL SAMPLING USING HAND AUGER AND DRIVE-SAMPLING EQUIPMENT

1.0 PURPOSE

The purpose of this procedure is to describe the process for collecting soil samples using hand auger and drive-sampling equipment.

2.0 SCOPE

Hand augering and drive sampling will be performed to collect soil samples for laboratory analysis. The work will be performed by an HLA employee or by an HLA subcontractor under the direct supervision of a qualified geologist or engineer.

3.0 EQUIPMENT AND MATERIALS

- Hand auger, drive sampler, and extension rods
- Slide hammer
- Brass or stainless steel sample tubes, teflon seals, and end caps
- Sample labels
- Ziploc storage bags
- Cooler
- Ice
- Chain-of-custody forms

4.0 PROCEDURE

A hand auger will be used to complete a boring to the desired sampling depth. If refusal is encountered at any location, another attempt may be made to advance the sampler after stepping-over approximately 5 feet. If the hand auger continues to be refused, alternate soil sampling techniques will be used, such as the use of a backhoe and "potholing" in the area of the proposed sample location. At that point, a drive-sampler may be used to collect a sample near the teeth of the bucket.

After the boring is completed to the desired depth into the soil, a soil sample will be collected from the bottom of the boring. An attempt will be made to fill the sample tube completely with soil. The tube will then be removed from the sampler and sealed using teflon seals and end caps. Finally, the sample tube will be labeled, placed in a Ziploc bag, and stored in an ice chest for transport to the analytical laboratory.

All sample tubes, hand auger, and drive sampling equipment will be decontaminated before the collection of each sample.

VARIOUS LOCATIONS
RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

Reference is made to your Application (A/N 334421) received on November 21, 1997, for the excavation and handling of VOC-contaminated soil at **various locations** within the South Coast Air Quality Management District.

This excavation and mitigation plan has been approved under the provisions of Rule 1166 of the Rules and Regulations of the SCAQMD and is subject to the following conditions.

PLAN CONDITIONS: PROPERTY OWNER'S INITIALS

1. AT LEAST 24 HOURS PRIOR TO COMMENCING EXCAVATION OF UNDERGROUND TANKS OR TRANSFER PIPING WHICH HAVE STORED OR TRANSFERRED VOLATILE ORGANIC COMPOUNDS (VOC), THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED BY TELEPHONE OF ALL INFORMATION ITEMS LISTED IN RULE 1166(c)(1)(B) AND THE NAME OF THE COMPANY PERFORMING THE EXCAVATION. THE NOTIFICATION SHALL BE MADE BY CALLING (909) 396-3886, DURING NORMAL BUSINESS HOURS. AT THE TIME OF THE NOTIFICATION, A REFERENCE NUMBER SHALL BE OBTAINED FROM THE SCAQMD AND RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT. [____]

   REFERENCE NO:______________ NOTIFICATION DATE:____________

2. THIS PLAN IS VALID ONLY FOR THE EXCAVATION AND HANDLING OF A MAXIMUM OF <u>2000 CUBIC YARDS</u> OF VOC-CONTAMINATED SOIL AT EACH SITE. EXCAVATION OF A GREATER AMOUNT REQUIRES SUBMITTAL OF A SITE SPECIFIC RULE 1166 EXCAVATION PLAN. [____]

3. THE EXCAVATION OPERATOR SHALL HAVE ON SITE AN ORGANIC VAPOR ANALYZER (OVA) USING FLAME IONIZATION OR PHOTO IONIZATION OR OTHER ANALYTICAL METHODS COMPLYING WITH 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3, "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS". [____]

4. THE OVA SHALL BE CAPABLE OF BEING CALIBRATED USING HEXANE AT A RANGE OF 0 PART PER MILLION BY VOLUME (PPMV) TO 50 PPMV AND AT A DETECTION RANGE OF AT LEAST 30 PPMV TO 1100 PPMV. THE OVA SHALL BE INITIALLY CALIBRATED USING HEXANE OR OTHER CALIBRATION GAS AS SPECIFIED BY THE MANUFACTURER. THE OVA SHALL BE CALIBRATED AT LEAST ONCE AT THE BEGINNING OF EACH WORKING DAY WITH THE PROCEDURES SPECIFIED BY THE MANUFACTURER. IF A CALIBRATION GAS OTHER THAN HEXANE IS USED, THE OBSERVED READINGS SHALL BE CONVERTED TO AND EXPRESSED AS HEXANE BASED ON CONVERSION FACTORS PROVIDED BY THE MANUFACTURER [ ]

5. DURING EXCAVATION, MONITORING SHALL BE CONDUCTED TO MEASURE VOCS AT A DISTANCE NO MORE THAN 3 INCHES ABOVE THE FRESHLY DUG SOIL BY USING AN ORGANIC VAPOR ANALYZER (OVA) DESCRIBED UNDER CONDITION 4. THIS MEASUREMENT SHALL BE MADE FOR EVERY LOAD OF SOIL AND SHALL BE TAKEN NO LONGER THAN THREE (3) MINUTES AFTER EACH LOAD OF SOIL IS EXCAVATED. [ ]

6. ALL MONITORING SPECIFIED IN CONDITION NO. 5 SHALL BE CONDUCTED BY TRAINED PERSONNEL WHO ARE PROFICIENT IN THE USE OF THE HYDROCARBON MONITOR SELECTED FOR USE AT THIS SITE. [ ]

7. WRITTEN RECORDS OF OVA MONITORING AND CALIBRATIONS REQUIRED ABOVE SHALL BE KEPT IN A FORMAT APPROVED BY THE SCAQMD THE APPROVED FORMAT IS INCLUDED WITH THIS PLAN. THE CERTIFICATION ON ALL RECORDS SHALL BE SIGNED AND DATED ON THE DAY THE MEASUREMENTS ARE OBSERVED. [ ]

8. THE EXCAVATION SHALL BE CONDUCTED IN 50 FT. X 50 FT. OR SMALLER SECTIONS TO MINIMIZE EXPOSURE OF SOIL POTENTIALLY CONTAMINATED WITH VOC TO THE ATMOSPHERE. [ ]

9. VOC CONTAMINATED SOIL IS A SOIL WHICH REGISTERS A CONCENTRATION OF 50 PPM OR GREATER OF VOLATILE ORGANIC COMPOUNDS, WHEN MEASURED AT A DISTANCE OF NO MORE THAN THREE INCHES FROM THE SURFACE OF THE EXCAVATED SOIL WITH AN ORGANIC VAPOR ANALYZER OR EQUIVALENT (CALIBRATED TO HEXANE). IF OTHER CALIBRATING GASES WERE USED, THEN THE MEASURED READINGS SHALL BE CORRELATED TO AND EXPRESSED AS HEXANE. [ ]

10. UPON DETECTION OF VOC CONTAMINATED SOIL (READINGS 50 PPM OR GREATER), THE EXECUTIVE OFFICER OR DESIGNEE SHALL BE NOTIFIED WITHIN 24 HOURS OF THE FIRST DETECTION OF VOC CONTAMINATION. THE NOTIFICATION SHALL BE MADE BY CALLING (909) 396-3886. AT THE TIME OF THE NOTIFICATION A REFERENCE NUMBER SHALL BE OBTAINED FROM THE SCAQMD AND RETAINED AS PROOF OF COMPLIANCE WITH THIS REQUIREMENT. [ ]

REFERENCE NO:______________ NOTIFICATION DATE:____________

11. ALL VOC-CONTAMINATED SOIL SHALL BE STOCKPILED SEPARATELY FROM NON-VOC-CONTAMINATED SOIL AND KEPT MOIST WITH WATER OR WITH A FUME SUPPRESSANT TO PREVENT EMISSIONS OF VOC OR PARTICULATES. [ ]

12. A STOCKPILE SHALL NOT CONTAIN MORE THAN 400 CUBIC YARDS OF SOIL. [____]

13. IF THE OVA MEASUREMENT IS BETWEEN 50 PPMV AND 1000 PPMV, THE WORKAREA AND LOAD OF SOIL SHALL BE SPRAYED WITH WATER AND/OR APPROVED VAPOR SUPPRESSANT. [____]

14. IF THE OVA MEASUREMENT EQUALS OR IS GREATER THAN 1000 PPMV, [____]
    A) THE WORKING AREA SHALL BE SPRAYED WITH WATER OR AN APPROVED VAPOR SUPPRESSANT, AND

    B) THE SOIL DUG UNDER THE ABOVE CONDITIONS SHALL BE STORED IN SCAQMD APPROVED CONTAINERS, AND

    C) IN LIEU OF CONTAINERS, OTHER MITIGATION MEASURES MAY BE SUBSTITUTED WITH PRIOR WRITTEN APPROVAL FROM THE SCAQMD.

15. ANY STOCKPILES OF VOC-CONTAMINATED SOIL EXPOSED FOR HANDLING SHALL BE COVERED DURING PERIODS OF INACTIVITY LONGER THAN ONE (1) HOUR. DURING THE PERIOD THE STOCKPILE IS UNCOVERED, THE EXPOSED SOIL SHALL BE KEPT MOIST WITH WATER. AT THE END OF EACH WORKING DAY, ALL STOCKPILES SHALL BE COVERED WITH A HEAVY DUTY CONTINUOUS CLEAR PLASTIC SHEETING (>=8MIL THICK), JOINED AT THE SEAMS, AND SECURELY ANCHORED TO PREVENT ANY EXPOSURE OF SOIL TO THE ATMOSPHERE. [____]

16. VOC-CONTAMINATED SOIL SHALL NOT BE SPREAD ON-SITE OR OFF-SITE. THIS INCLUDES ANY UNNECESSARY MOVEMENT OR AGITATION OF SOIL THAT MAY CAUSE THE UNCONTROLLED EVAPORATION OF VOCS INTO THE ATMOSPHERE. [____]

17. THE OWNER OR OPERATOR SHALL SUBMIT A WRITTEN RECORD WHICH INCLUDES: [____]

    A) METHOD TO TREAT THE VOC-CONTAMINATED SOIL, SCHEDULES TO HAUL THE SOIL AWAY, BACKFILL THE SOIL, OR OTHER MEANS OF DISPOSAL/TREATMENT.

    B) THE RECORD SHALL ALSO INDICATE THAT THE NECESSARY PERMITS HAVE BEEN OBTAINED OR ARE IN THE PROCESS OF BEING OBTAINED.

18. ALL VOC-CONTAMINATED SOIL SHALL BE BACKFILLED, REMOVED FROM THE SITE, OR TREATED USING ONSITE PROCESSES APPROVED BY THE SCAQMD WITHIN 40 DAYS OF IT'S EXCAVATION. WHERE ONSITE TREATMENT IS USED, SUCH PROCESSES SHALL BE IN PLACE ON THE SITE AND OPERATING PRIOR TO THE DATE SPECIFIED IN THIS CONDITION [____]

19. ALL VOC-CONTAMINATED SOIL REMOVED FROM THE SITE SHALL BE TRANSPORTED TO AN APPROVED TREATMENT/DISPOSAL FACILITY. IF THE RECEIVING FACILITY IS LOCATED WITHIN THE SCAQMD'S JURISDICTION, IT SHALL BE THE RESPONSIBILITY OF THE APPLICANT TO ENSURE THAT THE RECEIVING FACILITY HAS OBTAINED THE REQUIRED SCAQMD PERMITS AND/OR PLANS. [____]

20. RECORDS OF TREATMENT/DISPOSAL SHALL BE MAINTAINED FOR ALL VOC-CONTAMINATED SOIL REMOVED FROM THIS SITE. SUCH RECORDS SHALL BE CLEARLY LABELED "**SCAQMD RULE 1166 - VOC CONTAMINATED SOIL**" AND INCLUDE IDENTIFICATION AND LOCATION OF: THE GENERATOR, THE TRANSPORTER AND THE RECEIVING FACILITY. IN ADDITION, SUCH RECORDS SHALL BE SIGNED AND DATED BY EACH OF THE ABOVE PARTIES INDICATING RECEIPT OR RELINQUISHMENT OF THE VOC-CONTAMINATED SOIL AT THE TIME CUSTODY IS TRANSFERRED. [____]

21. RECORDS OF DISPOSAL OR TREATMENT OF VOC-CONTAMINATED SOIL SHALL BE MAINTAINED FOR A PERIOD OF TWO (2) YEARS AND MADE AVAILABLE TO SCAQMD PERSONNEL UPON REQUEST. [____]

22. WITHIN THIRTY (30) DAYS OF THE INITIAL EXCAVATION OF THE VOC CONTAMINATED SOIL AT EACH SITE, THE WRITTEN RECORDS UNDER CONDITIONS NO. 7 AND 17 SHALL BE SUBMITTED TO THE SCAQMD AT THE FOLLOWING ADDRESS. [____]

    SCAQMD
    STATIONARY SOURCE COMPLIANCE DIV.
    RULE 1166 COMPLIANCE SECTION
    21865 E. COPLEY DR.
    DIAMOND BAR, CA. 91765-4182

23. THIS PLAN IS NOT VALID FOR EXCAVATING VOC-CONTAMINATED SOILS AT LANDFILLS OR SITES USED FOR DISPOSAL OF REFUSE OR OTHER TYPES OF WASTE. [____]

24. THIS PLAN DOES NOT ALLOW THE TREATMENT OF VOC-CONTAMINATED SOIL BY CHEMICAL, BIOLOGICAL OR MECHANICAL PROCESSES. ANY OF THE ABOVE TREATMENT PROCESSES REQUIRES A SEPARATE PERMIT TO OPERATE FROM THE SCAQMD. [____]

25. A COPY OF THIS PLAN SHALL BE PRESENT AT EACH EXCAVATION SITE DURING ALL SOIL HANDLING AND STORAGE PROCESSES. [____]

26. THIS EXCAVATION PLAN IS VALID FOR TWO YEARS FROM ISSUANCE. [____]

27. THIS PLAN IS NOT VALID UNTIL THE VERIFICATION BELOW IS SIGNED. [____]

I ______________________________, AM THE OWNER OR DESIGNATED REPRESENTATIVE FOR THE OWNER OF THE PROPERTY LOCATED AT ____ (SITE OF THE EXCAVATION). I VERIFY THAT I HAVE READ, UNDERSTOOD, AND HAVE INITIALED EACH CONDITION OF THIS PLAN. IN DOING SO, I ACKNOWLEDGE THAT THE OWNER ALSO ASSUMES RESPONSIBILITY FOR THE REQUIREMENTS SET FORTH IN THIS PLAN.

Other governmental agencies may require approval before any excavation begins. It shall be the responsibility of the applicant to obtain that approval. The South Coast Air Quality Management District shall not be responsible or liable for any losses because of measures required or taken pursuant to the requirements of this approved 1166 Contaminated Soil Mitigation Plan.

If you have any questions concerning this plan, please call Stephen O. Ngwu at (909) 396 2355.

Very truly yours,

Tran D. Vo, P.E.
Senior Air Quality Engineer

APPLICATION NO. 280792
COMPANY ID 52749

RULE 1166 CONTAMINATED SOIL MITIGATION PLAN

Reference is made to your Application (A/N 280792) received on April 29, 1993, for the excavation and handling of VOC-contaminated soil at various locations within the South Coast Air Quality Management District.

Your excavation and mitigation plan has been approved under the provisions of Rule 1166 of the Rules and Regulations of the SCAQMD and is subject to the following conditions.

PLAN CONDITIONS: PROPERTY OWNER'S INITIALS

1. AT LEAST 24 HOURS PRIOR TO COMMENCING EXCAVATION OF UNDERGROUND TANKS WHICH HAVE STORED VOLATILE ORGANIC COMPOUNDS (VOC), THE EXECUTIVE OFFICER SHALL BE NOTIFIED OF ALL INFORMATION ITEMS LISTED IN RULE 1166(c)(1)(A) AND THE NAME OF THE COMPANY PERFORMING THE EXCAVATION. [_____]

   IF VOC-CONTAMINATED SOIL IS DETECTED, THE EXECUTIVE OFFICER SHALL BE NOTIFIED AGAIN WITHIN 24 HOURS. BOTH NOTIFICATIONS SHALL BE MADE BY CALLING (909) 396-3886, MONDAY THROUGH FRIDAY, BETWEEN 8 A.M. AND 5 P.M.

2. THIS PLAN IS VALID ONLY FOR THE EXCAVATION AND HANDLING OF A MAXIMUM OF 2000 CUBIC YARDS OF VOC-CONTAMINATED SOIL AT EACH SITE. EXCAVATION OF A GREATER AMOUNT REQUIRES SUBMITTAL OF A SITE SPECIFIC RULE 1166 EXCAVATION PLAN. [_____]

3. ALL VOC-CONTAMINATED SOIL SHALL BE DISPOSED, BACKFILLED, OR REMOVED FROM THE SITE WITHIN 40 DAYS AFTER IT HAS BEEN EXCAVATED FROM THE AFFECTED AREAS. [______]

RECORDS OF DISPOSAL OR TREATMENT OF VOC-CONTAMINATED SOIL SHALL BE MAINTAINED FOR A PERIOD OF TWO (2) YEARS AND MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST.

4. THE OWNER OR OPERATOR SHALL PREPARE A WRITTEN PLAN WHICH INCLUDES METHODS TO TREAT THE VOC-CONTAMINATED SOIL, SCHEDULES TO HAUL THE SOIL AWAY, BACKFILL THE SOIL, OR OTHER MEANS OF DISPOSAL. THE PLAN SHALL ALSO INDICATE THAT THE NECESSARY PERMITS HAVE BEEN OBTAINED OR ARE IN THE PROCESS OF BEING OBTAINED. SUCH A PLAN SHALL BE PREPARED NO LATER THAN 5 DAYS AFTER THE COMPLETION OF THE EXCAVATION, AND SHALL BE MADE AVAILABLE TO DISTRICT PERSONNEL UPON REQUEST. [______]

5. THE EXCAVATION SHALL BE CONDUCTED IN 50 FT. X 50 FT. OR SMALLER SECTIONS TO MINIMIZE EXPOSURE OF SOIL POTENTIALLY CONTAMINATED WITH VOC TO THE ATMOSPHERE. [______]

6. THE EXCAVATION OPERATOR SHALL HAVE ON SITE AN ORGANIC VAPOR ANALYZER (OVA) USING FLAME IONIZATION OR PHOTO IONIZATION OR OTHER ANALYTICAL METHODS COMPLYING WITH 40 CFR PART 60 APPENDIX A, EPA METHOD 21 SECTION 3.1.1.a., "DETERMINATION OF VOLATILE ORGANIC COMPOUND LEAKS, MONITORING INSTRUMENT SPECIFICATIONS". [______]

7. THE OVA SHALL BE CAPABLE OF BEING CALIBRATED USING HEXANE AT A RANGE OF 0 PARTS PER MILLION BY VOLUME (PPMV) TO 50 PPMV AND AT A DETECTION RANGE OF AT LEAST 50 PPMV TO 1100 PPMV. THE OVA SHALL BE INITIALLY CALIBRATED USING HEXANE BY THE MANUFACTURER AND CALIBRATED AT LEAST ONCE AT THE BEGINNING OF EACH WORKING DAY WITH THE PROCEDURES SPECIFIED BY THE MANUFACTURER. [______]

8. DURING EXCAVATION, MONITORING SHALL BE CONDUCTED TO MEASURE VOC'S AT A DISTANCE NO MORE THAN 3 INCHES ABOVE THE FRESHLY DUG SOIL BY USING AN ORGANIC VAPOR ANALYZER (OVA) DESCRIBED UNDER CONDITION 7. THIS MEASUREMENT SHALL BE MADE FOR EVERY LOAD OF SOIL AND SHALL BE TAKEN NO LONGER THAN THREE (3) MINUTES AFTER EACH LOAD OF SOIL IS EXCAVATED. [______]

9. WRITTEN RECORDS OF OVA MONITORING AND CALIBRATIONS REQUIRED ABOVE SHALL BE KEPT IN A FORMAT APPROVED BY THE DISTRICT. A TYPICAL FORMAT IS ATTACHED WITH THIS PLAN. [______]

10. VOC-CONTAMINATED SOIL IS A SOIL WHICH REGISTERS 50 PPMV OR MORE WHEN MEASURED WITH AN ORGANIC VAPOR ANALYZER (CALIBRATED USING HEXANE) AT A DISTANCE OF NO MORE THAN THREE INCHES ABOVE EXCAVATED AND EXPOSED SOIL. [______]

11. IF THE OVA MEASUREMENT IS BETWEEN 50 PPMV AND 1000 PPMV, [______]

A) THE WORKING AREA SHALL BE IMMEDIATELY SPRAYED WITH WATER, OR COVERED WITH CLEAN SOIL OR TREATED WITH A DISTRICT APPROVED SUPPRESSANT, AND

B) EACH VOC-CONTAMINATED LOAD OF SOIL SHALL BE SPRAYED WITH WATER OR TREATED WITH A DISTRICT APPROVED VAPOR SUPPRESSANT AND BE STOCKPILED SEPARATELY.

12. IF THE OVA MEASUREMENT EQUALS OR IS GREATER THAN 1000 PPMV, [______]

A) THE WORKING AREA SHALL BE SPRAYED WITH WATER OR DISTRICT APPROVED VAPOR SUPPRESSANTS OR COVERED WITH AT LEAST 4 INCHES OF CLEAN SOIL, AND

B) THE SOIL DUG UNDER THE ABOVE CONDITIONS SHALL BE STORED IN DISTRICT APPROVED CONTAINERS, AND

C) IN LIEU OF CONTAINERS, OTHER MITIGATION MEASURES MAY BE SUBSTITUTED WITH PRIOR WRITTEN APPROVAL OF THE EXECUTIVE OFFICER, IF THE OWNER OR OPERATOR CAN DEMONSTRATE THAT AN ALTERNATIVE MEASURE IS EQUALLY OR MORE EFFECTIVE IN REDUCING VOC EMISSIONS. PRIOR TO THE EXECUTIVE OFFICER'S APPROVAL, THE OWNER OR OPERATOR SHALL SUBMIT A COMPREHENSIVE WRITTEN STUDY WHICH COMPARES QUANTITATIVELY THE ESTIMATED VOC EMISSIONS DIFFERENCE BETWEEN THE ALTERNATIVE MITIGATION MEASURES.

13. ALL VOC-CONTAMINATED SOIL SHALL BE STOCKPILED SEPARATELY FROM NON VOC-CONTAMINATED SOIL AND KEPT MOIST, COVERED OR SPRAYED WITH WATER OR WITH A FUME SUPPRESSANT TO PREVENT EMISSIONS OF PARTICULATES OR VOC. [______]

14. AT THE END OF EACH WORKING DAY, ALL STOCKPILES SHALL BE COVERED WITH A HEAVY DUTY CONTINUOUS PLASTIC SHEET(S), JOINED AT THE SEAMS, AND SECURELY ANCHORED TO PREVENT ANY EXPOSURE OF SOIL TO THE ATMOSPHERE. [______]

15. A STOCKPILE SHALL NOT CONTAIN MORE THAN 450 CUBIC YARDS OF SOIL. [______]

16. WITHIN 5 DAYS AFTER THE EXCAVATION IS COMPLETED AT EACH SITE, THE WRITTEN RECORDS UNDER CONDITIONS 4 AND 9 SHALL BE SUBMITTED TO THE DISTRICT AT THE FOLLOWING ADDRESS. [______]

SCAQMD
STATIONARY SOURCE & COMPLIANCE DIV.
SERVICE STATION TEAM
21865 E. COPLEY DR.
DIAMOND BAR, CA. 91765-4182

17. VOC-CONTAMINATED SOIL SHALL NOT BE SPREAD ON-SITE OR OFF-SITE TO CAUSE THE EVAPORATION OF UNCONTROLLED VOC TO THE ATMOSPHERE. [______]

18. THIS PLAN IS NOT VALID FOR EXCAVATING VOC-CONTAMINATED SOILS AT LANDFILLS OR SITES USED FOR DISPOSAL OF REFUSE OR OTHER TYPES OF WASTE. [______]

19. THIS PLAN DOES NOT ALLOW ANY TREATMENT OF VOC-CONTAMINATED SOIL. [______]

20. A COPY OF THIS PLAN SHALL BE PRESENT AT EACH EXCAVATION SITE DURING ALL SOIL HANDLING AND STORAGE PROCESSES. [______]

21. THIS PLAN IS NOT VALID UNTIL THE VERIFICATION BELOW IS SIGNED. [______]

I ______________________, AM THE OWNER OF THE PROPERTY LOCATED AT ______________________________ (SITE OF THE EXCAVATION). I VERIFY THAT I HAVE READ, UNDERSTOOD, AND INITIALED EACH CONDITION OF THIS PLAN.

______________________ ______________________
SIGNED DATE

Other governmental agencies may require approval before any excavation begins. It shall be the responsibility of the applicant to obtain that approval. The South Coast Air Quality Management District shall not be responsible or liable for any losses because of measures required or taken pursuant to the requirements of this approved 1166 Contaminated Soil Mitigation Plan.

If you have any questions concerning this plan, please call Mr. Arthur Lawler at (909) 396-2533.

Very truly yours,

Brian L. Yeh

EPA METHOD: **8015/8020**
Matrix: Soil

Date: 8/12/98

Batch #: HH12G11S

Analyte	Spike Conc.	Result	% Recovery	ACP
TPH	1.0	1.1	112%	80-120%
Benzene	0.10	0.10	103%	80-120%
Toluene	0.10	0.11	112%	80-120%
Ethylbenzene	0.10	0.11	105%	80-120%
Xylenes	0.30	0.31	105%	80-120%

Definition of Terms

LCS .... Laboratory Control Sample

Spike Conc. .... Spike concentration added to blank

Result .... Result of Laboratory Control Sample Analysis

% Recovery .... Percent Recovery of LCS; ((Result-Spike Conc.)/Spike Conc.)X 100

ACP .... Acceptance Limits for Percent Recovery

TPH .... Total Petroleum Hydrocarbons

Brea, CA 92621

Subject: In-Place Density Test Results for the Tank Excavation Backfill
Orange Coast College
1371 Adams Avenue, Costa Mesa, Orange County, California.

Dear Mr. Gebhart:

Submitted herewith is a report of in-place density test results for the tank excavation backfill on the subject site. Field density test results are presented in the Summary Sheet in Appendix 'A. The approximate location of the field density tests, excavation areas, and other pertinent dates are shown on the attached plot plan in Appendix 'B'.

Date Of Observation

August 13, 1998

Grading Equipment

Backhoe with Vibratory Plate

Grading & Field Operation

The subject tank area was excavated to approximately 12 feet below the existing site grade and the size of the excavation was approximately 10'x 12'.

The excavation bottom was compacted prior to fill placement. Excavated on-site pea gravel were used to backfill the excavation to within 1.5' of existing grade. The pea gravel were placed at one foot thick horizontal lifts and rolled properly to maximize the consolidation of gravel. The remainder of the excavation was then backfilled with crushed aggregate base materials and compacted to within existing site grade.

See the summary sheet in Appendix 'A' for the description of the fill materials and the density test results.

Density Testing

In-place density tests were performed in general accordance with Sand Cone Method ASTM D-1556 procedures at a frequency sufficient to verify the moisture content and degree of compaction obtained. Maximum dry density of the fill soil was obtained in general accordance with ASTM D-1557 procedures.

Conclusion

The tank excavation backfill was placed and compacted to a minimum relative compaction of 93% of maximum dry density.

The excavation backfill are determined to be suitable for support for pavement for parking and driveway areas only. If buildings or structures are planned in the excavation backfill areas, a geotechnical investigation must be conducted to evaluate the fill and natural soils for specific supports of the buildings or structures.

Our observation and testing of the backfill materials did not include any environmental assessment of the backfill materials or opinions relating to possible soil or subsurface contamination by hazardous or toxic substances.

Closure

This evaluation was performed in accordance with generally accepted engineering practices. The conclusions and recommendations contained in this report were based on the data available and the interpretation of such data as dictated by our experience and background. Hence, our conclusions and recommendations are professional opinions; no other warranty is offered or implied.

This opportunity to be of service is appreciated. If you have any further questions regarding this matter, please contact our office at your earliest convenience.

Respectfully submitted,

Costa Mesa, CA 92626

Attention: Mr. Gene Harrie

Dear Mr. Harrie:

Enclosed are the results of the treatment of the petroleum hydrocarbon contaminated soil located on the Orange Coast College campus. The treatment was carried out by Tri Coast Engineering of Costa Mesa on Oct. 15, Oct. 31, and Nov. 1, 1988. The treatment process is known as chemical fixation and uses HCC-104 developed by ALWS under the supervision of Dr. Kasi Gabbita.

The enclosed report was prepared by ALWS and is accompanied by support data from two independent labs: Edward S. Babcock & Sons, Inc. (P.O. Box 432, Riverside, California, 92505, phone 714 684-1881) and MBC Applied Environmental Sciences,(947 Newhall St., Costa Mesa, California, 92627, phone, 714 646-1601).

Utilizing the analytical data obtained from this study, the Department of Health Services can now evaluate the soil for hazardous waste declassification. Should you have any questions regarding this report, please contact Dr. Kasi Gabbita of ALWS at (818) 793-2435.

Please forward copies of this report to Health Care Agency of Orange County; Alternative Technologies Section of Department of Health Services, Sacramento, California, seeking their assistance for sign off of the treated soil, with a time frame of 4 to 6 weeks.

Sincerely Yours,

Frank Visco

TABLE OF CONTENTS

I. HISTORY OF CONTAMINATED SOIL AT ORANGE COAST COLLEGE

The approximate 80 cubic yards of soil at Orange Coast College was thought to be contaminated with both diesel and waste oil that leaked from underground storage tanks. Upon removal of the tanks and the contaminated soil from its original site, the contaminated soil was placed in a vacant field at the corner of Adams Avenue and Pinecreek Drive at the Orange Coast College campus. The soil was spread on plastic sheeting to a thickness of about 1 foot. The soil was allowed to aerate for several months. During this period ALWS collected several samples at different time intervals for analysis by Babcock Labs to determine the levels of total peteroleum hydrocarbon (TPH) contamination. From March 1988 through October 1988 TPH values were determined and ranged from as low as 380 ppm to as high as 10,000 ppm (see Appendix A elsewhere in this report). It is clear that the contamination levels vary substantially. Variations are probably due to the fact that the soil has "hot" and "cold" spots. Hot spots have higher than average levels of contamination while cold spots have lower than average levels of contamination. Since diesel and oil are not known to evaporate readily, it is unlikely that aeration could have reduced the levels of contamination. Laboratory treatment studies on 50 pound samples of this contaminated soil over a period of several months indicated that the ALWS chemical fixation process using the polymer known as HCC-104 could reduce levels of TPH contamination to below 100 ppm for TPH_s. Based upon these studies and encouragement from Alternative Technology Section of the Department of Health Services of the State of California, Coast Community College District agreed to try the chemical fixation process on the contaminated soil discussed here.

II. DOCUMENTATION OF SOIL CONTAMINATION BY THE OCC

In February and March of 1988 Coast Community College District initiated the analysis of the soil surrounding the leaky tanks in question. Associated Labs in Orange, and NorCal Engineering of Los Alamitos were involved in these initial studies, at the direction of Pomona Valley Equipment Rentals, Inc., Chino, CA, who pulled out the tanks. Contamination levels appear to be variable, ranging as high as 38,000 parts per million (ppm or mg/kg) for Total Petroleum Hydrocarbons (TPH_s) as determined by EPA 418.1. The next page refers to the results from the Laboratory. (See Appendix B).

III. DOCUMENTATION OF LEVELS OF CONTAMINATION OF SOIL BY THE ALWS

From March 1988 through November 1988 ALWS collected samples of the suspected contaminated soil with the permission of Gene Harrie. The samples were primarily analyzed for total petroleum hydrocarbons (TPH_s) with a few samples analyzed for total nonvolatile petroleum hydrocarbons ($TNVPH_s$). TPH_s were determined by EPA 418.1 (modified) and $TNVPH_s$ were determined by carbon disulfide extraction (GC method). TPH values ranged from 250 to 10,000 parts per million, while $TNVPH_s$ ranged from 54 to 520 parts per million (Table I).

* Each soil sample represents a composite of several smaller subsamples. TPH_s analysis was performed according to EPA 418.1 protocol, as approved by the Department of Health Services, State of California. Appendix A contains the results from the Babcock Labs, including those for $TNVPH_s$.

IV. STUDIES ON THE CONTAMINATED SOIL AT OCC

In March 1988 ALWS began its lab studies to determine the effectiveness of the chemical fixation process on the contaminated soil in question. The majority of the studies consisted of treating anywhere from 25 to 90 pounds of the soil. Treatment consisted of creating a water/soil slurry and allowing the slurry to mix for 10 minutes. HCC-104 was then added to this slurry and the slurry/HCC-104 mixture was allowed to mix for anywhere from 30 minutes to 2 hours, depending on the specific experimental plan. The results summarized below are for both Total Petroleum Hydrocarbons and Nonvolatile Petroleum Hydrocarbons. All contamination levels were determined by Babcock Labs and hard copies of their analytical data are found in Appendix C.

TABLE II

Effect of chemical fixation treatment with HCC-104 on Total Petroleum Hydrocarbons (TPH_s, ppm) in the soil.

DATE TESTED (LAB STUDY)	SOIL CHECK/CONTROL (UNTREATED)	CHEMICALLY FIXED WITH HC-104 (TREATED)
03/23/88	5000	40
07/07/88	4400 (avg. of 4500 & 4300)	100
07/12/88	4950 (avg. of 3600 & 6300)	20 (retested on 07/29 10 ppm)
09/15/88	3800 (avg. of 3600 4000)	80 (avg. of 70 & 90)

TABLE III

Effect of chemical fixation treatment with HCC-104 on Total Nonvolatile Petroleum Hydrocarbons* ($TNVPH_s$, ppm) in soil.

	SOIL	
DATE TESTED (LAB STUDY)	CONTROL/CHECK (UNTREATED)	CHEMICALLY FIXED WITH HC-104 (TREATED)
09/15/88	365 (avg. of 210 & 520)	78 (avg. of 60 &90)

* Analyzed as per the method recommended by the Department of Health Services, State of California (carbon disulfide extraction followed by gas chromatography as outlined in LUFT manual).

V. PERMIT APPLICATION AND MANAGEMENT BROGRAM (PAMP)

The process of chemical fixation of petroleum hydrocarbons is a new process in the State of California as well as the U.S.A. Tricoast and ALWS worked closely with state, county, and local agencies to inform them of the technical aspects of the process. Dr. Gabbita of ALWS had several personal conversations with representatives of these agencies and accordingly he followed the direction of the Alternative Technology Section of the Health Services and filed the specific, necessary permits required by the various state, county and local designated agencies.

Subsequent investigation revealed that possibly as many as 8 agencies (at least) may be required to issue permits.

VI. DESCRIPTION OF CHEMICAL FIXATION PROCESS USING HCC-104

The process, proprietary in nature, is a chemical fixation-stabilization mechanism to lock up hydrocarbons (light as well as heavy) when found to be associated with a soil matrix.

The process is based on the use of polymer and polymer-additives which, when mixed with contaminated soil, render hydrocarbons immobilized and thus make hydrocarbons non-labile preventing possible transport to groundwater. The process requires optimal use of water which acts as a carrier to aid action of polymer and polymer-additives in pulling the hydrocarbons from soil particles or "fixing" them in place.

After treatment with the combination of polymer and polymer-additives, the soil (originally contaminated with the hydrocarbons) is ready to be put back into the same ground from where it was originally excavated.

It is also possible to mix cement with the slurry (soil treated with polymer and polymer-additives, together with water) and put it back in the ground so as to minimize possible future leak(s) of hydrocarbons from the container tank.

Chemical fixation is one of the most viable and versatile tools available to industry and has received considerable attention from many state agencies, as well as USEPA.

VII. TREATMENT OF THE SOIL AT THE OCC

Approximately 100 cubic yards of soil contaminated with petroleum hydrocarbons was treated on the Orange Coast College campus. The soil was thought to be contaminated by the leaky underground tanks containing diesel and waste oil. The soil was first removed from the OCC farm shop area in March of 1988 and later allowed to aerate on the corner of Adams Avenue and Pincreek Drive (on the OCC campus). In late October the soil was stockpiled. On Oct. 15, 31, and Nov. 1, 1988 the soil was treated by Tricoast Engineering using the ALWS polymer known as HCC-104. Treatment consisted of loading 8 cubic yards of soil (by conveyor belt) into a cement mixer. Enough water was added to the soil to create a homongenized soil/water slurry. This slurry was allowed to mix for a period of 15 minutes to dissolve larger clumps of soil. Next, 1 ton of HCC-104 (the polymer) was added to the slurry creating a soil/water/polymer slurry. This final slurry was mixed for at least 30 minutes. After mixing, the slurry was deposited on a plastic liner in a containment area. Samples of untreated soil and samples of each treated slurry were collected for analysis by Babcock Labs in Riverside, for total petroleum hydrocarbons. On the first 16 cubic yards of soil the nonvolatile petroleum hydrocarbons were also determined by use of carbon disulfide extraction (GC method). Results of these analyses are found in the following Tables (4 & 5) on the following two pages. In addition the hard copies of these analytical results are to be found in Appendix D.

VIII. RESULTS OF ACUTE AQUATIC TOXICITY BIOASSAY (TITLE 22, AQUATIC TOXICITY BIOASSAY TEST, *ATBT, DEPARTMENT OF HEALTH SERVICES, CALIFORNIA).

In September of 1988 a 40 pound sample of the soil in question was treated with the polymer used in the previously described field studies. The treated sample was analyzed by MBC Applied Environmental Sciences in Costa Mesa, for fish toxicity. This consisted of subjecting fish to various concentrations of treated soil for a period of 5 days and analysis of fish kills (if any) were monitored. Results of this test showed "the sample passed Title 22, Section 66696, Article 11 of the California Administrative Code (96 hour acute aquatic toxicity, following DOHS methodology) testing at least 750 mg/l with no mortality." In other words the treated soil sample passed the test because all of the fish in the test lived. The passage of this test serves as a manifest to delist the treated waste for landfilling in a regular, municipal (nonhazardous) landfill.

In Appendix E are the essentials of the toxicity test results. Copy of the MBC report is available from ALWS.

IX. EFFECT OF CHEMICAL FIXATION TREATMENT WITH HCC-104 ON SOIL CONDITION FOR PLANT GROWTH: EXPERIMENTS WITH RYE GRASS

On November 8, 1988 approximately 5 pounds of rye grass seeds were broadcast randomly by hand over approximately 1/3 of the treated soil. Within one week the seeds had sprouted. While this is only a subjective and qualitative test it does suggest that the treated soil can support the growth of rye grass. On the next page, photo 1 shows the soil shortly after the treatment but before the spreading of the seed, photo 2 shows the same treated soil 1 week after seeding, photo 3 shows the same area 1 month after seeding. The third photo suggests that the vegetation is continuing to flourish.

3

XI. CONCLUSIONS

Soil contamination occurred from petroleum hydrocarbons (diesel and waste oil) that leaked from underground tanks located in the "Farm Shop" area on the OCC campus. Documentation from independent lab sources indicated that soil contamination levels averaged 3655 parts per million for Total Petroleum Hydrocarbons as determined by EPA protocol 418.1 (modified). This contaminated soil was subjected to chemical fixation by mixing the soil with water and the ALWS product known as HCC-104. Following chemical fixation the parts per million dropped to 10 or less. In addition, fish toxicity testing indicated that soil treated by this chemical process was nontoxic to fish and therefore, may be safe for most landfilling.

Finally, the growth of rye grass continues to flourish at the time that this report is being prepared.

In conclusion, it appears that the chemical fixation process was successful in reducing the total petroleum hydrocarbons to levels under 100 parts per million.

Re: Chemical Analysis of Soils - Located at Orange Coast College, in the City of Costa Mesa, California

Dear Sirs:

Pursuant to your request, Total Hydrocarbons EPA Method 418.1 and EPA Method 8015 tests were performed on samples transported to this firm.

Samples which were in airtight containers, sealed and packed in ice were transported while chilled to Anaheim Test Laboratories, Inc. Tests as required were performed and results are attached.

We appreciate this opportunity to be of service to you. If you have any further questions, please do not hesitate to contact the undersigned.

Respectfully submitted,

Attention: Mr. Frank Visco

Dear Mr. Visco:

Enclosed are the results of the California Department of Health Services 96-Hour Acute Aquatic Toxicity Bioassay performed on the ALWS 1068 sample submitted on 16 September 1988. MBC utilized the latest California Department of Health Services procedures for testing the sample.

The ALWS treated sample submitted **PASSED** the 96-hour acute toxicity testing at all concentrations tested. Currently, Title 22, Section 66696, Article 11 of the California Administrative Code requires wastes to pass the 96-hour aquatic toxicity testing with greater than 50% survival at the 500 mg/ℓ concentration for compliance.

MBC Sample Number 8275 - Client Identification: ALWS 1068

PERCENT SURVIVORSHIP

250 mg/ℓ	100%
500 mg/ℓ	100%
750 mg/ℓ	100%

Utilizing the analytical data obtained from this test, the Department of Health Services can now evaluate the material for hazardous waste declassification. Should you have any questions regarding procedures or results of these tests, please contact me at your convenience.

Cordially,

MBC Applied Environmental Sciences

SUBJECT: SUBSURFACE INVESTIGATION FOR COAST COMMUNITY COLLEGE DISTRICT, ORANGE COAST COLLEGE FARM MAINTENANCE FACILITY, COSTA MESA, CALIFORNIA

Gentlemen:

Applied Geosciences Inc. is pleased to submit three copies of this report in general accordance with our contract dated 4 April 1989.

We have enjoyed working with you on this investigation, and look forward to future projects with you.

If you have any questions regarding this report, please call either of us.

Very truly yours,
APPLIED GEOSCIENCES INC.

SUBSURFACE INVESTIGATION AT
THE PREVIOUS LOCATION OF
THREE UNDERGROUND STORAGE TANKS
ORANGE COAST COLLEGE
FARM MAINTENANCE FACILITY
COSTA MESA, CALIFORNIA

1.0 INTRODUCTION

Presented herein are the findings of the subsurface investigation performed by Applied Geosciences Inc. at the Orange Coast College Farm Maintenance Facility, located at 2701 Fairview Road in Costa Mesa, California (Figure 1).

The subsurface investigation was performed in general accordance with the 4 April 1989 contract between Applied Geosciences Inc. and Coast Community College District. In addition, the investigation was conducted in general accordance with the proposal prepared by Applied Geosciences Inc. dated 28 March 1989 (Applied Geosciences Inc., 1989).

2.0 BACKGROUND

In December of 1987, the permitting process began for the removal of three underground storage tanks (USTs) from an area near the southeast corner of the Farm Maintenance Facility at Orange Coast College in Costa Mesa, California. The three respective USTs were reported to contain: 1) diesel fuel, 2) weed oil (primarily crude oil), and 3) waste oil (with solvents added).

Upon removal of the USTs, the Orange County Health Care Agency (OCHCA) carried out an investigation that included the excavation and sampling of in situ soils that were apparently degraded by petroleum hydrocarbons. After completion of the OCHCA investigation, the UST excavation was backfilled and capped with concrete.

In February 1989, Coast Community College District requested that Applied Geosciences Inc. propose a site investigation relative to the area where the USTs were previously removed. The proposed investigation was to include a project history review based on the existing OCHCA project records.

The information contained within this section of the subsurface investigation report was taken from copies of the project file records provided by the OCHCA Records Section (OCHCA, 1989), Santa Ana, California. Quotations contained herein indicate words, phrases or statements that have been taken verbatim from the original records.

18 December 1987

The following activities were reported to have occurred on this date:

1. A representative of Pomona Valley Equipment Rentals filed an "Application For Facility Modification" permit with the OCHCA for the removal of three USTs in the "Farm Area" (Farm Maintenance Facility) of Orange Coast College.

2. Attached to this application was a hand-drawn sketch (plan view) of the "Farm Area" which indicated the following:

   o The permit had been stamped "APPROVED" by the OCHCA Environmental Health, Waste Management Section (Plan #87-583); it was signed and dated 24 December 1987.

   o Three USTs were located near the southeast corner of the "Equipment Shed Canopy."

   o The USTs were shown to be side by side with the long axis of each tank oriented in an east-west direction.

Table 1 indicates how the tanks were labeled on the 18 December 1987 sketch.

TABLE 1

Tank A	1,000-gallon diesel fuel	(northernmost tank)
Tank B	250-gallon weed oil	(southernmost tank)
Tank C	250-gallon waste oil	(middle tank)

5 January 1988

The three USTs were removed by Pomona Valley Equipment Rentals, after which one soil sample was collected by an OCHCA representative. These activities were described by the OCHCA on a "Field Activity Description" form (which included a plan-view sketch) and on an "Underground Tank Cleanup Form," both of which were dated 5 January 1988.

A generalized subsurface cross section of the UST excavation, as well as soil sampling locations and chemical analyses results, are presented in Figures 3 and 4.

The following information is contained on these forms:

1. On the sketch, the tanks are located near the southeast corner of the "Equipment Shed"; they are side by side and oriented with the long axes in an east-west direction. The

tanks are labeled 1, 2 and 3 (from north to south), coinciding with Tanks A, C and B, respectively, of the previously discussed records (this information is found on the "Field Activity Description" form).

2. The tanks had been removed prior to the arrival of the OCHCA field representative (noted on both forms). It was noted on the "Field Activity Description" form that "Tank 3 contained weed oil which is apparently only crude oil; no pesticides, herbicides pr.". Also noted was that "Tank 2 waste oil & solvent tank: solvents were dump into tank..."

3. Soil Sample No. 1-C was collected approximately 1 foot below Tank 2 (assumed to be approximately 10 feet below ground surface [BGS]) in the center of the excavation, in a "black, discolored clay"; there was "evident discoloration to soil below center of excavation" (quotations taken from both forms).

4. The chain-of-custody record indicated that Sample No. 1-C was acquired on 5 January 1988 and was to be analyzed for total recoverable petroleum hydrocarbons (TRPH, by EPA Method No. 418.1) and for halogenated volatile organic compounds (HVOC, by EPA Method No. 8010).

5. Results of the analyses performed by Associated Laboratories of Orange, California, are shown in Table 2.

TABLE 2
(RESULTS IN MG/KG)

SOIL SAMPLE NO. 1-C	
TRPH (418.1): 30,000	HVOC (8010): ND

NOTES:

1. ND = Not detected; detection limit = 0.002
2. Mg/kg = Milligrams per kilogram

25 January 1988

An "Activities Report" form from the OCHCA read, in part:

> "3 tanks removed from fuel farm area: 1 tank contained waste oil - soil discolored around tank. Verbal results 418.1 30,000 ppm; 8010 ND."

1 February 1988

Mr. E.F. Harrie of Coast Community College District filed an "Underground Storage Tank Unauthorized Release (Leak)/ Contamination Site Report" form with the OCHCA. On that document, the "Farm School" was referenced as the location of a 250-gallon waste oil tank that was discovered to be leaking during its removal.

9 February 1988

A copy of an OCHCA chain-of-custody form dated 9 February 1988 was attached to a copy of laboratory results dated 17 February 1988. Associated Laboratories performed the chemical analyses for Pomona Valley Equipment Rentals. Both documents contained essentially the same information, as discussed below.

1. Two soil samples were collected at the "Fuel Farm" (assumed to mean the Farm Maintenance Facility) of Orange Coast College. They were labeled as sample "#2" and sample "#3"; neither the depths nor the locations from which the samples were collected were indicated on these records.

2. The samples were run for TRPH (EPA Method No. 418.1) and for benzene, toluene, ethylbenzene and total xylenes (BTEX, EPA Method No. 8020). Laboratory results for these two samples are given in Table 3 below.

3. Neither a site sketch nor the standard OCHCA forms describing field activities were included in the records provided by the OCHCA Records Section for this date.

TABLE 3
(RESULTS IN MG/KG)

Sample No.	TRPH (418.1)	B/T/E/X (8020)
#2	15,200	3.6/8.0/ND/61.5
#3	760	ND/ND/ND/ND

NOTES:

1) Detection limits for B/T/E/X: 0.05/0.05/0.1/0.1
2) ND = Not detected
3) Mg/kg = Milligrams per kilogram

17 March 1988

Excavation and sampling of degraded soils resumed in the area where the three USTs had previously been removed. The following activities were described by an OCHCA representative on standard OCHCA field forms that included a sketch (not to scale) illustrating the project area.

1. The sketch shows an excavation near the southeast corner of the "Workshop"; in it, three USTs are oriented as in previous records; the position of each UST is illustrated by dashed lines (found on the "Field Activity Description" form).

2. Soil sample "No. 5" was acquired with a backhoe in a "gray-green micaceous silty fine sand" (noted on the same form).

3. The approximate area from which the sample was collected (located on the sketch) is in the center of the excavation; the text portion of the field record describes Sample "No. 5" as having been "...taken from ~16 ft below grade at the approximate center of excavation (closer to north end of excavation)."

4. The "soil has a distinct diesel odor"; the reading on the gastech meter was "> 500 ppm"; the "sidewalls appear "clean"; mainly bottom of excavation appears contaminated," (quotations taken from the "Field Activity Description" form).

5. The records indicate that the soil sample was "...sent to Associated Labs and analyzed using EPA 8015/8020 for diesel contamination." However, no evidence of analytical results from samples collected on 17 March could be found in the file records provided by the OCHCA Records Section, (the quoted information was found on in the "Underground Tank Cleanup Form").

14 April 1988

Excavation and sampling of degraded soils again resumed in the area where the three USTs had been removed. The OCHCA records for work performed on this date include: 1) a description of field activities and a sketch (not to scale) of the project area, 2) a blank form that is used to document UST removal, 3) a chain-of-custody record, and 4) results of chemical analyses from Associated Laboratories. The following information was obtained from these records (quotations are taken from the "Field Activity Description" form, unless otherwise noted).

1. An excavation is located (on the sketch) next to the southeast corner of the "Maintenance Shop"; the perimeter of the digging is labeled as "15'" in a north-south direction

by "approximately 13'" in an east-west direction. The written field records indicate that it was "Excavated to approximately 25' depth."

2. Records also indicate that there was a "Slight odor of solvent in air above pit." Readings on the gastech meter were "0 to very low."

3. The sketch apparently shows soil sample "#1" to be located in the extreme south-central portion of the excavation at a depth of "25'." A gastech meter reading of "20 ppm" is apparently indicated for soil taken from this depth.

   Sample "#2" is shown to be located in the extreme north-central part of the excavation, also at a depth of "25'." A gastech reading from this soil is shown to be "0 ppm."

4. The chain-of-custody record indicates that the samples were to be analyzed as follows: "Analyze for waste oil, gasoline and diesel. If the TPH > 100 ppm, run EPA 8010."

5. Results of laboratory analyses for the two soil samples are summarized in Table 4.

TABLE 4
(RESULTS IN MG/KG)

Sample No.	TRPH (418.1)	TPH (8015)	B/T/E/X (8020)	HVOC (8010)
#1	4310	882	ND	ND
#2	ND	ND	ND	NA

NOTES:

1) ND = Not detected
2) NA = Not analyzed by this method
3) Detection limits:
   TRPH 10
   TPH 10
   B/T/E/X ... 0.05/0.05/0.1/0.1
   HVOC 0.01
4) Mg/kg = Milligrams per kilogram

<u>25 October 1988 To 25 April 1989</u>

The ensuing information was derived from the OCHCA "Activities Report" (communication logs) for this project. Words and phrases appearing within quotation marks have been taken verbatim from the records.

10/25/88 Based upon current information and laboratory results, the site assessment was decided to be incomplete.

10/25/88 The excavation where the three USTs were previously removed was overexcavated, backfilled with "clean fill" and "cemented over."

12/22/88 The project history of soil sampling and laboratory results was reviewed in an attempt to clarify what may remain beyond existing limits of the excavation.

01/04/89 Based upon the "last report received 10-13-88 ... we still need to know extent (of) contam."

04/25/89 Representatives of Applied Geosciences Inc. became actively involved in the project.

3.0 OBJECTIVE

The objective of the subsurface investigation conducted by Applied Geosciences Inc. was to assess the vertical extent and concentration of petroleum hydrocarbons and aromatic VOCs in the soil in the reported area where three USTs were previously removed.

4.0 SCOPE OF INVESTIGATION

The scope of the subsurface investigation included the following:

Task 1. Preparation and implementation of a health and safety plan.

Task 2. Review of OCHCA file records with regards to previous soil sampling locations and results of laboratory analyses.

Task 3. Removal of a 12-inch diameter, 6-inch thick concrete core; the drilling of one soil boring to a depth of approximately 33 feet BGS; collection of three soil samples; backfill and surface patch of the boring.

Task 4. Laboratory chemical analyses of all of the soil samples for TRPH in general accordance with EPA Method No. 418.1 and for BTXE in general accordance with EPA Method No. 8020; analysis of one of the soil samples for total petroleum hydrocarbons (TPH) in general accordance with EPA Method No. 8015 (modified).

Task 5. Data evaluation and preparation of this report.

5.0 FIELD INVESTIGATION

5.1 Soil Boring Location and Installation

5.1.1 Boring Location

The location of the recently drilled soil boring was based on information provided by the OCHCA Records Section. The OCHCA field records dated 14 April 1988 were judged to be particularly useful in assessing the approximate location of the most recent and deepest excavation-bottom-sample impacted with petroleum hydrocarbons. The "Activities Report" of 25 January 1988 and the UST leak document of 1 February 1988, discussed in Section 2.0, were also used as guidelines for boring placement prior to the actual field work.

As was noted in the 14 April 1988 information discussed in Section 2.0, the UST excavation was reported to have reached a maximum depth of 25 feet BGS on that date. It was also reported that soil sample "#1" was collected at this depth in the south-central portion of the excavation. Of the two soil samples collected on that date, sample "#1" had the highest reported concentration of petroleum hydrocarbons.

Based on this and other information provided in the records, the location of the recently drilled soil boring was selected to be positioned vertically over the approximate vicinity where soil sample "#1" was collected on 14 April 1988. The location of the boring, designated as OCC1, is presented in Figure 2.

5.1.2 Boring Installation

On 22 June 1989, an attempt was made to drill one soil boring to approximately 25 to 30 feet BGS with a trailer-mounted drilling rig equipped with an approximate 8-inch outside diameter (OD) hollow stem auger.

A total depth of approximately 22 feet BGS was reached on that day before the drilling rig malfunctioned and had to be removed from the project site. The boring was temporarily covered and the area enclosed with barricades and caution tape.

On 28 June 1989, the drilling of boring OCC1 was completed with a truck-mounted drilling rig equipped with approximately 8- and 11-inch OD hollow stem auger. The boring was drilled to a total depth of approximately 33 feet BGS.

Relatively undisturbed soil samples were obtained in the boring at 20 feet BGS on the first day of drilling activities, and at 25 and 31.5 feet BGS on the second day with a 2-inch inside diameter (ID) split-barrel sampler. Furthermore, a standard penetrometer (SPT) sampler was used to obtain relatively undisturbed soil (from approximately 1.5- to 2-foot intervals) between the collected samples mentioned above.

The SPT samples provided additional lithologic characteristics of soil between those samples collected for analysis. A generalized subsurface cross section of the UST excavation, as well as soil sampling locations and associated chemical analyses results, are depicted in Figures 3 and 4.

Results of chemical analyses of selected soil samples are also presented in Table 5 of Section 7.0. In addition, a headspace analysis for volatile aromatics was conducted during drilling operations on soil from each sampler. No detectable headspace readings were measured in any of the samples. Procedures for the collection of soil samples and headspace analysis are discussed in more detail in Appendix A.

Upon the completion of drilling and soil sampling of boring OCC1, the boring was backfilled in the following manner: 1) from 33 to approximately 10.5 feet BGS with activated bentonite chips, 2) from 10.5 to approximately 2 feet BGS with a mixture of #3 sand and bentonite chips at a 3:1 ratio, 3) from 2 to approximately 0.5 feet BGS with activated bentonite chips and 4) from 0.5 feet to the surface with the previously removed concrete core; asphaltic concrete (cold patch) was placed in the sawcut between the concrete core and the remainder of the concrete pad.

5.2 Soil Observations

Notes taken on the soil types encountered in the soil boring have been incorporated into the soil description presented in Section 6.1. In addition, olfactory observations were made in the field regarding the presence of petroleum hydrocarbons in the auger cuttings (soil brought to the surface during drilling). No olfactory evidence of hydrocarbon odors was noted.

6.0 SUBSURFACE CONDITIONS

6.1 Soil Lithology

Predominant soil types encountered in the soil boring (as interpreted during drilling operations), include gravels, sands, silts and clays. These soil types were observed to be distributed as described below.

In general, a sandy gravel was encountered in the soil cuttings from approximately the upper 16 feet of the boring. This unit is interpreted to be artificial fill material used to backfill the UST excavation. Beneath the artificial fill, a fine sandy clay containing some gravel was encountered in the cuttings to a depth of approximately 20 feet BGS. This soil interval is construed to be a zone of mixing where the bottom of the digging was overexcavated, prior to placement of the fill (documented on the OCHCA "Activities Report" dated 25 October 1988). Below this sandy clay (at 20 feet BGS), a relatively impermeable clay unit was encountered in the samples to approximately 22 feet BGS. This clay unit appeared to be undisturbed native soil, in our judgment.

Beneath the clay unit, a series of fine to coarse sands with occasional interbeds of silty fine sand was encountered between approximately 22 and 33 feet BGS. A more detailed description of the soils encountered during this investigation is presented on the soil boring log in Appendix B.

6.2 Groundwater Occurrence

The shallow groundwater table was not encountered during the course of this subsurface investigation. Furthermore, the amount of moisture observed in the soil units encountered during drilling operations, described on boring log OCC1, was "dry to damp."

In addition, the OCHCA project records for 14 April 1988 indicate that groundwater was not observed during the excavation and sampling of subsurface soils on that day.

7.0 CHEMICAL ANALYSES RESULTS

Vadose zone soil samples collected as described in Section 5.1.2 were analyzed by Truesdail Laboratories Inc., a California state-certified hazardous waste laboratory located in Tustin, California.

A total of three soil samples were collected during the subsurface drilling program. The three samples were analyzed for TRPH in general accordance with EPA Method No. 418.1 and for BTXE in general accordance with EPA Method No. 8020. One of the three soil samples was analyzed for TPH in general accordance with EPA Method No. 8015 (modified).

One of the samples analyzed for TRPH was found to contain 3.2 mg/kg by EPA Method 418.1. Otherwise, laboratory results for all of the samples analyzed by the three EPA methods discussed above (where applicable) contained non-detectable quantities of the respective components analyzed for, at the detection limits noted. Laboratory results of chemical analyses are summarized in Table 5. The laboratory report is presented in Appendix C.

TABLE 5
(RESULTS IN MG/KG)

Sample No.	TRPH (418.1)	TPH (8015)	B/T/X/E (8020)

OCC1-2	ND	ND	ND
OCC1-3	3.2	NA	ND

NOTES TO TABLE 5:

1) ND = Not detected
2) NA = Not analyzed by this method
3) Detection limits:
   TRPH 1.61
   TPH 10.0
   B/T/X/E ... 0.005/0.005/0.005/0.005
4) Mg/kg = Milligrams per kilogram

8.0 DISCUSSION

Three USTs were removed from an area near the southeast corner of the Farm Maintenance Facility at Orange Coast College in Costa Mesa, California. The OCHCA performed an investigation which included the excavation and sampling of soils that were apparently degraded by petroleum hydrocarbons. Information pertaining to this investigation was provided to Applied Geosciences Inc. by the OCHCA records section (OCHCA, 1989). These records were observed to be incomplete regarding: 1) field activity descriptions, 2) measurements for locating the USTs with respect to existing site features and 3) results of laboratory analyses.

Applied Geosciences Inc. carried out a subsurface investigation in June 1989 based on information contained in the OCHCA records (OCHCA, 1989) and on visits to the site by field personnel. There were primarily two factors used to determine the location of soil boring OCC1 for the investigation.

One factor used to select the location of soil boring OCC1 was the observed presence of a relatively "new" concrete slab in the area where the USTs were previously removed. The "new" concrete slab apparently indicated the approximate location of the UST excavation. The slab measured approximately 23 feet in a north-south direction by 19 feet in an east-west direction. A sketch from the OCHCA records showed the UST excavation to be approximately 15 feet (north-south) by 13 feet (east-west). With no source of information to indicate otherwise, the lateral limits of the UST excavation were assumed to be centrally located within the perimeter of the "new" slab (Figure 2).

A second factor used to determine the location of the soil boring was based on information contained in the OCHCA records (OCHCA, 1989). That information is more fully discussed in Item 5.1.1 of Section 5.0 of this report. To summarize that section, the records indicated that the approximate location of the most recent and deepest excavation-bottom-sample impacted with petroleum hydrocarbons was collected from the south-central portion of the UST excavation. The OCHCA records did not contain information regarding the actual (measured) locations of soil samples relative to existing site features near the UST excavation.

Based on the two factors discussed above and our professional judgment, there is a high likelihood that the soil boring was positioned vertically over the approximate location in the UST excavation where previous soil sampling indicated the presence of soils that were degraded by petroleum hydrocarbons.

Results of chemical analyses for soil samples collected by the OCHCA on 14 April 1988 indicated that soils degraded by petroleum hydrocarbons (TRPH by EPA Method No. 418.1 and TPH by EPA Method No. 8015 [modified]) existed in the south-central portion of the UST excavation at a depth of 25 feet BGS. However, laboratory results for soil samples collected from approximately the same area by Applied Geosciences Inc. on 22 June and 28 June 1989 indicated that no significant concentrations of these petroleum hydrocarbons existed in the samples analyzed, to a depth of approximately 33 feet BGS.

At this time, it is not clear how much of the existing soil in the area of the UST excavation is degraded by petroleum hydrocarbons, nor is it clear to what degree the soil is degraded. Applied Geosciences Inc. recommends in Section 10.0 of this report that further assessment of this area be carried out with the use of drilling and soil sampling equipment and a mobile laboratory.

If results of chemical analyses for selected soil samples indicate that neither petroleum hydrocarbons nor aromatic VOCs are present in significant amounts in future soil borings (and upon consent of the OCHCA), Applied Geosciences Inc. would be of the opinion that further subsurface assessment in this particular area would not be necessary.

9.0 CONCLUSIONS

The following conclusions are based on data obtained during the subsurface investigation, current regulatory guidelines, a review of the OCHCA project records and our professional judgment:

- No significant concentrations of total recoverable petroleum hydrocarbons (TRPH, in general accordance with EPA Method No. 418.1), total petroleum hydrocarbons (TPH, in general accordance with EPA Method No. 8015 [modified]) or benzene, toluene, total xylenes or ethylbenzene (BTXE, in general accordance with EPA Method No. 8020) were detected in the soil samples collected and analyzed during the Applied Geosciences Inc. subsurface investigation.

- Previous investigative work by the OCHCA indicated that concentrations of TRPH and TPH exceeded 4300 mg/kg and 800 mg/kg, respectively. At this time, it is not clear how much of the existing soil in the area of the UST excavation is degraded by petroleum hydrocarbons, nor is it clear to what degree the soil is degraded.

- Groundwater was not encountered during the course of either the OCHCA investigation or the Applied Geosciences Inc. subsurface investigation.

10.0 RECOMMENDATIONS

The recommendations presented in this section are based on data obtained during the subsurface investigation, current regulatory guidelines, a review of the OCHCA project records and our professional judgment:

- Use a bucket-auger drilling rig to further assess the extent of soils degraded by petroleum hydrocarbons in the area of the UST excavation; and

- Collect and analyze soil samples for total recoverable petroleum hydrocarbons (TRPH, in general accordance with EPA Method No. 418.1), total petroleum hydrocarbons (TPH, in general accordance with EPA Method No. 8015 [modified]) and benzene, toluene, total xylenes and ethylbenzene (BTXE, in general accordance with EPA Method No. 8020) using an on-site mobile laboratory.

APPENDIX A

SOIL SAMPLING AND HEADSPACE ANALYSIS PROCEDURES

APPENDIX A

SOIL SAMPLING AND HEADSPACE ANALYSIS PROCEDURES

A.1 Soil Sampling Procedures

1. Drilling was conducted using a drilling rig equipped with 7-inch, 8-inch and 11-inch outside diameter hollow stem augers. All augers were steam cleaned prior to use.

2. Soil samples were collected with a split barrel sampler lined with pre-washed brass and/or stainless steel tubes. Each sampler was driven approximately 18 inches with a 140-pound hammer dropping approximately 30 inches per blow. The number of blows required to drive the sampler each six inches was then recorded.

3. Either the lowermost or second lowermost tube from each sampler was removed from the sampler and capped on each end with heavy-duty aluminum foil and polyethylene end caps. Edges of the end caps were secured with electrical tape.

4. Samples were labeled with boring number, date and project number, and then placed in a plastic Ziploc bag.

5. Samples were stored in an ice chest cooled with ice to approximately 40 degrees Fahrenheit prior to transportation to a California Department of Health Services state-certified hazardous waste laboratory under chain-of-custody procedures.

6. Sampling equipment was washed between samples with a solution of water and trisodium phosphate, rinsed twice with tap water and finally rinsed with deionized water.

A.2 Headspace Analytical Procedures

1. Soil at each sampled interval was extracted from the shoe of the sampler for headspace analysis and placed in a plastic Ziploc bag. The bag was filled with approximately 50 grams of soil and closed.

2. After agitating the soil sample and then allowing it to sit for approximately three to four minutes, the probe of a portable organic vapor meter (OVM) was inserted through an opening in the bag and a reading was taken in the headspace.

3. The OVM used was an Hnu Systems, Inc. Model PI 101 photoionizer equipped with a 10.2 eV probe calibrated to 58 ppm_v benzene.

4. The detection range reported by the manufacturer is 0.1 ppm_v to 2,000 ppm_v for benzene, and is similar for other volatile organic (hydrocarbon) compounds.

Attention: Mr. Eugene Harrie

SUBJECT: FOLLOW-UP PHASE II SOIL INVESTIGATION IN THE VICINITY OF REMOVED UNDERGROUND STORAGE TANKS FARM MAINTENANCE FACILITY, ORANGE COAST COLLEGE, COSTA MESA, CALIFORNIA

Dear Mr. Harrie:

Applied Geosciences Inc. is pleased to submit two copies of this referenced report in general accordance with our signed contract of 27 November 1989 between Coast Community College District and Applied Geosciences Inc. Based on the results we recommend that the Orange County Health Care Agency be requested to issue a closure permit for the former underground storage tanks discussed in the report.

We appreciate the opportunity to work with you; if you have any questions regarding this report, please contact us at your convenience.

Very truly yours,
APPLIED GEOSCIENCES INC.

TABLE OF CONTENTS

FOLLOW-UP PHASE II SOIL INVESTIGATION IN THE VICINITY OF REMOVED UNDERGROUND STORAGE TANKS FARM MAINTENANCE FACILITY ORANGE COAST COLLEGE COSTA MESA, CALIFORNIA

1.0 INTRODUCTION

Presented herein are the findings of the Phase II soil investigation performed by Applied Geosciences Inc. at the Orange Coast College Farm Maintenance Facility, located at 2701 Fairview Road in Costa Mesa, California (Figure 1).

The work was performed for the Coast Community College District by Applied Geosciences Inc., in general accordance with Attachment 2 of the contract dated 4 April 1989.

The scope of the Phase II soil investigation was based on the recommendations presented in the previous subsurface investigation report dated 15 August 1989 (Applied Geosciences Inc., 1989) and discussions with Lisa Prouty of the Orange County Health Care Agency (OCHCA).

2.0 BACKGROUND

In January 1988, three underground storage tanks (USTs) reported to contain diesel fuel, weed oil, and waste oil were excavated and removed from the site. Following the removal of the USTs, several iterations of excavation and soil sampling were conducted in the former tank excavation area prior to its being backfilled. A summary of these activities, as interpreted from the OCHCA records, is presented in Applied Geosciences Inc. (1989).

In June 1989 Applied Geosciences Inc. performed a subsurface investigation in the area of the three USTs which were removed in January 1988 (Applied Geosciences Inc., 1989). The subsurface investigation included the drilling of one soil boring (OCC1) to an approximate depth of 33 feet below ground surface (BGS). Three soil samples were analyzed for total recoverable petroleum hydrocarbons (TRPH), in general accordance with Environmental Protection Agency (EPA) Method No. 418.1; total petroleum hydrocarbons (TPH), in general accordance with EPA Method No. 8015 (modified); and benzene, toluene, total xylenes, and ethylbenzene, in general accordance with EPA Method No. 8020. Although no significant levels of TPRH, TPH, or BTXE were found, additional soil borings were recommended by Applied Geosciences Inc. (with the concurrence of OCHCA) to increase the level of confidence in the results of the initial subsurface investigation.

3.0 OBJECTIVE

The objective of the follow-up Phase II soil investigation was to further assess the potential presence and concentration of petroleum hydrocarbons and aromatic volatile organics north and south of the previously drilled OCC1 soil boring (Figure 2).

4.0 SCOPE OF WORK

The scope of work conducted included the following:

Task 1. Modification and implementation of an existing Health and Safety Plan;

Task 2. Cutting out concrete; drilling two soil borings to approximately 36 feet BGS (one slant boring and one straight boring); collecting soil samples; backfilling the borings; and patching the surface with concrete;

Task 3. Laboratory chemical analyses of nine soil samples for TRPH in general accordance with EPA Method No. 418.1, five soil samples for TPH in general accordance with EPA Method No. 8015 (modified), and four soil samples for aromatic volatile organics in general accordance with EPA Method No. 8020; and

Task 4. Project management, data analysis, and report preparation.

The chemical analysis program was modified slightly from the original scope due to site conditions. See Section 7.0 for an explanation.

5.0 SITE SETTING

The area of investigation is located in the area adjacent to the Farm Maintenance Facility at the Orange Coast College campus in the city of Costa Mesa in Orange County, California (Figure 2). The topography of the area is relatively flat with natural surface drainage to the northeast. The area of investigation is in the general vicinity of the previously removed USTs. A concrete slab, approximately six inches thick, covers the area of the former tank locations. Two buildings used for the storage and maintenance of equipment are located east and west of the concrete slab respectively. Immediately adjacent to the south side of the area of investigation is an area with large trees and shrubbery; it is relatively inaccessible to drilling equipment.

6.0 FIELD INVESTIGATION

6.1 Summary of Drilling Procedures

The field investigation was conducted on 30 January 1990. Two soil borings, one slant and one vertical, were drilled at the site to approximately 36 feet BGS (Figure 2). Boring OCC2, located south of the previously drilled boring OCC1 (Applied Geosciences Inc., 1989), was drilled at an approximate 20-degree angle from the vertical toward the south and was sampled at approximately 5-foot linear intervals along the slant of the boring. Vertical boring OCC3, located north of the previously drilled boring OCC1 (Applied Geosciences Inc., 1989), was sampled at approximately 5-foot depth intervals beginning at approximately 15 feet BGS. The soil sampling procedures are presented in Appendix A. Logs of the borings are presented in Appendix B. Borings OCC2 and OCC3 were backfilled with medium-sized bentonite chips installed through the hollow stem augers. The bentonite chips were then activated with water. Due to the instability of the borehole wall of the slant boring OCC2, only the approximate upper one-third of the boring could be backfilled with bentonite chips. The shallow groundwater table was not encountered during the course of this subsurface investigation.

Visual and olfactory observations were made in the field regarding the presence of petroleum hydrocarbons in the auger cuttings. Headspace readings of the volatile organic compounds (VOCs) were measured using an organic vapor meter (OVM) photo ionization detector (PID) and recorded on the boring logs (Appendix B). The headspace analytical procedures are explained in Appendix A.

6.2 Soil Lithology

The predominant soil types encountered in the soil borings (interpreted during the drilling operations) include silty clay, sandy gravel, and sand. These soil types were observed to be distributed as described below. A generalized cross-section is presented in Figure 3.

In general, sandy gravel with varying amounts of silt and clay was noted in the approximate upper 20 feet BGS in borings OCC1 (Applied Geosciences Inc., 1989) and OCC3. This material is interpreted to be artificial fill used to backfill the UST excavation. In slant boring OCC2, the artificial fill is interpreted to have been encountered in the upper 1.5 feet.

Below the interpreted artificial fill material, a silty clay unit, interpreted as native soil, was encountered to an approximate depth of 24.4 feet BGS (vertical depth) in slant boring OCC2. However, this silty clay unit was not observed in borings OCC1 and OCC3. In boring OCC1, a lens of clay that appeared to be relatively impermeable, approximately 2 feet thick, was encountered below the interpreted artificial fill material at approximately 20 feet BGS (Applied Geosciences Inc., 1989). In boring OCC3, sands were observed below the interpreted artificial fill material.

A series of fine to coarse sands with interbeds of fine silty sand was encountered from 22 feet (borings OCC1 and OCC3) and 24.4 feet (boring OCC2) to the bottom of the three borings. A more detailed description of the soils encountered during this investigation is presented in the soil boring logs in Appendix B.

7.0 CHEMICAL ANALYTICAL RESULTS

The soil samples were analyzed by West Coast Analytical Service, Inc., a state of California certified, hazardous waste laboratory located in Santa Fe Springs, California.

Soil sample selection was based on site conditions and field observations. Thus, nine samples were analyzed for TRPH in general accordance with EPA Method No. 418.1; five samples were analyzed for TPH, in general accordance with EPA Method No. 8015 (modified); and four samples were analyzed for benzene, toluene, total xylenes, and ethylbenzene (BTXE) in general accordance with EPA Method No. 8020.

With the exception of two samples, all the analyzed soil samples contained no detectable TRPH (EPA Method No. 418.1) above the 10 milligrams per kilogram (mg/kg) detection limit. Sample OCC3-1, collected from an approximate depth of 15 feet BGS in boring OCC3, and sample OCC3-2, collected from an approximate depth of 20 feet BGS in boring OCC3 were both reported to contain 43 mg/kg of TRPH.

In addition, none of the analyzed soil samples contained detectable TPH (EPA Method No. 8015 [modified]) above the 5 mg/kg detection limit, or BTXE (EPA Method No. 8020) above the 1 microgram per kilogram detection limit. The soil sample analytical results are summarized in Table 1 and presented in Figure 3, the generalized cross section. The laboratory reports on the chemical analyses of the soil samples are presented in Appendix C.

8.0 DISCUSSION

Based on the data obtained, it is the judgment of Applied Geosciences Inc. that there is a low likelihood that petroleum hydrocarbons are present in the area investigated. The data on which this judgment is based included the fact that no significant petroleum hydrocarbon indicators were detected during the drilling of the borings, no TPH or BTXE were detected in the analyzed soil samples, and TRPH concentrations were low (<50 ppm) or were not detected.

9.0 CONCLUSIONS

The following conclusions are based on data obtained during the subsurface investigation, current regulatory guidelines, results of the previous investigation (Applied Geosciences Inc., 1989), and our professional judgment:

- o No indications of petroleum hydrocarbon impacted soil were noted, with exception of a slight petroleum hydrocarbon odor in one sample.
- o No detectable concentrations of TPH (EPA Method No. 8015 [modified]), or BTXE (EPA Method No. 8020) were detected in any of the soil samples analyzed.
- o The maximum reported TRPH (EPA Method No. 418.1) in the analyzed soil samples was 43 mg/kg of TRPH.
- o There is a low likelihood that the elevated concentrations of petroleum hydrocarbons are present in the area of the former underground storage tanks.

10.0 RECOMMENDATION

The following recommendation is based on data obtained during the subsurface investigation, current regulatory guidelines, results of the previous investigation (Applied Geosciences Inc., 1989), and our professional judgment:

- o Request the Orange County Health Care Agency to issue a closure permit for the investigated tanks.

11.0 REFERENCE

Property Background Information Questionnaire

Environmental Site Assessment
Property Background Information Questionnaire for Property Owner, Occupant, or Representative

PLEASE GIVE FURTHER DETAILS FOR ALL "YES" ANSWERS.

1. Describe the current uses of the Property. How long has the property been used for these purposes, and how long have you occupied the Property?
   Current use is for education, for about 62 years.

2. Describe the past uses, owners, and operators of the Property.
   Santa Ana Air Base training facility
   No flights training

3. Have the Property or adjoining properties been used for industrial activities including the following? (Please note that an adjoining property is a property that is next to your Property, even if it is across the street).

Gasoline Station	☐ Yes	☒ No	
Printing Facility	☒ Yes	☐ No	for graphics
Metal Plating Manufacturing	☐ Yes	☒ No	
Landfill	☐ Yes	☒ No	
Motor Repair Facility	☐ Yes	☒ No	
Dry Cleaners	☐ Yes	☒ No	
Junkyard	☐ Yes	☒ No	
Waste Treatment	☐ Yes	☒ No	
Storage, Disposal, or Recycling Facility	☒ Yes	☐ No	

Describe other industrial activities, if any.
Campus has an aircraft repair program.
There is an above ground aviation fuel tank.
The UST removed about 10 years ago, no releases known.

4. Have any hazardous substances, petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or other waste materials been dumped above ground, buried, or burned on the Property? ☐ Yes ☒ No

   If yes, please describe.

Environmental Site Assessment
Property Background Information Questionnaire for Property Owner, Occupant, or Representative

5. Have any of the following items been stored on the Property in containers greater than 5 gallons?

   Paint ☐ Yes ☒ No
   Chemicals ☐ Yes ☒ No
   Pesticides ☐ Yes ☒ No

6. Have hazardous substances or petroleum products been stored on the Property or transferred across the Property in pipelines, either above or below ground?

   ☒ Yes ☐ No ☐ Unknown gasoline & diesel pumps for underground [illegible] used for campus vehicles and equipment.

7. Have 55-gallon drums or sacks of chemicals been stored on the Property?

   ☐ Yes ☒ No ☐ Unknown

8. Has fill dirt been brought onto the property from an offsite source?

   ☒ Yes ☐ No ☐ Unknown for construction

9. Is there evidence that the fill dirt in Question 8 may be contaminated?

   ☐ Yes ☒ No ☐ Unknown

10. Are there currently any pits, ponds, or lagoons on the Property?

    ☐ Yes ☒ No ☐ Unknown

11. Have any pits, ponds, or lagoons previously existed on the Property?

    ☒ Yes ☐ No ☐ Unknown irrigation ponds

12. Are there currently areas on the Property with stained soil?

    ☐ Yes ☒ No ☐ Unknown

13. Have stained soils previously existed on the property?

    ☐ Yes ☒ No ☐ Unknown

14. Do underground or above-ground storage tanks exist, or have they existed previously on the Property?

    ☒ Yes ☐ No ☐ Unknown

15. Do fill pipes, vent pipes, or access ways indicating the presence of underground storage tanks exist on the Property?

    ☐ Yes ☒ No ☐ Unknown

16. Have fill pipes or vent pipes which may indicate the presence of an underground storage tank been removed from the Property?

    ☐ Yes ☒ No ☐ Unknown

17. Are floor drains stained with anything other than water in any area on the Property?

    ☐ Yes ☒ No ☐ Unknown

18. Do floor drains on the Property emit foul odors?

    ☐ Yes ☒ No ☐ Unknown ~~Sometimes~~ at times maybe from mop water

19. Is the Property served by private well or non-public water source?

    ☐ Yes ☒ No ☐ Unknown

20. Are contaminants known to exist in any private well or non-public water system serving the Property?

    ☐ Yes ☒ No ☐ Unknown

21. Does the Property discharge wastewater, other than domestic wastewater or storm water, into the sewer?

    ☐ Yes ☒ No ☐ Unknown

22. Other than permission for domestic hookup, have any city, county, or local permits for wastewater discharge been issued to the Property?

    ☐ Yes ☐ No ☒ Unknown He knows the owners pays a fee to the Orange County Sanitation District

23. Does a septic tank exist, or has one existed previously at the Property?

☐ Yes ☒ No ☐ Unknown

24. Do cesspools or cisterns currently exist on the Property?

☐ Yes ☒ No ☐ Unknown

25. Have cesspools or cisterns previously existed on the Property?

☐ Yes ☒ No ☐ Unknown

26. Other than storm water, does the Property discharge waste water onto the neighboring Property?

☐ Yes ☒ No ☐ Unknown

27. Is there a transformer or capacitor that may contain PCBs on the Property?

☒ ~~Yes~~ ☒ No ☐ Unknown

28. Is there any hydraulic equipment such as automobile lifts or elevators on the property?

☒ Yes ☒ No ☐ Unknown

29. Are PCBs contained in hydraulic oil associated with hydraulic equipment located on the Property?

☐ Yes ☒ No ☐ Unknown

30. Has an asbestos and/or lead based paint survey been conducted at the Property?

☒ Yes ☐ No ☐ Unknown

31. Have pesticides, herbicides, or insecticides been applied on the Property?

☒ Yes ☐ No ☐ Unknown

32. Are you aware of any environmental liens against the Property that are filed or recorded under federal, tribal, state, or local law?

☐ Yes ☒ No ☐ Unknown

Environmental Site Assessment
Property Background Information Questionnaire for Property Owner, Occupant, or Representative

33. Have any environmental violations or citations associated with activities conducted on the Property been issued?

☐ Yes ☒ No ☐ Unknown

34. Has the property been included in other environmental assessments?

☐ Yes ☐ No ☒ Unknown

35. Have other environmental assessments identified hazardous substances or petroleum products that exist, or may have existed on the Property?

☐ Yes ☐ No ☒ Unknown

36. Are there any pending law suits that involve the release or threatened release of hazardous substances associated with the Property?

☐ Yes ☒ No ☐ Unknown

37. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the Property and/or have been filed or recorded in a registry under federal, tribal, state or local law?

☐ Yes ☐ No ☒ Unknown

38. Are you aware of any commonly known or reasonably ascertainable information about the Property that would help the environmental professional to identify conditions indicative of releases or threatened releases?

☐ Yes ☐ No ☒ Unknown

39. Do you have any specialized knowledge or experience related to the Property or near-by properties, including the knowledge of the chemicals and processes used by this type of business?

☐ Yes ☒ No ☐ Unknown

40. Based in your knowledge or experience related to the Property, are there any obvious indicators that point to the presence or likely presence of contamination?

Not to my knowledge.

TRAFFIC IMPACT ANALYSIS REPORT

ORANGE COAST COLLEGE VISION 2020 FACILITIES MASTER PLAN

Costa Mesa, California
June 30, 2015

1.0 INTRODUCTION

This Traffic Impact Analysis report addresses the potential traffic impacts associated with the proposed Orange Coast College Vision 2020 Facilities Master Plan (hereinafter referred to as Project). The approximately 160-acre project site is generally located west of Fairview Road between Adams Avenue and Merrimac Way in the City of Costa Mesa, California. The proposed Project will generally consist of the construction of new campus facilities and the renovation of existing campus facilities to meet the District's instructional needs and to accommodate growth in the student body over the planning horizon and beyond for in-district students and out-of-district students. In addition to the new and/or renovated instructional space, the proposed Project will also consist of the construction of on-campus student housing, the construction of a mixed-use development consisting of conference/education office space, retail and/or food uses, an expansion/renovation to the existing recycling center located on the north end of the campus and the construction of a new parking structure to be located on a portion of the Adams parking lot.

1.1 Scope of Work

This traffic report documents the findings and recommendations of a traffic impact analysis conducted by Linscott, Law & Greenspan, Engineers (LLG) to determine the potential impacts associated with the proposed Project. The traffic analysis evaluates the operating conditions at thirty five (35) key study locations within the project vicinity (including one proposed project driveway to be added along Adams Avenue), estimates the trip generation potential of the proposed Project, superimposes the project-related traffic volumes on the circulation system as it currently exists and forecasts future operating conditions without and with the proposed Project. Where necessary, intersection improvements/mitigation measures are identified.

The project site has been visited and an inventory of adjacent area roadways and intersections was performed. Existing peak hour traffic information has been collected at thirty four (34) key study locations on a "typical" weekday for use in the preparation of intersection level of service calculations. A "typical" weekday constitutes a Tuesday, Wednesday or Thursday and refers to a non-holiday condition when local schools are in session. Information concerning cumulative projects (planned and/or approved) in the vicinity of the proposed Project has been researched at the City of Costa Mesa and the City of Newport Beach. Based on our research, there are seven (7) cumulative projects located in the City of Costa Mesa and one (1) cumulative project located in the City of Newport Beach. These eight (8) cumulative projects were considered in the cumulative traffic analysis for this project.

This traffic report satisfies the traffic impact requirements of the City of Costa Mesa and is consistent with the most current *Congestion Management Program (CMP) for Orange County*. This traffic report analyzes existing and future weekday AM peak hour and PM peak hour traffic conditions for a near-term (Year 2024) traffic setting upon completion of the proposed Project. Peak hour traffic forecasts for the Year 2024 horizon year have been projected by increasing existing (2013 and 2015) traffic volumes by an annual growth rate of one percent (1.0%) per year and adding traffic volumes generated by eight (8) cumulative projects.

1.2 Study Area

A total of thirty five (35) locations, which are all located within the City of Costa Mesa have been selected for evaluation based on review of the existing transportation system surrounding the proposed Project site. Of this total, twenty (20) locations are arterial street signalized intersections, four (4) locations are arterial street/project access point signalized intersections and eleven (11) locations (includes the one proposed project driveway along Adams Avenue) are project access point unsignalized intersections. The thirty five (35) locations listed below provide regional and local access to the study area and define the extent of the boundaries for this traffic impact investigation.

Key Study Intersections

1. Harbor Boulevard at Gisler Avenue
2. Harbor Boulevard at Baker Street
3. Harbor Boulevard at Adams Avenue
4. Harbor Boulevard at Merrimac Way
5. Harbor Boulevard at Fair Drive
6. Pinecreek Drive/S Street at Adams Avenue
7. Fairview Road at I-405 NB Ramps
8. Fairview Road at I-405 SB Ramps
9. Fairview Road at Baker Street
10. Fairview Rd at Adams Ave/El Camino Dr
11. Fairview Road at Monitor Way
12. Fairview Rd at Pirate Way/Mustang Way
13. Fairview Road at Arlington Drive
14. Fairview Road at Merrimac Way
15. Fairview Road at Fair Drive
16. Lot C Driveway at Merrimac Way
17. Lot D Driveway at Merrimac Way
18. Lot D Dwy (Right-In/Out Only) at Merrimac Way
19. Lot D Dwy (Right-In/Out Only) at Merrimac Way
20. Lot E Driveway at Merrimac Way
21. Lot E Driveway (Right-In/Out Only) at Merrimac Way
22. Lot E Driveway/Church Driveway at Merrimac Way
23. Lot E Driveway (Right-In/Out Only) at Merrimac Way
24. Recycling Center Driveway No. 1 at Adams Avenue
25. Recycling Center Driveway No. 2 at Adams Avenue
26. Placentia Avenue/Mesa Verde Drive at Adams Avenue
27. Harbor Boulevard at South Coast Drive
28. Harbor Boulevard at I-405 NB Ramps
29. Harbor Boulevard at I-405 SB Ramps
30. Harbor Boulevard at Victoria Street
31. Fairview Road at South Coast Drive
32. Bear Street at Baker Street
33. Newport Boulevard at SR-55 SB Ramps/Fair Drive
34. Newport Blvd/SR-55 NB Ramps at Fair Drive/Del Mar Ave
35. Project Dwy (near student housing component) at Adams Ave

Figure 1-1 presents a Vicinity Map, which illustrates the general location of the Project and depicts the study locations and surrounding street system. The Volume-Capacity (V/C) and Level of Service (LOS) investigations at these key locations were used to evaluate the potential traffic-related impacts associated with area growth, cumulative projects and the proposed Project. When necessary, this report recommends intersection improvements that may be required to accommodate future traffic volumes and restore/maintain an acceptable Level of Service, and/or mitigates the impact of the project.

Included in this Traffic Impact Analysis are:

- Existing traffic counts,
- Estimated project traffic generation/distribution/assignment,
- Estimated cumulative project traffic generation/distribution/assignment,
- AM and PM peak hour capacity analyses for existing conditions,
- AM and PM peak hour capacity analyses for existing plus project conditions,
- AM and PM peak hour capacity analyses for future near-term (Year 2024) traffic conditions without and with the proposed Project,
- Caltrans Evaluation at applicable locations,
- Recommended Improvements,
- Focused Saturday Evaluation,
- Intersection Queuing Evaluation, and
- Parking Structure Evaluation.

FIGURE 1–1

VICINITY MAP

ORANGE COAST COLLEGE VISION 2020 FACILITIES MASTER PLAN, COSTA MESA

2.0 PROJECT DESCRIPTION

The approximately 160-acre project site is generally located west of Fairview Road between Adams Avenue and Merrimac Way in the City of Costa Mesa, California. ***Figure 2-1*** presents an aerial depiction of the existing site.

Figure 2-2 presents the proposed site plan for the proposed Project, which shows the locations of the proposed renovations and new construction. As shown, the proposed Project will consist of the construction of new campus facilities and the renovation of existing campus facilities to meet the District's instructional needs and to accommodate growth in the student body over the planning horizon and beyond for in-district students and out-of-district students. In addition to the new and/or renovated instructional space, the proposed Project will also consist of the construction of on-campus student housing, the construction of a mixed-use development consisting of conference/education office space, retail and/or food uses, an expansion/renovation to the existing recycling center and the construction of a new parking structure.

In order to facilitate the development of trip generation forecasts for the proposed Project, the aforementioned project description has been divided amongst four categories. These four categories consist of development related to 1) student growth; 2) the on-campus student housing project; 3) the mixed-use development project and 4) the recycling center expansion project. All project components are expected to be completed by the Year 2024. The following describes each of the four categories in detail.

Student Growth

Orange Coast College has a current baseline student enrollment of 21,410 students. As stated above, the renovation of existing campus facilities and the construction of new campus facilities, including the proposed parking structure to be located on a portion of the Adams parking lot are required to meet the District's instructional needs and to accommodate growth in the student body for in-district students and out-of-district students. At completion of the Master Plan, Orange Coast College is projected to accommodate a future student enrollment of 28,332 students, resulting in a net increase of 6,922 students.

Student Housing

As shown in *Figure 2-2*, the on-campus student housing project component will be generally located on the southwest corner of the intersection of Pinecreek Drive/S Street and Adams Avenue in the northwest corner of campus. The on-campus student housing project component will consist of 818 beds.

Mixed-Use Development

As shown in *Figure 2-2*, the mixed-use development project component will be generally located on the northwest corner of the intersection of Fairview Road and Merrimac Way in the southeast corner of campus. The mixed-use development project component will consist of 89,000 SF of conference/education office space and up to 15,000 SF of retail/fast-casual restaurant space.

Recycling Center Expansion

The recycling center currently exists on the north end of the campus between the athletic fields, with two access points currently provided along Adams Avenue (i.e. one inbound only driveway and one outbound only driveway). As shown in *Figure 2-2,* the recycling center will remain in its current location; however it will be expanded for the purposes of accommodating recycling demand in the City of Costa Mesa. The expanded facility will provide a greater area for visitors to drop off recyclable materials at designated areas, provide more parking for patrons, provide a greater area for equipment storage and provide an area for outdoor instructional space. Access to the expanded facility will remain unchanged with one inbound only driveway and one outbound only driveway to be provided along Adams Avenue. A deceleration lane will also be provided along Adams Avenue at the inbound only driveway. At completion of the proposed recycling center expansion, it is expected that the site would collect triple the amount of waste that is currently collected at the existing facility, thus resulting in triple the amount of visitors to the expanded site.

2.1 Site Access

Vehicular access to the campus would continue to be provided from Adams Avenue, Fairview Road and Merrimac Way. The vehicular entries from Monitor Way, Pirate Way and Arlington Drive would be enhanced with the addition of formal gateways and marked pedestrian drop-off points. The primary entry into Lot E off of Merrimac Way would also be enhanced. A new right-turn in/right-turn out only driveway would also be provided along Adams Avenue, located on the west end of the campus, near the proposed student housing project component (study location #35).

FIGURE 2–1

EXISTING SITE AERIAL

ORANGE COAST COLLEGE VISION 2020 FACILITIES MASTER PLAN, COSTA MESA

3.0 EXISTING CONDITIONS

3.1 Existing Street System

The principal local network of streets serving the project site are Harbor Boulevard, Fairview Road, Adams Avenue and Merrimac Way. The following discussion provides a brief synopsis of these key area streets. The descriptions are based on an inventory of existing roadway conditions.

Harbor Boulevard is an eight-lane, divided roadway between Gisler Avenue and Baker Street, a seven-lane, divided roadway between Baker Street and Adams Avenue and a six-lane, divided roadway south of Adams Avenue, oriented in the north-south direction. The posted speed limit on Harbor Boulevard is 40 miles per hour (mph). On-street parking is generally not permitted along this roadway in the vicinity of the project. Traffic signals control the study intersections of Harbor Boulevard at South Coast Drive, the I-405 NB Ramps, the I-405 SB Ramps, Gisler Avenue, Baker Street, Adams Avenue, Merrimac Way, Fair Drive and Victoria Street.

Fairview Road is generally a six-lane, divided roadway, oriented in the north-south direction. Fairview Road borders the project site to the east and currently provides access to the site via Monitor Way, Pirate Way and Arlington Drive. The posted speed limit on Fairview Road is 40 mph. On-street parking is generally not permitted along this roadway in the vicinity of the project. Traffic signals control the study intersections of Fairview Road at South Coast Drive, the I-405 NB Ramps, the I-405 SB Ramps, Baker Street, Adams Avenue/El Camino Drive, Monitor Way, Pirate Way/Mustang Way, Arlington Drive, Merrimac Way and Fair Drive.

Adams Avenue is a six-lane, divided roadway between Placentia Avenue/Mesa Verde Drive and Pinecreek Drive/S Street and a five-lane, divided roadway between Pinecreek Drive/S Street and Fairview Road, oriented in the east-west direction. Adams Avenue borders the project site to the north and currently provides access to the site via S Street. Access to the recycling center is also provided via one inbound only driveway and one outbound only driveway along Adams Avenue. The posted speed limit on Adams Avenue is 40 mph. On-street parking is generally not permitted along this roadway between Placentia Avenue/Mesa Verde Drive and Pinecreek Drive/S Street. Between Pinecreek Drive/S Street and Fairview Road, on-street parking is permitted on the north side of the street and not permitted on the south side of the street. Traffic signals control the study intersections of Adams Avenue at Placentia Avenue/Mesa Verde Drive, Harbor Boulevard, Pinecreek Drive/S Street and Fairview Road.

Merrimac Way is generally a four-lane, divided roadway, oriented in the east-west direction. Merrimac Way borders the project site to the south and currently provides access to the site via eight unsignalized driveways. The posted speed limit on Merrimac Way is 35 mph. On-street parking is generally not permitted along this roadway in the vicinity of the project. Traffic signals control the study intersections of Merrimac Way at Harbor Boulevard and Fairview Road.

Figure 3-1 presents an inventory of the existing roadway conditions for the arterials and intersections evaluated in this report. This figure identifies the number of travel lanes for key arterials, as well as intersection configurations and controls for the key area study intersections. Please note that this figure, as well as all other subsequent figures contain an “A sheet” and a “B sheet”.

3.2 Existing Traffic Volumes

Thirty-five (35) key study intersections (including one proposed project driveway along Adams Avenue in the vicinity of the proposed student housing component), have been identified as the locations at which to evaluate existing and future traffic operating conditions. Some portion of potential project-related traffic will pass through each of these intersections, and their analysis will reveal the expected relative impacts of the project. Existing AM peak hour and PM peak hour traffic volumes for the key study intersections evaluated in this report were obtained from manual turning movement counts conducted by Transportation Studies Inc. in October 2013, November 2013, January 2015 and February 2015. Since the campus driveways/access points are included in the list of intersections where traffic data was collected, the traffic data at these locations was utilized to establish the existing daily, AM Peak hour and PM peak hour trip generation for the campus. The existing trip generation represents an existing baseline enrollment of 21,410 students. Traffic counts/observations were also conducted at the existing recycling center in February 2014 to help establish the recycling centers existing daily, AM peak hour and PM peak hour trip generation.

Figures 3-2 and ***3-3*** illustrate the existing AM and PM peak hour traffic volumes at the key study intersections evaluated in this report, respectively. ***Appendix A*** contains the detailed peak hour count sheets for the key intersections evaluated in this report and contains a summary of the existing daily, AM peak hour and PM peak hour trip generation for the campus. *Appendix A* also contains a summary of the recycling center counts/observations.

3.3 Existing Intersection Conditions

Existing AM and PM peak hour operating conditions for the key study intersections were evaluated using the *Intersection Capacity Utilization* (ICU) methodology for signalized intersections and the methodology outlined in Chapter 17 of the *Highway Capacity Manual 2000* (HCM2000) for unsignalized intersections.

3.3.1 *Intersection Capacity Utilization (ICU) Method of Analysis*

In conformance with City of Costa Mesa and Orange County CMP requirements, existing AM and PM peak hour operating conditions for the key signalized study intersections were evaluated using the Intersection Capacity Utilization (ICU) method. The ICU technique is intended for signalized intersection analysis and estimates the volume to capacity (V/C) relationship for an intersection based on the individual V/C ratios for key conflicting traffic movements. The ICU numerical value represents the percent signal (green) time, and thus capacity, required by existing and/or future traffic. It should be noted that the ICU methodology assumes uniform traffic distribution per intersection approach lane and optimal signal timing.

FIGURE 3–3B

EXISTING PM PEAK HOUR TRAFFIC VOLUMES

ORANGE COAST COLLEGE VISION 2020 FACILITIES MASTER PLAN, COSTA MESA

Per City of Costa Mesa requirements, the ICU calculations use a lane capacity of 1,600 vph for left-turn lanes, through lanes and right-turn lanes. The City of Costa Mesa does make adjustments for clearance intervals since the assumed lane capacity reflects the effect of lost time.

The ICU value translates to a Level of Service (LOS) estimate, which is a relative measure of the intersection performance. The ICU value is the sum of the critical volume to capacity ratios at an intersection; it is not intended to be indicative of the LOS of each of the individual turning movements. The six qualitative categories of Level of Service have been defined along with the corresponding ICU value range and are shown in ***Table 3-1***.

3.3.2 *Highway Capacity Manual (HCM) Method of Analysis (Unsignalized Intersections)*

The 2000 HCM unsignalized methodology for stop-controlled intersections was utilized for the analysis of the unsignalized intersections. This methodology estimates the average control delay for each of the subject movements and determines the level of service for each movement. For all-way stop controlled intersections, the overall average control delay measured in seconds per vehicle, and level of service is then calculated for the entire intersection. For one-way and two-way stop-controlled (minor street stop-controlled) intersections, this methodology estimates the worst side street delay, measured in seconds per vehicle and determines the level of service for that approach. The HCM control delay value translates to a Level of Service (LOS) estimate, which is a relative measure of the intersection performance. The six qualitative categories of Level of Service have been defined along with the corresponding HCM control delay value range, as shown in ***Table 3-2***.

3.3.3 *Level of Service Criteria*

According to City of Costa Mesa criteria, LOS D (ICU = 0.801 – 0.900) is the minimum acceptable condition that should be maintained during the morning and evening peak commute hours.

3.4 Existing Level of Service Results

Table 3-3 summarizes the existing peak hour service level calculations for the thirty five (35) key study intersections based on existing traffic volumes and current street geometrics. Review of *Table 3-3* indicates that all key study intersections currently operate at an acceptable service level during the AM and PM peak hours.

It should be noted that *Table 3-3* presents two sets of existing level of service results for the intersection of Harbor Boulevard/Adams Avenue (i.e. without and with recently installed improvements that were identified as part of the Harbor Boulevard/Adams Avenue Intersection Widening Project). As shown in *Table 3-3,* without the recently installed improvements, the intersection of Harbor Boulevard/Adams Avenue operated at LOS B during the AM peak hour and LOS D during the PM peak hour. With the recently installed improvements, the intersection of Harbor Boulevard/Adams Avenue operates at LOS B during the AM peak hour and LOS C during the PM peak hour.

Appendix B presents the ICU/LOS and HCM/LOS calculation worksheets for the key study intersections for the AM peak hour and PM peak hour.

TABLE 3-1

LEVEL OF SERVICE CRITERIA FOR SIGNALIZED INTERSECTIONS

Level of Service (LOS)	Intersection Capacity Utilization Value (V/C)	Level of Service Description
A	≤ 0.600	EXCELLENT. No vehicle waits longer than one red light, and no approach phase is fully used.
B	0.601 – 0.700	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.
C	0.701 – 0.800	GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles.
D	0.801 – 0.900	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups.
E	0.901 – 1.000	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.
F	> 1.000	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Potentially very long delays with continuously increasing queue lengths.

TABLE 3-2

LEVEL OF SERVICE CRITERIA FOR UNSIGNALIZED INTERSECTIONS[1]

Level of Service (LOS)	Highway Capacity Manual Delay Value (sec/veh)	Level of Service Description
A	≤ 10.0	Little or no delay
B	> 10.0 and ≤ 15.0	Short traffic delays
C	> 15.0 and ≤ 25.0	Average traffic delays
D	> 25.0 and ≤ 35.0	Long traffic delays
E	> 35.0 and ≤ 50.0	Very long traffic delays
F	> 50.0	Severe congestion

4.0 TRAFFIC FORECASTING METHODOLOGY

In order to estimate the traffic impact characteristics of the proposed Project, a multi-step process has been utilized. The first step is traffic generation, which estimates the total arriving and departing traffic on a peak hour and daily basis. The traffic generation potential is forecast by applying the appropriate vehicle trip generation equations or rates to the project development tabulation.

The second step of the forecasting process is traffic distribution, which identifies the origins and destinations of inbound and outbound project traffic. These origins and destinations are typically based on demographics and existing/expected future travel patterns in the study area.

The third step is traffic assignment, which involves the allocation of project traffic to study area streets and intersections. Traffic assignment is typically based on minimization of travel time, which may or may not involve the shortest route, depending on prevailing operating conditions and travel speeds. Traffic distribution patterns are indicated by general percentage orientation, while traffic assignment allocates specific volume forecasts to individual roadway links and intersection turning movements throughout the study area.

With the forecasting process complete and project traffic assignments developed, the impact of the proposed project is isolated by comparing operational (LOS) conditions at selected key intersections using expected future traffic volumes with and without forecast project traffic. The need for site-specific and/or cumulative local area traffic improvements can then be evaluated and the significance of the project's impacts identified.

5.0 PROJECT TRAFFIC CHARACTERISTICS

5.1 Project Traffic Generation

Traffic generation is expressed in vehicle trip ends, defined as one-way vehicular movements, either entering or exiting the generating land use. Generation equations and/or rates used in the traffic forecasting procedure are typically found in the 9th Edition of *Trip Generation*, published by the Institute of Transportation Engineers (ITE) [Washington D.C., 2012].

Table 5-1 summarizes the trip generation rates used in forecasting the vehicular trips generated by the four components of the proposed Project (i.e. student growth, student housing, mixed use development and recycling center expansion). As shown, the trip generation potential of the student growth project component was estimated using the empirical rates developed from the existing driveway counts for an existing baseline enrollment of 21,410 students (refer to *Appendix A* and the footnotes within *Table 5-1* for specific details on the development of the trip rates). The trip generation potential of the mixed use development project component was estimated using ITE Land Use 710: General Office Building trip rates and ITE Land Use 820: Shopping Center trip equations.

For the student housing project component, ITE Land Use 220: Apartment trip rates were considered, however they were deemed not applicable to the proposed student housing project component, as use of apartment trip rates would significantly overstate the project trips. Based on our understanding of the project description, the proposed student housing project will function similar to that of a college dormitory or an on-campus apartment and will only be available to students attending Orange Coast College. Residents of the student housing project component would be located on campus and therefore trips associated with any school activities would likely be walk-based trips. The only trips that need to be accounted for with this project component would be non-school related trips (i.e. student work trips, etc.). To develop the non-school related trips associated with the student housing project component, student housing empirical rates developed as part of the *Chapman University Residence Center Project Traffic Impact Study*, prepared by LLG Irvine (March 2007) were utilized. The *Chapman University Residence Center* rates are deemed more appropriate for use as they fit the description of the proposed student housing project and will correctly forecast the non-school related trips.

The trip generation potential of the recycling center expansion project component will be based on the existing daily and peak hour trip generation data collected at the existing facility, with a multiplier applied to the existing data to account for the trips associated with the expanded facility. Based on information provided by campus staff, at completion of the proposed recycling center expansion, it is expected that the site would collect triple the amount of waste that is currently collected at the existing facility, thus resulting in triple the amount of visitors to the expanded site. Therefore, a multiplier of 3 will be utilized to account for the trips associated with the expanded facility.

TABLE 5-1
PROJECT TRAFFIC GENERATION RATES[2]

Project Description	Daily 2-Way	AM Peak Hour Enter	AM Peak Hour Exit	AM Peak Hour Total	PM Peak Hour Enter	PM Peak Hour Exit	PM Peak Hour Total
Student Growth							
▪ OCC Empirical Rate (TE/Student)[3]	1.271	0.107	0.018	0.125	0.076	0.065	0.141
Mixed Use Development							
▪ 710: General Office Building (TE/1,000 SF)	11.03	1.37	0.19	1.56	0.25	1.24	1.49
▪ 820: Shopping Center (TE/1,000 SF)[4]	131.93	2.00	1.27	3.27	5.40	5.80	11.20
Student Housing							
▪ Student Housing Empirical Rate (TE/Bed)[5]	2.38	0.04	0.03	0.07	0.06	0.09	0.15
Recycling Center Expansion							
▪ Existing Recycling Center Trip Generation[6]	494	5	5	10	30	30	60
➢ Proposed Expansion (3 Times Existing Trips)							

2 Unless otherwise noted, Source: *Trip Generation*, 9th Edition, Institute of Transportation Engineers (ITE), Washington, D.C. (2012).

3 The trip generation rates for the student growth project component were developed based on existing daily, AM peak hour and PM peak hour traffic counts collected at the Orange Coast College driveways in October 2013. The traffic counts revealed that on a typical weekday, the Orange Coast College campus generates 27,203 daily trips, 2,669 AM peak hour trips (2,290 inbound, 379 outbound) and 3,016 PM peak hour trips (1,626 inbound, 1,390 outbound). The aforementioned trips where then divided by the existing number of students (i.e. 21,410 students) to determine the daily, AM peak hour and PM peak hour rates per student.

4 The trip generation rates are based on the following equations.
- Daily: LN (T) = 0.65 LN(X) + 5.83; 50% Enter and 50% Exit
- AM Peak Hour: LN (T) = 0.61 LN(X) + 2.24; 62% Enter and 38% Exit
- PM Peak Hour: LN (T) = 0.67 LN (X) + 3.31, 48% Enter and 52% Exit
